MACK

"THE MIGHTY MOTOR"

4 and 5 H. P. Single—Interchangeable
7 and 9 H. P. Twin—Interchangeable

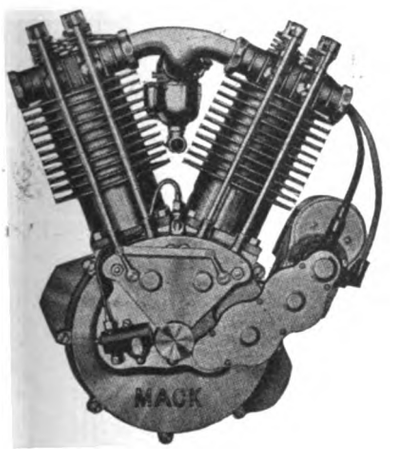
Relentless, invincible, all-conquering POWER.

Absolute silence.

Remarkable flexibility.

All parts absolutely interchangeable.

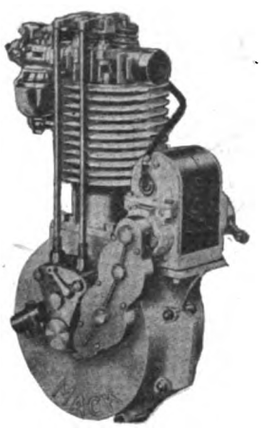
Perfect cooling insured by overhead valves and especially large cooling flanges.



Isn't that your conception of an ideal motor? Isn't that what you have been waiting and hoping for? Well, that's the

MACK

"The Mighty Motor"



We make no rash assertions for the MACK MOTOR. All we claim is that from the standpoint of Power, Silence, Flexibility, Durability and "sweet" cool vibrationless action, the MACK is as highly developed as twenty years of gas engine experience, coupled with unusual designing skill can possibly achieve.

Read carefully the description of the MACK given here. We feel confident it will open your eyes.

DESCRIPTION

Mack motors are made of drop-forged special alloy steel, the same material as used in the most powerful automobile motors. Imported annular ball bearings support the crank shaft. Aluminum crank case absolutely oil tight. High nickel finish on cylinder and small parts. Every part on MACK motors is micrometrically measured and all parts are interchangeable.

Unexcelled power is afforded by overhead valves, preventing overheating and assuring a sufficiency of reserve power on all occasions. Positive mechanical oil pump, delivering oil direct to proper places. No valves to become dirt clogged.

We are considering 1914 specifications NOW.

STANDARD CANOE MODEL
$65.00

Majestic Sidecars

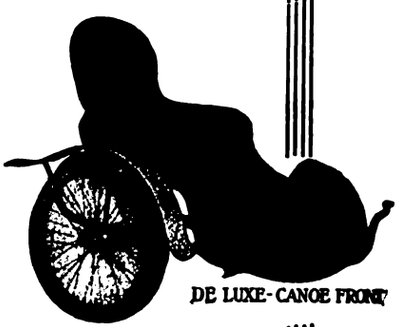
First on the market

Start your Spring Touring right! Get a MAJESTIC Sidecar, the king of all "sociables." The MAJESTIC line offers the widest variety from which to select. But there is not a "freaky" model among them. They are different shapes of bodies designed to meet different requirements and are the result of our ripened experience as the oldest manufacturers of sidecars in America. This experience has taught us what NOT to do in the building of sidecars. Hence, you will find incorporated in MAJESTIC sidecars every comfort-insuring, every life-prolonging characteristic that can possibly be contained in the truly ideal sidecar, without an undesirable feature.

Still first on the road

TRINITY MODEL
$75.00

Majestic Sidecars are constructed with drop-forged steel fittings—exclusively



DE LUXE-CANOE FRONT
$90.00

Do not underestimate the importance of this statement. It means that MAJESTIC SIDECARS will stand up under the worst road conditions—that they absolutely MUST be immune from any and all breakdowns due to weak construction. The MAJESTIC Sidecar offers the most in COMFORT with its luxurious springs, of four flexible leaves of chrome vanadium steel, its substantial body, its high luxurious back, its storm apron and foot mat.

The "Trinity" is for the whole family and has a detachable child's seat. The "Standard" and "Standard Canoe" are high-class cars at popular prices. We make special attachments for spring frame Indians.

Every dealer will find a ready demand for MAJESTIC Sidecars. The unexampled reputation of the MAJESTIC coupled with its undeniable beauty, strength and comfort makes it a "self seller." Write for our handsome catalog.

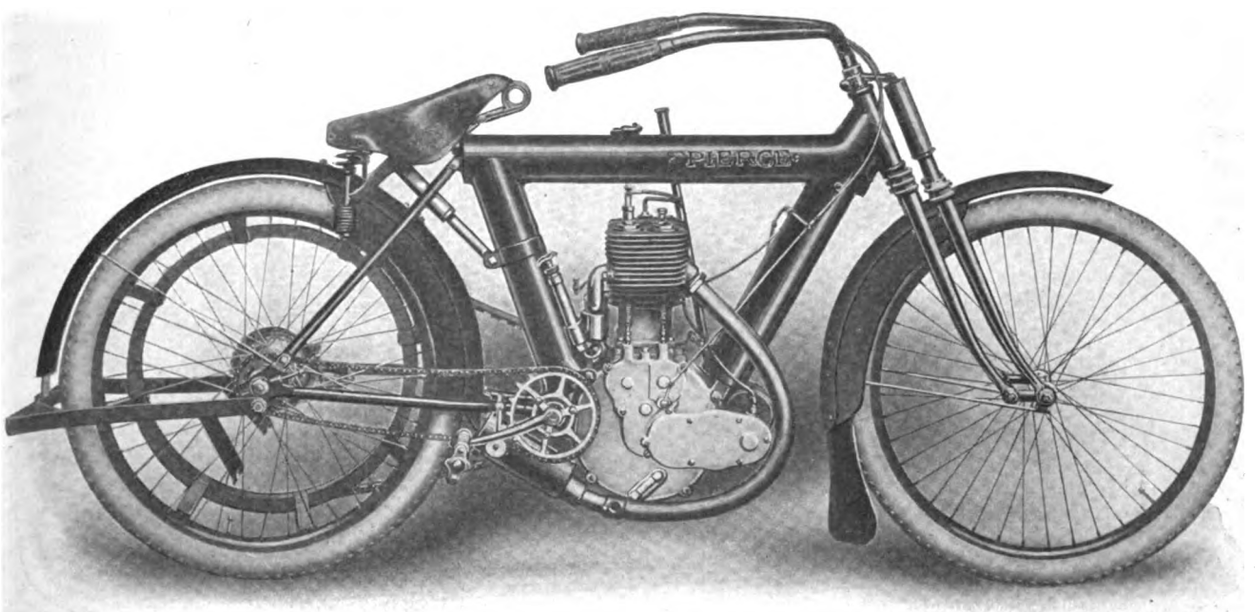
PIERCE

EVERY ITEM IN THE MAKE UP OF

PIERCE MOTORCYCLES

SIGNIFIES

QUALITY—STRENGTH—DURABILITY



Front Wheel— Knock Out Front Axle. 40 Spokes, 2¾" Tires.

Cushion Fork— Long compression spring with heavy rebound spring, working in brass cartridges.

Rigid Forks— Triple Crown. Stem from solid bar stock, taper drilled. Joined to Cushion Fork with drop forged ball bearing arms. (Exclusive feature.)

Frame— 3½" 18-gauge tubing, with hand-lapped joints. Frame also acts as gasoline and oil tank. Head fittings turned from solid bar stock.

Engine— 3½ x 4". 5 Horse Power. Mechanical Valves of large diameter and heavy stems. Push rods adjustable. Three large Roller Bearings which cost many times more than the ordinary bronze.

Magneto— Berling—The sensation of the season. It will throw a firing spark at less than 75 revolutions per minute.

Spring Seat— Made up similar to Cushion Fork, with long spring working in brass cartridges.

Mud Guards— Heavy Steel—Rolled Edge—Rear Guard hinged.

Rear Wheel— 40 Spokes—Corbin Hubs—2¾" Tires.

Finish— Four Coats finest baked enamel, either red or black. Nickel Plating best ever put on a motorcycle.

Call upon the nearest dealer or write for agency proposition if the PIERCE is not represented in your section.

SPLITDORF

"Always There"

The new SPLITDORF MAGNETOS "have the punch" to get you anywhere under every condition of travel.

"A hotter spark at slower speed than any other make of magneto" is a SPLITDORF boast and a SPLITDORF quality—as certain as Time.

The verdict of the National Shows, when the instruments made their first appearance, was unanimously in their favor.

Compact and staunchly built they "looked the goods" and the wiseacres were not slow in bestowing their approval on the attractive newcomers to the extent of equipment and dealers' orders.

And now the voice of the user—the **real** voice of approval, after all—is being heard in a manner not to be mistaken.

It is a SPLITDORF YEAR! Racer and road-plugger—casual and inveterate tourist—it is all the same. SPLITDORF MAGNETOS do, and always will, give you the "firing punch" your machine needs. Insist upon an equipment!

"Front View E U Magneto

"New ignition for old" is a special exchange proposition of great interest to every owner of a gasoline motor that is not equipped with SPLITDORF up-to-the-minute ignition. Save time and money and write or call for particulars today.

The New Carburetion Method—

MONDEX-HELIX *in combination with any Carburetor*

REDUCES GASOLINE BILLS 25 TO 40%

Try it on your motor and be convinced! But *beware* of imitations! There is positively *nothing* like the Mondex-Helix for carburetting the air with liquid fuel and keeping the carburetting *constant*—thus *increasing* power and flexibility, with a minimum amount of fuel—almost *doubling* the efficiency of low-grade gasoline or kerosene, and at the same time insuring a *steadier* and *smoother* pull.

The Mondex-Helix is the *only* device of its kind that is scientifically perfect and automatic in its action, yet made without any revolving, moving or complicated parts—requiring no attention whatever, and which cannot get out of order. Also it is the *only* device of its kind that may be installed quickly and easily *without* cutting piping, drilling or making any alterations in your machine.

Simply insert it in the intake of manifold like a cartridge in a gun—that's all!—and the Mondex-Helix will accomplish all and more than we claim for it.

The Mondex-Helix is used and indorsed everywhere where efficiency and economy find consideration.

It is an insurance against back-firing. It eliminates carbonization troubles, because every particle of live gas, in passing through the Mondex-Helix, is so thoroughly disintegrated and mixed as to make *perfect combustion* an *absolute certainty*.

It allows quick starting. It makes a noisy or "knocking" motor *silent* and *smooth*. It reduces the tendency to over-heating and *prolongs* the life of a motor to an almost indefinite extent.

Send in your order at once if your dealer cannot supply you. Let us send you our Booklet R.

When ordering, Address Dept. R, giving make, model of motor or inside diameter of intake manifold. Sent with full instructions, C. O. D. or by mail on receipt of price.

Sizes, 1 inch to 1½ inches $3

Sizes, 1⅝ inches to 2 inches $4

BOWDENISM

The Science of Simple Control

—

We feel a particular gratification in the fact that our earliest conviction with regard to the control of motor cars, motor cycles and aeroplanes—that they would eventually be controlled from the steering wheel and handle-bar through flexible wires—has come true.

During the early days of pioneer work the inestimable advantages of Bowden Wire control were so palpable to us that we steadily and confidently persisted, and from the moment when manufacturers began to adopt our method, up to the present time of its universality, it has been our pleasure to supply to the trade, and to the public, every fitment pertaining to these controls.

Trade and public will readily appreciate the value to themselves of these years of concentration and experience.

"Going to Work!"

"I've got Diamond Safety Tread Tires—and you can't beat them"

It's the *tire* on which you must depend for quick turns, speeding over slippery paving, crossing car tracks and to meet the unexpected emergencies that confront you daily as a motorcycle rider. So you cannot be too careful in the selection of the tires upon which your safety and easy-riding comfort depend.

That's why you should take advantage of the safety and more mileage features of

Diamond

Safety Tread (Squeegee) Motorcycle Tires

Made of Vitalized Rubber—with Perfect 3-Point Rim Contact

You can now get for your motorcycle the same identical tire that has solved the skid and "More Mileage" problem for automobilists.

The "More Mileage Strip" in the Safety Tread is built on top of and in addition to the regular tread—it assures you of more mileage and longer service at *no additional cost.*

Ask your nearest dealer for new Diamond Motorcycle Tire Catalog.

So this time buy Diamond Vitalized Rubber Motorcycle Tires—you can get them to fit your rims from

Diamond Dealers Everywhere

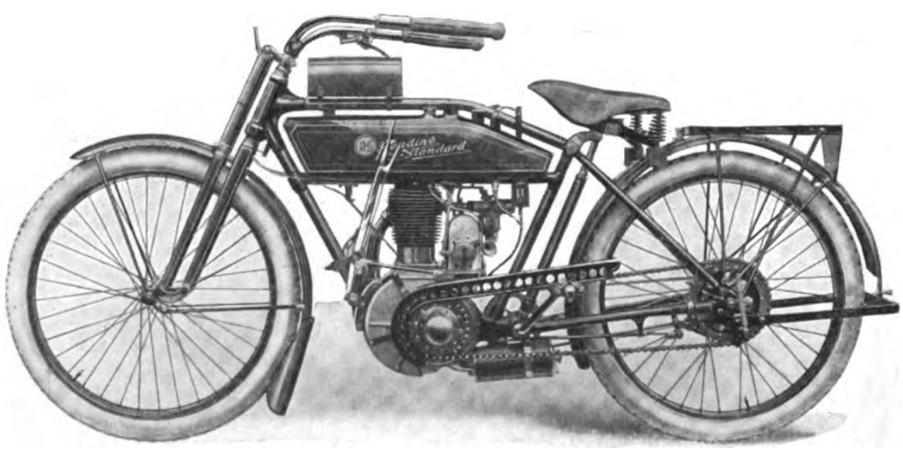
S E R

True service in a motorcycle implies many things. It means RELIABILITY under every condition—which in turn indicates the presence of STRENGTH, SIMPLICITY, DURABILITY, POWER and COMFORT. Upon the strength of these features rests the real service a motorcycle renders. In no other motorcycle has the main issue of service been so clearly and consistently kept in mind as in the building of the

R-S

Every piece of material entering into the construction of the R-S is chosen for its service giving qualities. Nothing about the R-S is left to chance.

The R-S is a well-balanced motorcycle. It is not over-developed in one part, under-developed in another. It is a composite of perfectly equalized and harmonious units, each a "star" in its class, but all working together to attain the ultimate aim—FLAWLESS SERVICE.



READING-STANDARD CO.

Mott Steel Rims Insure Longer Service

ROAD conditions in America are different than in any other country. They are good, bad and indifferent. Generally bad. On rocky, rutty roads the rims are necessarily subjected to considerable punishment.

The wise manufacturer gives careful consideration to this important feature of motorcycle construction. He knows that to cut costs by using rims other than

Mott Steel Rims

is to invite dissatisfaction and possible cancellations.

Use **Mott Steel Rims.** They are strong—elastic. They are made in an enormous plant devoted exclusively to the manufacture of steel rims.

SIMPLEX

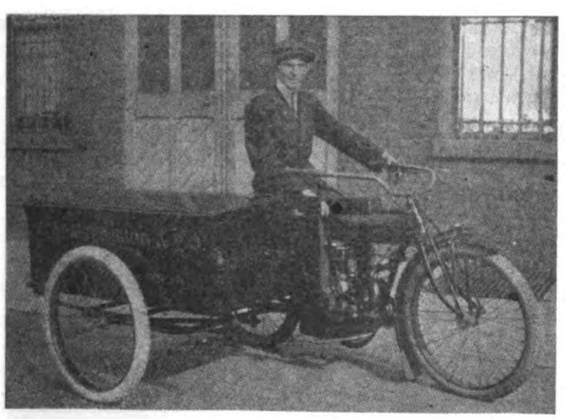
SIDE CARS AND DELIVERY VANS

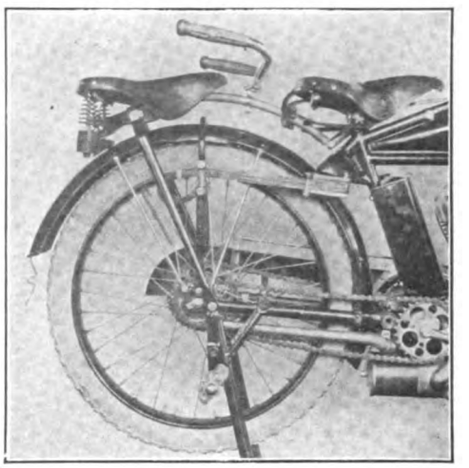
We can, without exaggeration, claim the greatest improvements in side car construction yet attained. The "SIMPLEX" with its graceful, pleasing lines, its deep, rich upholstery, comfortable and roomy interior and reinforced frame, render it the nearest approach to absolute perfection in side cars—we have stepped clear and wide of the ordinary "canal boat" construction. They have—all of them—striven for years to attain the goal we have reached. The car speaks for itself—we "beat them to it."

SIMPLEX DELIVERY VANS

are now in use by leading merchants and have proven far in excess of their expectations as to lightness, adaptability to all conditions and strength. Made to fit all makes of motorcycles.

SIMPLEX MACHINE WORKS
274 Forty-fourth Street BROOKLYN, N. Y.





Model A. Patent Pending.

Mueller Tandem Attachments

To Fit All Indian Motorcycles

None can deny that the very appearance of the Mueller Tandem attachment is indicative of sturdy strength, comfort and "class." And your eyes do not deceive you. There is positively no device on the market that has half the comfort, convenience and strength of the Mueller Tandem attachment. It has absolutely all the comfort of the motorcycle saddle itself. There is nothing about the Mueller Tandem attachment to get out of order. Absence of complicated parts is the rule. Note the strong simplicity of the models shown here.

MODEL A

Model A attachment is for the 1913 spring frame machine and does not interfere with frame action. Attachment is made of steel tubing and drop forgings, well brazed—enameled and nickeled. Large Troxel motorcycle saddle, Kelly adjustable handle bars, standard No. 3 pedals. Enameled red to match motorcycle.

MODEL B

Model B attachment will fit all rigid frames fitted with luggage carrier bosses. Also made with curved tube to attach on forward seat post when desired. Colors: red, blue or green.

Riders!

You MUST learn more about the Mueller Tandem attachment before you are a day older. You cannot afford to be without this "extra motorcycle." You must straddle a Mueller Tandem attachment to appreciate what true comfort means. Get our catalog today.

Dealers!

If any line you are handling today is not as lively as you would wish, it is up to you to get rid of it and stock only live lines. A careful reading of our catalog, copy of which will be sent you upon request, will convince you of the desirability of stocking the MUELLER TANDEM ATTACHMENT.

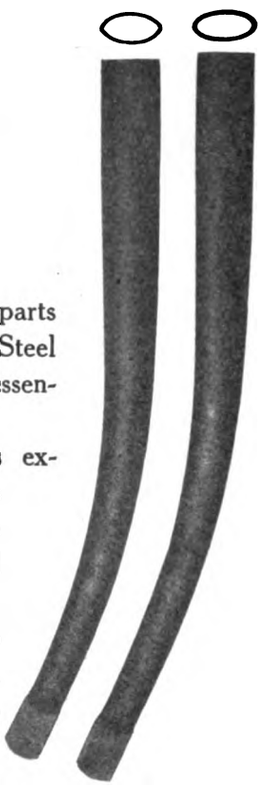
Frame Parts *for* Motorcycles

MADE *of*

Standard Tubing

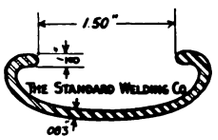


MOTORCYCLE frame-parts made of Standard Steel Tubing have all the qualities essential to safety and endurance.

Standard Steel Tubing is exceptionally strong. It has sufficient spring to give the frame proper resiliency, and the owner an enjoyable ride. It has sufficient rigidness to eliminate destructive vibration and friction of parts, and to give the rider a feeling of security.

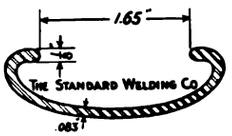
The frames of nearly every make of American Motorcycle are built of Standard Steel Tubing.

B. B MOTOR CYCLE RIM FOR 2¼" AND 2½" TIRES



Standard Steel Motorcycle Rims

C-C. MOTOR CYCLE RIM FOR 2¾" AND 3" TIRES



We carry a large and complete stock of Standard Motorcycle rims—all sizes and types.

Standard Motorcycle Rims are made of an extra quality of steel. They are rolled to a perfect circle. The surfaces on which the tire bears are smooth and clean. The dimensions are in absolute accordance with tire sizes, thereby assuring minimum wear from a source where most tire difficulties arise.

Punchings for spoke-holes are made as required—the work being done by automatic machines—which guarantees accuracy.

We also carry a full line of bicycle frame-parts and rims. *Write for prices.*

Price $12.50 complete.

THE RIGHT TANDEM AT THE RIGHT PRICE FOR THE 1913 INDIAN

This tandem has a spring action of about SIX INCHES, provided by long, coil springs enclosed in steel tubes. Cushion is curved in the fore part, which gives a very comfortable position. Has a very flexible action and for COMFORT, DURABILITY and APPEARANCE it outclasses many of the higher priced tandems. No side sway. Folding handle bars, lock securely in either the raised or lowered position. If your dealer does not handle these tandems, send us a money order for $12.50, and we will ship one of these tandems to you express prepaid, complete with handle bars, cushion and tool box attachment. Tandem is enameled Indian red. Dealers, write for our proposition.

The STAR LUGGAGE CARRIER
Is Built for Heavy Duty

For the rider who wants to carry an excessively heavy weight behind the saddle, the Star Luggage Carrier fills the bill.

Scientifically constructed of steel, heavily re-enforced at points of wear, the Star can withstand considerably over 300 lbs. weight. For tandem riding the spring action makes it an exceedingly comfortable seat.

The Star is handled by the leading jobbers in America. Write us.

STAR ELECTRIC CO., - 18 No. May St., Chicago, Ill.

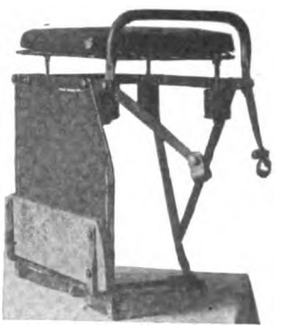
Our Regular Model.
Patented Apr. 2, 1912. No. 1,057,661.

The New Improved OSBORNE Tandem Attachment and Luggage Carrier

The first rear seat and luggage carrier to meet, absolutely, every requirement of the motorcyclist. Minimum Price, Maximum Quality mean Satisfaction—the kind our tandem attachment gives. Rides like an Automobile. Smooth as an Aeroplane.

"HEY, FELLOWS, it's the one that girl loves to ride on." Orders to date for 1913 models exceed our entire output of 1912. This proves that this is worth investigating, Mr. Dealer. You can't lose out on our proposition. Sell one, then sell some more. Be sure to write for our 1913 circular, it will interest you.



Our Regular Model with Running Board Folded.

OUR REGULAR MODEL—A dandy for the Harley-Davidson, Excelsior, Yale, Thor, Dayton, Curtiss, etc. Note that this is not a combination affair, but a practical, desirable, indestructible, attractive, convenient and easy riding rear seat. Designed especially for carrying the lady by reason of its easy riding qualities. Mounted securely on four large coil springs which take up all jars. Each attachment furnished with leather cushion and skirt guard. No special motorcycle clothing necessary, no extra power as in use of side or fore car.

OUR REGULAR MODEL WITH RUNNING BOARD FOLDED up when not in use. Extra running board may be attached on opposite side for carrying suit case or Prest-O-Lite tank. Both boards fold up. DEALERS, this is a **real seller** to increase your bank account. Price, $12; extra running board, ready to attach, $4.

Our 1911-12 Indian Model.

OUR 1911-12 INDIAN MODEL—Proved so popular in 1912 we were unable to supply the demand for it. We are shipping large numbers of them this season. Carried in stock at all times. Special model for the 1912 T. T. Indian. Also special model for 1913 Indian.

Special models of our Attachments for 1913 Indians, Henderson 4, Pope and Merkel. Dealers, write.

Manufactured by **J. A. Osborne Mfg. Co.,** **Hammondsport New York**

Standard

In Name and Quality

Never has there been a truer saying than the time-worn old adage, "It's the little things that count." And it is the degree of attention paid to these "little things," that determines oftimes the success or failure of a machine to "get across."

Wise manufacturers are equipping with Diamond "E" Spokes and Standard Pedals because they are quality goods—because they reduce the number of repair shop trips for the rider—because farsighted manufacturers realize that a motorcycle's weakest points are its strongest—and it is that infinite attention to detail which bespeaks perfection.

The dealer who looks ahead will stock heavily with Standard Pedals and Diamond "E" Spokes and Nipples. The motorcycles that are not so equipped will inevitably come to his shop for replacements and it is up to him to sustain his reputation for high-grade repair work by fitting Standard parts.

Everyone knows the superiority of Standard No. 3 Pedals, their deep, soft rubber cushions, the interchangeability of the rubbers, and the thousand and one other good features that are not found in other pedals. The feet cannot slip no matter how rough the going. And the perfection of Diamond "E" Spokes is proverbial.

The Standard Company

Torrington - Conn.

The Dazzler—A Real Non-Skid Tread

Dazzling indeed in its aggregation of service insuring features is this new arrival in the Kokomo group.

Note the distinctive studs. Your eyes give you the most convincing testimony as to their efficiency as skid and side-slip preventatives. Your common sense tells you that it would be impossible to find a more effective tread. And give your close attention to the seven alternating layers of thick white rubber and heavy Sea Island cotton. Can you find anywhere a more efficient, business-like tire? (Chorus) NO!

Send for our catalog. It tells the whole story.

KOKOMO RUBBER COMPANY, KOKOMO, IND.

Auburn
Spark Plug

Tourists, learn from those who have suffered. Follow the example of your fellow riders and equip with the Auburn Spark Plug.

Its perfect insulation, its unfailing reliability at all times precludes the necessity of carrying a number of reserve plugs in your kit.

The AUBURN SPARK PLUG has the largest combustion chamber of any spark plug on the market.

The thousands of testimonial letters we have on file at this office are ample proof of our claims. They have been substantiated to the satisfaction of the most skeptical.

Our leaflet, covering our line of motorcycle spark plugs and also citing a few testimonial letters of more than ordinary significance, will be sent upon receipt of your name and address.

NEW YORK MICA & MFG. CO.
AUBURN, N. Y.

THE ACME SIREN

"The Little Horn With the Enormous Range"

The marvellous carrying power, the impressive distinction of the tone—a low, vibrant growl growing into a shrieking, whining snarl and then dying away into silence—the sturdy, compact appearance,—these features place the Acme Siren in the front rank of motorcycle noisemakers.

Its tone carries its danger message through all other noises. It is not a "pretty" sound. It sounds like business. It invariably gets quick action. It **always** works.

The ACME SIREN is made of heavy gauge brass, with a bulb of exceptionally durable Para Rubber. It is absolutely positive in operation. No wires or batteries to get out of order. No mechanism to break at the critical moment. Just a horn, bulb and revolving reed. A handsome, unique and durable warning signal.

Price, $5.00

Looking for solid, substantial tandom ccmfort? Stop this way, ploaso!

Don't let's argue on the subject. You know what you want in a tandem seat and we're not going to try to tell you that you want something else. That would be foolish. Likewise unnecessary. Because the Katzmann Eazy Ride Seat is just what you want. It is supremely comfortable. It is extremely easy and simple of adjustment. And most vitally important of all, it costs less—much less—than any other attachment on the market.

KATZMANN Eazy Ride Seat "MAKES RIDING A TREAT"

Once try this luxurious seat and you will wonder how you ever did without it.

Comfortable and Convenient

The Katzmann Eazy Ride Seat fits any luggage carrier. It is easy to put on and take off. It has no complicated fittings to get out of order. It gives the utmost in velvety smoothness of action without the fragility of more complicated, easy-to-get-out-of-order fittings. We feel safe in saying what every rider's common sense should tell him to be true—a strong, rigid luggage carrier, with an upholstered spring seat is the logical tandem seat, in point of both comfort and low cost.

Tremendously Strong

The Katzmann Eazy Ride Seat must give perfect, enduring service, because it is made right of the proper materials. Genuine springs, extra long oil tempered, are arranged in special swivel truss frame of our own. Each spring is allowed to work separately, but at the same time holding its alignment. Five inch upholstery, with special arrangement of springs assuring absence of bulging in the sides. Made of ⅝" veneer. We positively and unconditionally guarantee the Katzmann Eazy Ride Seat for one year from date of sale.

Made In Three Grades

Style "A" Grade, Genuine Leather Top.....$3.50
Style "B" Grade, Good Serviceable Imitation Leather 2.50
Style "C" Grade, Best Grade Katzmann Leather.... 2.00

If You Are Going to Buy a Tandem

Get posted. We want you to compare The Luxett, pictured here, with any other Tandem on the market. Consider:

FIRST: The safety of your passenger depends upon a few bolts, nuts and strips of iron. Before you buy be sure of the strength. Nothing but materials which tests have shown to be best adapted for this work are used in The Luxett.

SECOND: His—or her—comfort depends upon the spring arrangement governing the seat post. We use what we term a "lifting-jack" which causes the seat to actually float. Just think, absolutely no rebound no matter what the roads. Just a smooth, gliding, undulating motion under the worst condition. Add to this the comfort obtained from a big, roomy Mesinger Saddle. Truly, it rides like a Pullman.

THIRD: Your comfort, and the efficiency of your machine, depends largely on the proper distribution of the weight behind you. We throw the weight 4" ahead of the axle, forcing the front wheel to take its share of the load, and, what is more important, reducing side sway and consequent "spills" to a minimum.

FOURTH: Owing to the fact that we are 4" ahead of the axle, and within an eighth of an inch from the mud-guard, we obtain the very lowest saddle position possible.

FIFTH: The Luxett is heavily nickeled and polished; is graceful and sturdy in appearance and design, and adds—rather than detracts—to the beauty of the machine.

If your dealer does not handle The Luxett, send us $15.00 or if handle bars are wanted, $16.50 and it will be sent you at once.

DEALERS: Get our proposition. It will be of interest to you.

PAT. PENDING

Think what this advertisement is introducing. A practical gasolene filter that filters the gasolene as it is used. A neat little device highly nickel plated. It attaches to the tank nipple simply by using a wrench. No alterations have to be made to attach it. Easily cleaned. Guaranteed not to check the flow of gasolene.

Will absolutely stop all carbureter trouble due to clogging with sediments, tank scales, dirt or any other foreign matter. By using this filter the carbureter is always supplied with pure, clean gasolene which means a good mixture. With a good mixture you will have a smooth running motor, giving more power and speed. If you do not use this filter your carbureter is liable to clog at any time causing the motor to miss, and in most cases to stop. A stop of this kind is often very puzzling and is not overcome until the carbureter is taken off and cleaned. Avoid all this trouble by putting on one of these filters in time. It will do for you what it is doing for others. In ordering give name of your machine. Agents wanted. Dealers write for discounts.

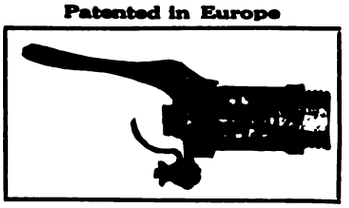
STEVENS & CO.

375 Broadway, NEW YORK

IF THE M&M ECONOMIZER COULD TALK WE WOULD NOT HAVE TO ADVERTISE

Patented in Europe



Patented in America

The M&M is positively guaranteed to save from 40 to 50% of gasoline, and increase the speed and power 20% with less gasoline and less carbon. With the throttle set at twelve miles per hour, by opening the M&M your mileage will be increased to eighteen or twenty miles, WITH THE SAME AMOUNT OF GASOLINE, and LESS CARBON.

The M&M is the only known carbureter adjuster on the market, and can be used for priming the engine. Do not throw your old carbureter away until you have applied our device. THEN NOTICE RESULTS. The M&M is also one of the greatest carbon eliminators on the market, and also acts in the capacity of an air-brake. In fact, IT IS BECOMING THE RAGE IN MOTORCYCLISTS' REALM.

The M&M can be successfully applied to any motorcycle on the market. It requires a ¼" pipe tap to insert into manifold, but can be reduced to ⅛" if necessary. It is made with one valve and six portholes, which admit auxiliary air into the manifold, and will give you that uniform mixture which is ABSOLUTELY NECESSARY in order to obtain SPEED and POWER. The M&M is nickel plated and highly polished.

HOW ABOUT THIS LETTER!

Milwaukee, Wisconsin, No. 842 30th Street, April 22d, '13.

Moller Bros., Phila., Penna.

Gentlemen:—I have placed an M&M Economizer on my 9 h. p. DE LUXE Motorcycle, and have found it to be a great success in more than one way. By opening the M&M, I can increase my speed 15 miles per hour or more. It also gives me more power in climbing hills. I find it is a great saver of gasoline, and the money saved on gasoline would pay for the M&M in a very short time. With the magneto cut off, I can use my engine as a brake, by leaving the compression on, and at the same time cool off my engine, by absorbing in cool air. I believe the M&M will work just as well on a smaller horse power engine, and I am sure that any rider would be as well pleased with it as I am. Yours very truly, JAMES A. STEWART.

WE GUARANTEE THE M&M TO DO JUST WHAT WE CLAIM, or money will be refunded in 30 days. (Reference—Citizens National Bank, Lewistown, Pa.) No dealer or jobber is authorized to sell without giving our guarantee.

Send for our catalogue and information. **PRICE OF THE M&M ECONOMIZER—$1.25 PREPAID.** **BEWARE OF INFRINGEMENTS!**

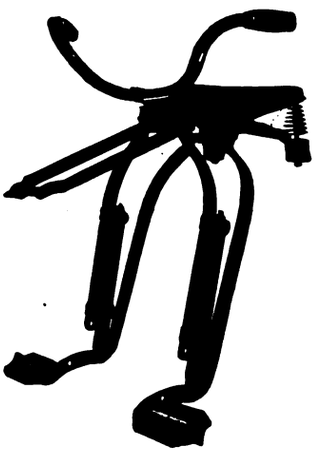
Simplicity—Comfort—Stability

The Empire Special

SPRING TANDEM



"IT FLOATS"

You wouldn't seriously consider purchasing a motorcycle that does not possess at least these three cardinal points. Then why permit a tandem attachment to be fitted on your machine, that has not proven to your complete satisfaction that it possesses these three characteristics in full measure? Here is

The Empire Special Spring Tandem

"IT FLOATS"

There is nothing about the Empire Special to get out of order. Simplicity is the keynote of its construction.

By a peculiar and ingenious invention, for which patents have been allowed, the Handle Bars and Pedals are caused to float with the saddle, insuring the maximum of comfort and smooth riding on the roughest of roads.

The famous Kelly No. 10 Adjustable Handle Bars are fitted on all Empire Specials.

Constructed of steel and no malleable parts, the Empire Special is practically indestructible.

Ask your dealer for our booklet. If he hasn't it, send us his name and you'll get one by return mail. The Empire's proof of superiority is in it.

Simplex Gauge on Excelsior.

Let Us Send You This Sight Glass Oil Gauge

——AT OUR EXPENSE——

Mr. Harley-Davidson rider! Mr. Excelsior rider, and all the other riders that have no oil gauge on the crankcase of their engine! We have so much faith in our oil gauge that we wish to send it to you at our expense so that you can see it yourself—and then you can decide whether you want one or not. We want you to see the finest crankcase gauge ever put on a motorcycle, a gauge that will show you EXACTLY how much oil you have in your engine ALL THE TIME, and will do what no other one will—IT WILL KEEP CLEAN. "8 out of 10 engines are Ruined for want of oil."

The gauge is handsomely nickel plated, an ornament to any machine, the size of a thin watch, only ⅛ of an inch thick. It screws firmly on the crankcase, is out of the way and won't jar or get knocked off. It will save its cost in oil in a few weeks. It will keep your plugs from fouling. After you have used it a week you would as soon be without your watch. It can be attached in ten minutes with the tools furnished. DO YOU KNOW THAT WHEN YOU PULL A SIDECAR YOU USE UP OIL ABOUT TWICE AS FAST AS USUAL? Better SEE the oil level and be sure!

Buck Sales Co., St. Louis. **The Simplex Gauge Saved This Rider's Engine!**

Gentlemen: The gauge works perfect and should be handled by all dealers. It has probably saved my machine, for when I opened outlet in crankcase I didn't have more than a gill of oil when I thought I had plenty. I had been relying on the pump, and after gauge was in place I found the pump was not working, hence the shortage. WM. H. MATCHETT, Matchett Printing Co., Washington, D. C.

YES

For All 1911, 1912 and 1913 Indian Motocycles, What?

The J & S Clutch Control. 3000 Satisfied Indian riders are now using the J & S Clutch Control.

WHY?

Because it's the only device that will positively keep your lever from slipping and at the same time make it work free and easy. When riding in heavy sand or mud or climbing rough hills at slow speed you want your Clutch to slip; to do this you push your Clutch lever slightly forward, but to make the lever stay without slipping or sliding back is almost impossible without the

J & S CLUTCH CONTROL

For it holds your lever n place. The secret of the J & S Clutch Control is the cork insert and the spring tension on same. The spring tension can be adjusted by a turn of a cap. Never wears out, never gets out of order. All live dealers are selling the J & S Clutch Control, and it is the greatest seller ever put on the market, for we are getting duplicate orders every day.

$1.00 Postpaid

Mr. Dealer, better get our proposition. It's a good one.

Mr. Rider, if your dealer can't supply you, send us $1.00 and we will send you the J & S Clutch Control by return mail.

AMERICAN EXTRA MILEAGE Motorcycle Tires

Special Prices to Dealers and Riders Direct

Here is a tire that is A1 in every particular; an absolutely standard, carefully made, and guaranteed tire that will deliver a better service than any one you have ever used. We will make you, direct, special prices for the purpose of securing a trial order, which will be certain to land your permanent trade. Bear in mind that, in ordering of us, you take absolutely no risk, because if, when the tires reach you, they are not absolutely satisfactory

You Get Your Money Back!

And, after you accept the tires and put them in use, if they prove faulty (but they won't) you are protected by our guarantee.

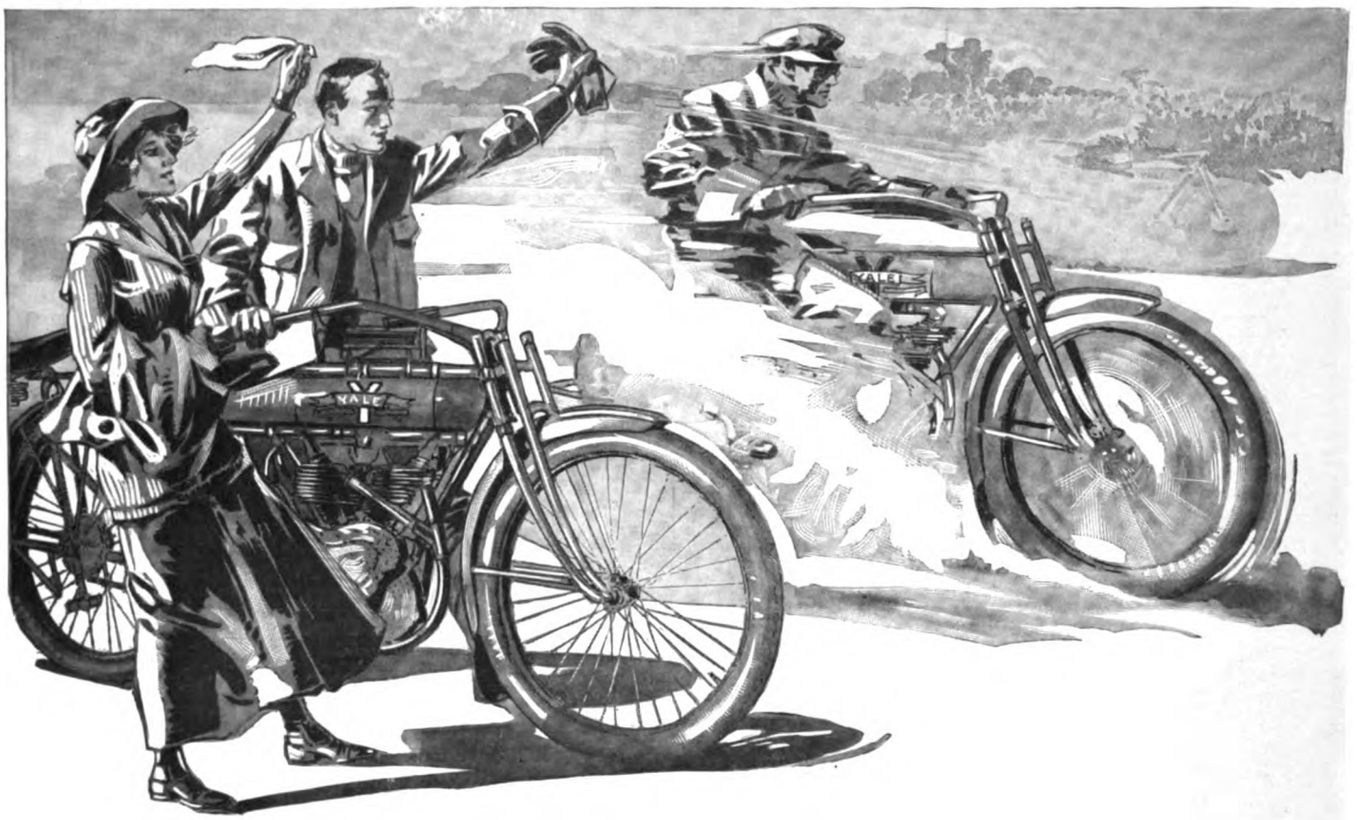
YALE WINS



THE big endurance contests of 1913 add still more victories to the long list of Yale winnings—winnings that have made the "Big Y" the National Road Champion.

Digitized by Google

YALE WINS

Again the Yale won decisively in the 200-mile reliability run of the Newark, N. J., Motorcycle Club, May 11. The handsome team trophy was taken by the Yale Squad, P. W. Stevens, George Riechey and O. W. Stevens, with 949 out of a possible 1000 points.

But that wasn't all! In addition to the team prize, the Yale won **first, second and third individual prizes** for consistent riding. Riechey earned the special gold medal, first prize, and his team mates took the other two individual awards. Yale consistency.

On May 17-18, Jacobs and Leander on their Yale twins went through the trying 24-hour 385-mile endurance contest of the Indiana F. A. M. and won perfect scores. There were 35 starters and only seven riders finished perfect. Three Yales started, all three went all around the course right on schedule, and two won perfect scores.

THE consistency that wins in this sort of competition—road contests under conditions met by the average rider between stock machines—insures satisfaction in ordinary use. A machine that wins against the best machines and most expert riders of other makes under conditions that bring out real ability, guarantee faithful, efficient, everyday service. Stay in the lead with a Yale.

Six Hundred Miles in 19 Hours

With Extra Passenger

on an Emblem

of Course

The EMBLEM, as usual, has established another startling road record. Through fierce drenching rainstorms, over roads practically washed out; over, under, through and around every imaginable road condition, the EMBLEM "Ten" with a total weight of 800 pounds made the run from Angola, N. Y., to Boston, Mass., a distance of a little more than six hundred miles, in the actual time of 19 hours! A truly marvelous performance, you say? Yes, but nothing unusual for the sturdy, powerful, economical, ever-reliable

EMBLEM

Endurance trials of this description are the real tests of a motorcycle's claims. Nothing can bring out with such merciless clarity the weak and strong points of a motorcycle as a test of the nature as detailed above. And in this worth-while field the EMBLEM has **always** reigned supreme.

Think of it! An average speed of over thirty miles an hour for nineteen consecutive hours of fierce "road bucking." If that test does not conclusively show absolute "class" in a motorcycle, what under the sun can? We leave it to the riders to judge.

Dealers—Performances like these help to keep the Emblem on the pinnacle of perfection in the eyes of the riding public. It is up to you to seize the advantage which undoubtedly will be afforded the EMBLEM dealer, and write us **today** for our proposition; tomorrow never comes.

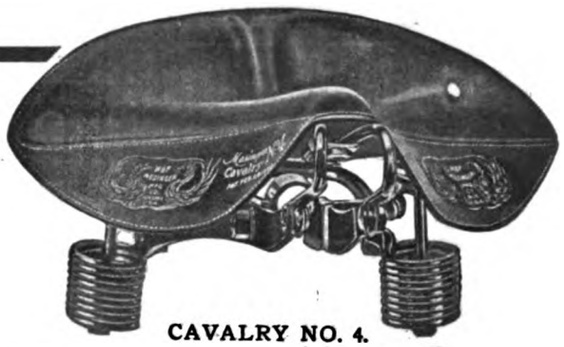
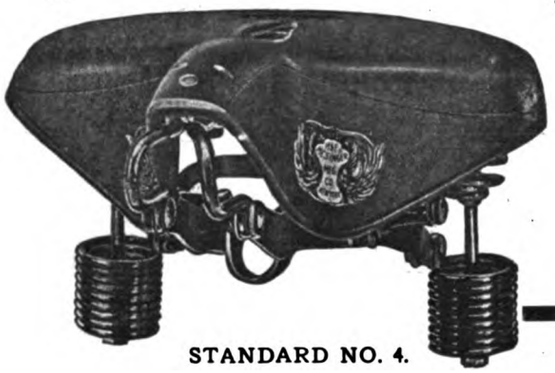
The Mesinger Saddle Not Only Satisfies---It Delights the Rider

The Mesinger Saddle is not merely negative in its service —that is, it is not simply a "satisfactory" saddle. It is more than that. By its ease of support, its clean, free play and its floating velvety movement it rises **above** the mediocre and becomes spectacular. In other words, the added comfort which the Mesinger gives causes comment on every side.



CAVALRY NO. 4.

THE MESINGER "SUPERBA"



STANDARD NO. 4.

And, from the durability standpoint also, the Mesinger Saddle is more than merely "good." A total absence of castings, leather of the highest grade and above all, keen and conscientious manufacturing methods make the Mesinger Saddle the peer of its class.

What's Your Particular Tire Complaint?

Punctures? Rim-cutting? Cracking of tire walls? Excessive wear on tread or walls? Only Continental-Erie tire users realize that these troubles are **not** to be borne with patience and resignation, as "necessary evils." The marvelously accurate methods of construction plus materials whose durability and quality have been proven by years of study, research and actual **road experience** makes for an absolute absence of tire troubles in

Continental-Erie Tires

"The Tires of Greater Service"

Continental-Erie Tires have no spectacular track-racing records to their credit, and we are proud of it. But the hundreds and thousands of brilliant endurance records, transcontinental runs and other real tire tests have invariably brought out the "greater service" of Continental-Erie Tires. "ASK THE JOBBER, HE KNOWS."

NON-SLIP-LAG

To bring your belt up to the maximum of its efficiency and keep it there, Continental-Erie Non-Slip-Lag is the thing. It increases the life of the belt, prevents its tearing, cracking or stretching. It eliminates all slippage. Order a roll today from your dealer.

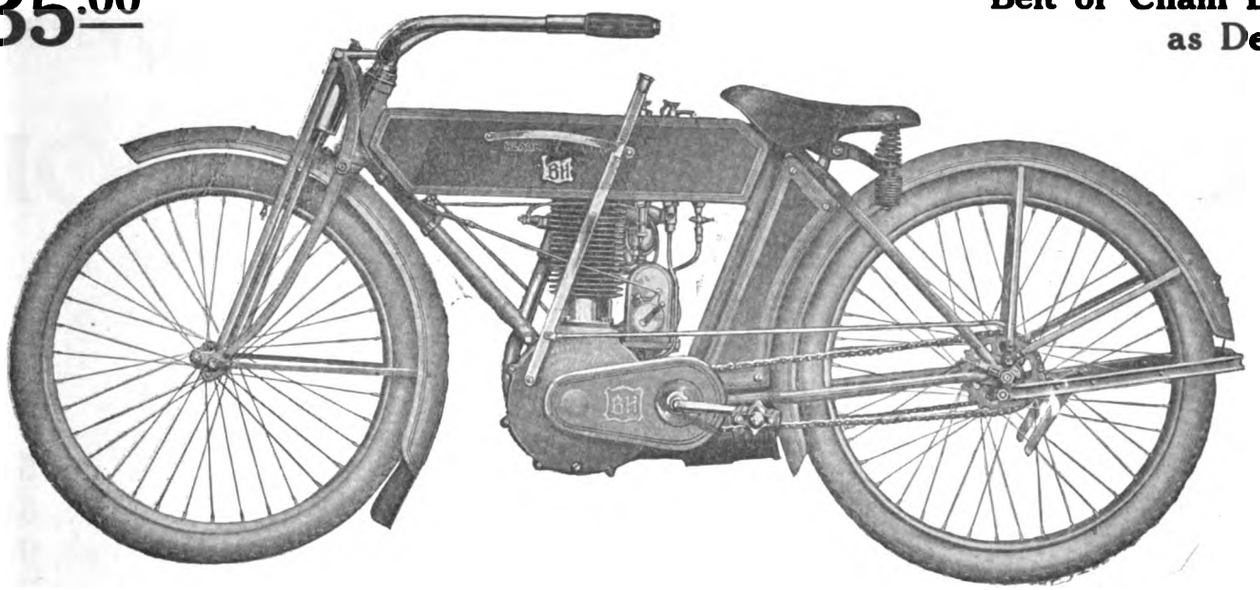
Belt or Chain Drive, as Desired



The "Dark Horse" In The 1913 Race For Motorcycle Sales Honors—

The "BLACK HAWK"

Astute motorcycle dealers—especially those who have been longest "in the game"—are hastening to secure the local agency for this new motorcycle that is justifying the predictions of the shrewdest veterans in motorcycledom. On its first appearance, just before New Year's, it was admitted by those most familiar with motorcycle history that here at last was "the last word in motorcycle perfection"—

The Most Perfect Specimen of Motorcycle Designing

This new motorcycle is breaking **all** first-year sales records. Wise motorcycle salesmen—those who **know** motorcycle superiority—are getting aboard the "BLACK HAWK" agency band wagon. How about you?
If you are a "live wire," between us we can make "the sparks fly." Send for catalog.

Black Hawk Motor Company

Dept. B. Rock Island, Ill.

Four Of The Reasons Why The BLACK HAWK Is Forging Ahead In Motorcycle Sales

NEXT-TO-NO VIBRATION. The fly-wheels are almost as accurately balanced as a main spring of a watch and made with maximum weight in rims, so that energy is stored in the fly-wheel rims to overcome the natural inertia at center when "speeding up" or hill climbing.

AUTOMATIC ANTI-CLOG OILER—Oil flows automatically, increasing with speed of machine and stopping when engine stops. Oil pump has only one moving part, making clogging, with consequent engine troubles and over-heating, impossible.

NEW WONDERFULLY EFFICIENT MUFFLER—Its worth proven 18 full months before being made a part of the Black Hawk. On all ordinary speeds hardly any noise at all, yet it entails only 2 per cent. loss in power as against 15 per cent. loss with the ordinary type muffler.

EASILY REMOVED AND REPAIRED TANK FITTINGS. In case of accident, tank fittings can easily be removed, and repaired or replaced on the road, since all fittings are put into tank with special compression method.

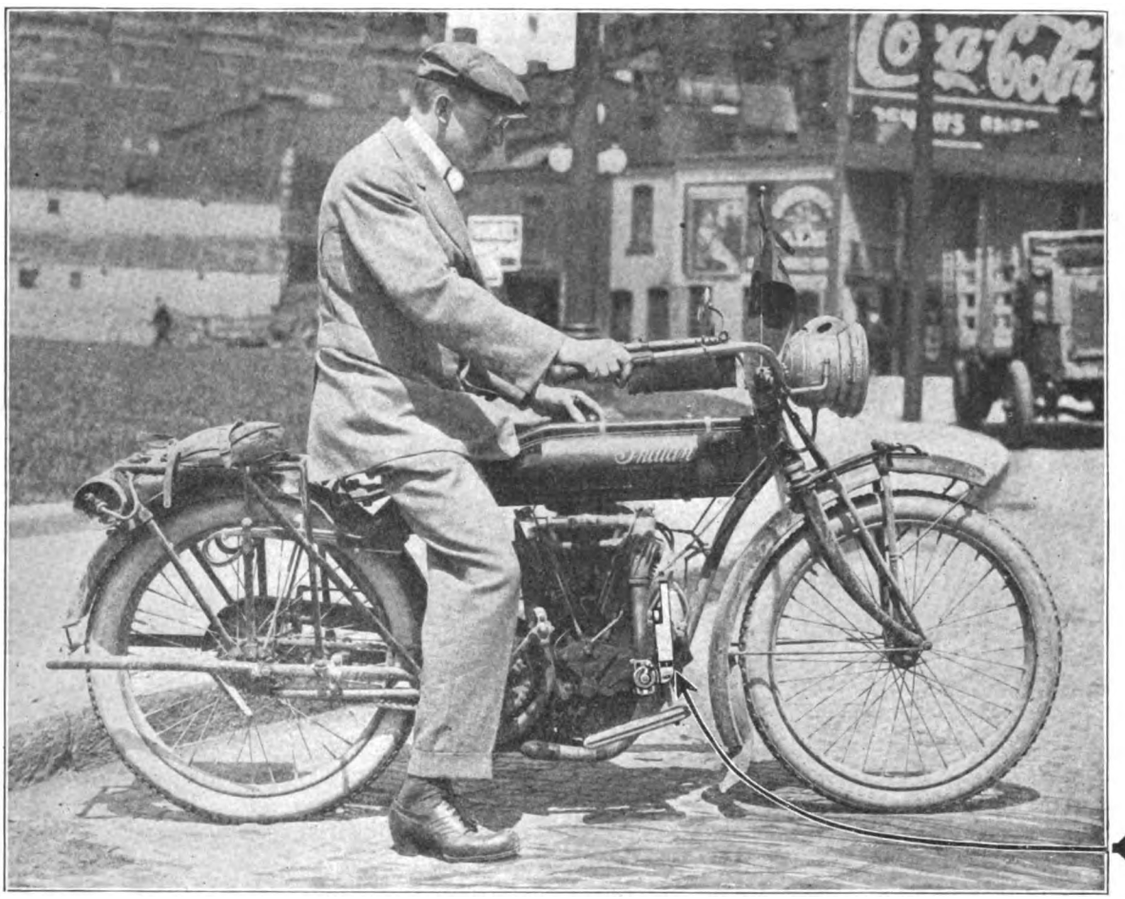
TRINITY CHIMES EXHAUST HORN

YOU CAN HEAR IT EVERYWHERE



THE MOTORCYCLE WARNING SIGNAL

Read what the Manager of the Motorcycle Department of H. R. Olmsted & Son, Syracuse, says about "Trinity Chimes":

"Syracuse, N. Y., May 10th, 1913.

"Gentlemen:—

"It may be of interest to you to know how well satisfied I am with 'Trinity Chimes.' I am glad I have at last found an exhaust horn that works every time I want it to. I use the horn constantly and it has never clogged up. Although I ride over all sorts of rough roads the vibration has never jarred it loose, and it has not been necessary for me to look it over. It is always on the job. Its warning is really pleasing to all who hear it and it certainly does clear the road. I am enclosing a photograph showing the horn attached to the motorcycle I am riding.

"Wishing you continued success, I am,

"Yours very truly,

"J. F. FYNMORE."

This is but one of the numerous testimonials we have received from satisfied riders and dealers all over the country.

—TO DEALERS—

"Trinity Chimes" is a money maker from a selling viewpoint. It is easily the biggest seller in the accessory line—it needs only to be heard. We SHIP—yes, ship—the goods immediately. That is more than a mere promise of delivery.

Exceptional Offer

To all dealers answering this advertisement we offer a Special Discount in addition to our regular proposition. It is more than a departure from our regular proposition, and it behooves all dealers to "go to it" NOW.

New Departure,—

The last one out and worth waiting for.

Riders are already asking Dealers about it.

It "looks good" to them.

It is exactly the same kind, type and design of a brake as is used in automobiles.

It is powerful enough to hold an automobile, or a motorcycle of several times the horse power of any now on the market.

It gives you everything the autoist has:—

Absolutely reliable control of your motorcycle under all conditions:—

A brake that will not wind, bind or lock:—

A slight back pedaling pressure will exert a retarding force of a ton and a half.

You surely want to know about this newest motorcycle device.

Write for fully illustrated and descriptive literature.

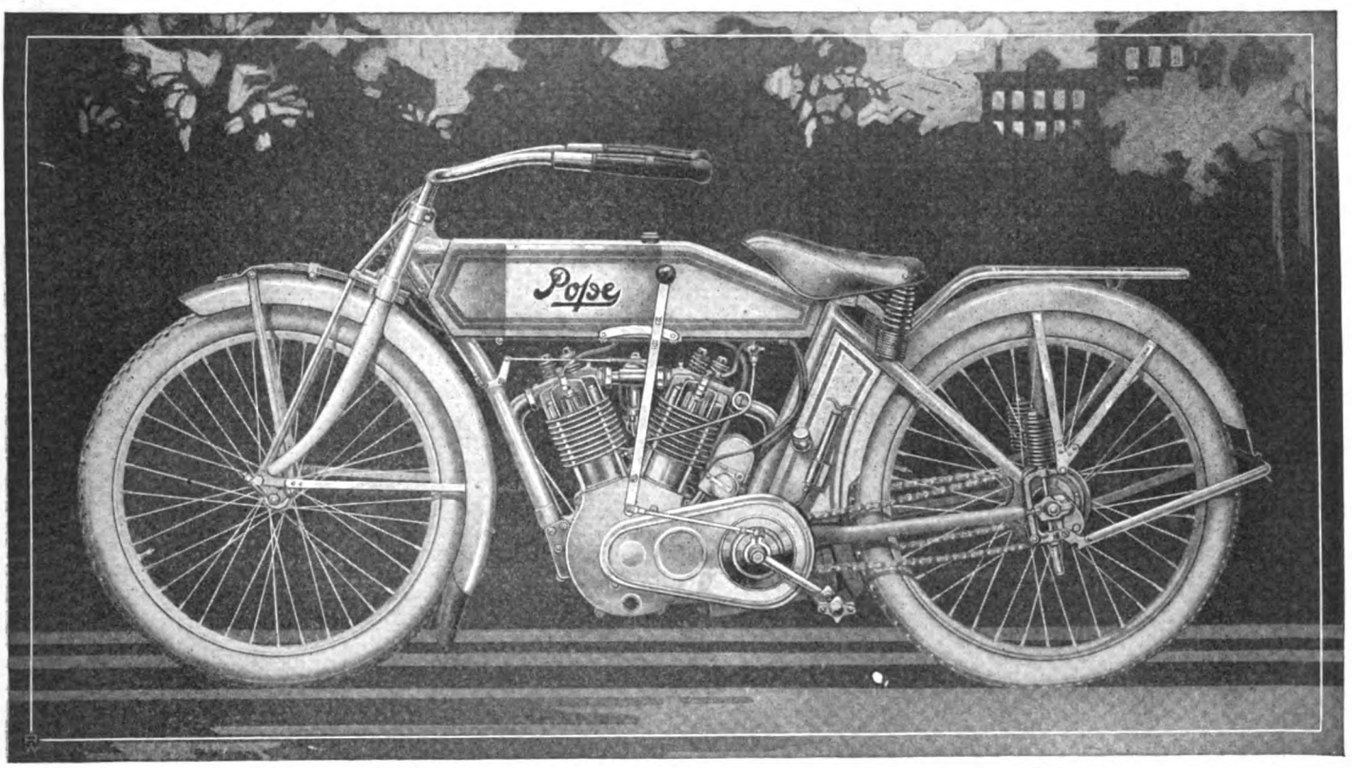
POPE
MOTORCYCLES

Helical Rear Spring Suspension—Spring Fork
Motor with Overhead Valves

RIDING COMFORT ALL THE TIME



Many rear cushion devices retard the speed. The Pope Rear Spring Suspension **assists** instead of retarding progress. The faster you go the more you will appreciate the new comfort features incorporated in Pope Motor Cycles. You can speed more comfortably on a Pope "Twin," or a Pope Model L, than you can on any other two-wheeled vehicle.

The Pope "Twin" holds the road like a big 6-cylinder automobile, wafting you along over any inequalities of the road with a wonderfully smooth, forward gliding motion. No matter how fast you travel, how far you go, or how bad the going, you are sure of riding comfortably all the time, with Pope Comfort Features. The Perfect Balance of Pope Motor Cycles also contributes greatly to the comfort of Pope riders.

OVERHEAD VALVES provides the greatest power and speed with the smoothest running qualities. The entire explosion being directly over the piston head, all energy is applied straight downward with full force.

"Pope Quality Has Never Been Questioned"

FOUR POPE MODELS—Model L, Twin Cylinder, 7-8 h. p., chain drive, Bosch Magneto, $250; Model M, 5 h. p., chain drive, Bosch Magneto, $215; Model K, 4 h. p., belt drive, imported magneto, $200; Model H, Lightweight, 4 h. p. belt drive, imported magneto, $165.

Perfect Scores for Two Pope "Twin" Machines.

Two Pope "Twins" were entered in the recent 200 mile Spring Run of Brooklyn, N. Y., Motorcycle Club, held over Long Island Course. **Both made perfect scores.** Pope riders were W. F. Steyborer and C. R. Burbank. The performance of Pope machines was the talk of the run.

Prest-O-Lite
For Motorcycles

The Light You Can Depend Upon

Half the pleasure you get from your machine comes after dark.

And good light is as important as tires.

Will you put your safety at the risk of some undependable lighting system?

Or will you use Prest-O-Lite?

It will cost no more to operate than carbide to feed a generator.

Worth Many Times It's Price

Don't consider the price you pay for Prest-O-Lite as money spent—but as an investment. Remember that a genuine Prest-O-Lite never becomes second-hand. It is in such universal use and demand that it can always be sold for about what you pay for it.

$10
With Gauge

30 Days Trial Free

We are so sure that you will find Prest-O-Lite indispensable that we make you this proposition.

Put a motorcycle Prest-O-Lite on your machine. Use it for thirty days and nights. Test it out on every kind of road, for city driving and country road work. Then if you find that you can do without it, the test won't cost you a cent. Can you afford not to make this trial?

Ask your Dealer or Write Us

The Prest-O-Lite Co. 246 East South St. Indianapolis, Indiana

Canadian General Offices and Factory, Merritton, Ont.

Exchange Agencies Everywhere

TO DEALERS:—There are five times as many motorcycle Prest-O-Lites in use today as there was one year ago. Are you getting your share of this business?

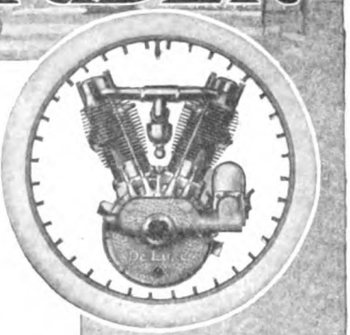
MR. MOTORCYCLE RIDER:



The joy of riding is enhanced when you ride a DE LUXE Motor equipped motorcycle.

Because there are four notable features of DE LUXE Motors:

SILENT CLEAN
FAST POWERFUL

SO SILENT—that you almost forget that you have a motor running under you. It is like riding in a Pullman.

SO FAST—that you can pull away in an instant from any of your companions, and stay ahead of them.

SO CLEAN—that when you return from a run, your motor may be covered with gray dust, but will not look as if it had not been cleaned for a month.

SO POWERFUL—that you can climb the steepest hills and pull through the deepest sand, where others walk.

DE LUXE Motors have done more than anything else to elevate motorcycling to the high plane where no apology is necessary for it.

You cannot afford to be without these advantages, so choose a DE LUXE Motor equipped motorcycle and be a year ahead of the others.

SPLITDORF

"Always There"

"YOU should worry" if your motorcycle is not equipped with SPLITDORF ignition.

The new SPLITDORF magnetos are the "one best bet" in the ignition field—they have been designed, and are being manufactured for the constant, hard usage of racer and road-plugger alike.

In appearance **you must not mistake them**—they're about as attractive as it's possible to make a mechanical contrivance.

In performance—the real test, after all—**you can't mistake them.** SPLITDORF MAGNETOS just make you master of the ignition situation under any call or stress of race or travel.

A sure, rich spark at top speed, or **as slowly as you can pedal the machine**—certain and always there when you want it—such is the SPLITDORF MAGNETO—the magneto you can always rely upon.

It is YOUR worry if you don't hitch on to the SPLITDORF tandem and demand a SPLITDORF MAGNETO with your standard, reliable SPLITDORF PLUGS.

"New ignition for old" is a special exchange proposition of great interest to every owner of a gasoline motor that is not equipped with SPLITDORF up-to-the-minute ignition. Save time and money and write or call for particulars today.

The Stewart

The only practical Motorcycle Speedometer made

The new two-belt front wheel drive of the Stewart is the only safe and practical motorcycle drive made. The instrument is mounted on the front extension spring or mud-guard. It cannot work loose. The steel and fibre pulleys cannot be thrown out of alignment. The coiled steel piano wire belts automatically adjust themselves to every vibration and road inequality. Unlike the impractical shaft drive, there are no gears to get out of mesh, nothing to become disconnected and tangle in the wheels.

$12
Complete

The Stewart is the only motorcycle speedometer made in which the shortcomings of flexible shaft drive have been eliminated. The new two-belt front wheel drive is simple, efficient, practical *and trouble-proof.* With this drive you are freed from the hardship and annoyances of broken links, inner coil friction, stripped gears, loose clamps, false mileage, noisy pinions and all the other difficulties encountered in the use of flexible shafting.

For sale by dealers all over the world.

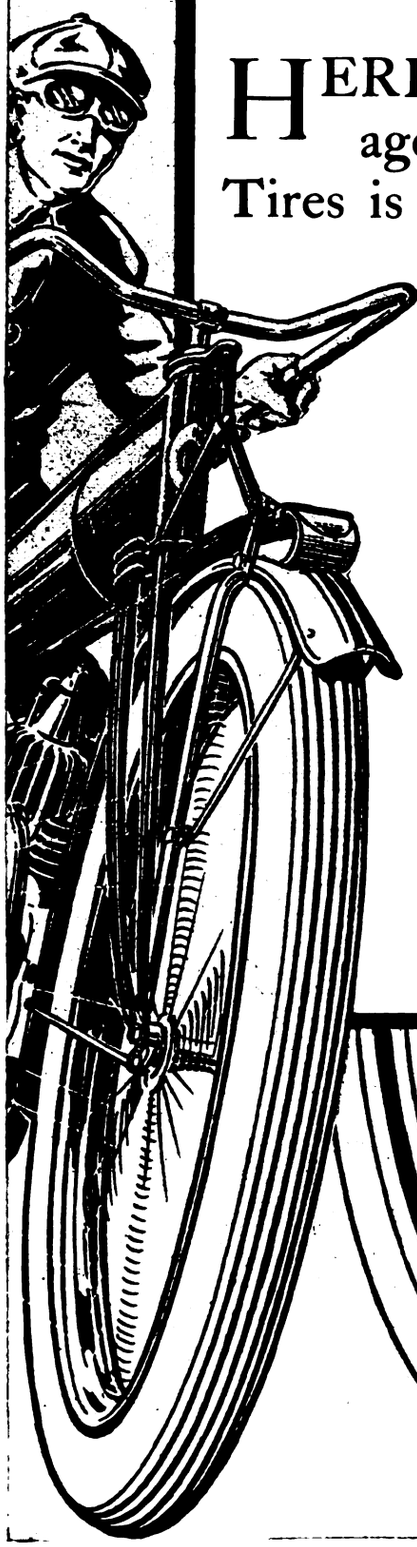
United States Tires

cut down tire bills



HERE is the reason: The average mileage yielded today by United States Tires is from 25 to 50 per cent greater than that given by any make of tires previous to the formation of the United States Tire Company two years ago.

Our own records prove this.

Every unprejudiced dealer and user in the country will admit it.

This radical increase in tire mileage comes as the logical result of combining into one tire all the best points of two famous makes.

Seattle Club Outlines a Plan for Consolidation

Pursuant to Recent Resolutions Favoring Merging of W. F. M. With F. A. M. Lively Northwest Organization Suggests Basis of Settlement in Detail—Director Sauer Resigns to Permit of Readjustment of F. A. M. Directorate.

REAL progress towards a settlement of the differences between the F. A. M. and the W. F. M. was made when, at a recent meeting, the Seattle Motorcycle Club adopted resolutions favoring a consolidation of the two organizations and stating the conditions under which, in the opinion of its members, the Seattle club favors the bringing about of this consolidation. Since his return from the Pacific Coast, Chairman Sauer, of the F. A. M.'s National Committee on Legal Action, has been in constant touch with various W. F. M. officials, to the end of effecting a solution of the problem along the lines he suggested at meetings which he addressed at Los Angeles, Bakersfield, San Jose, Portland, Tacoma and Seattle. As a result, the Seattle club has gone on record as favoring a consolidation provided, however, the F. A. M. can see its way clear to accept certain terms.

According to Chairman Sauer, the resolutions adopted by the Seattle club are in no way unreasonable, and he believes that it is only a matter of arranging the necessary details assuming, of course, that the W. F. M. membership in its entirety is disposed to take the same stand as have the boys in the Pacific Northwest. As Tacoma has returned to the F. A. M. fold and as at the meeting which Mr. Sauer addressed in Portland the vote of those present was unanimously in favor of the national organization, it would seem that the passage of the resolutions printed below will serve to clear the situation materially so that, in all probability, the W. F. M. will be represented at the F. A. M. Convention in Denver.

The resolutions adopted by the Seattle club are in full as follows:

"WHEREAS, The Seattle Motorcycle Club, as an affiliated club of the Western Federation of Motorcyclists, believe that a consolidation between the W. F. M. and the F. A. M. will result in an organization of greater strength and of more actual benefit to riders in general and the members of the respective federations in particular, and that the adoption of measures along the line set forth below will result in an increased membership and command the favorable attention of motorcyclists throughout the United States, and

"WHEREAS, During the recent visit of a representative of the F. A. M., the matter of consolidation was brought up by said representative, who was desirous of bringing about an agreement between the respective federations that would be fair and mutually advantageous; Now, Therefore,

"BE IT RESOLVED by the Seattle Motorcycle Club, that we favor a consolidation between the W. F. M. and the F. A. M. upon the following terms and conditions:

"That all moneys collected by the W. F. M. as dues shall remain in the West to form a nucleus for the State Treasuries as hereafter described.

"That all members of the W. F. M., upon acceptance of these resolutions by the F. A. M., shall become members of the latter body, that they shall be issued membership cards to expire one year from date on which they joined the W. F. M.

"That all F. A. M. members that were also members of the W. F. M. and who, for taking part in contests held under the W. F. M. sanction, were suspended from the F. A. M., be reinstated.

"That the F. A. M. so amend their constitution and by-laws as to provide for the United States being divided into seven or more districts. For instance, we favor Washington, Oregon, Idaho and Montana as the Northwest District. Other districts to be created to suit the members in the respective localities.

"That each district have a vice-president, such official to be elected by a direct vote of the members of his district.

"That each vice-president be a member of the National Board of Directors. His voting power to depend upon the number of members in his district. He to cast one vote for every fifty members or part thereof in his district.

"That the National Board of Directors elect the National Officers.

"That each state have an official known as the 'Secretary-Treasurer' who is to be the commissioner or organizer of such state, and also two directors. The Secretary-Treasurer is to be Chairman of the State Board and have a vote in same. All of the officials mentioned in this paragraph to be elected by direct vote of the members of their state.

"That the Referees be appointed by the State Board of the state in which they act.

"That the members shall have the power to recall any state or district officer who in their opinion is unworthy of holding office.

"That the National Board shall have the power to recall any national official, the procedure to be determined by the National Board.

"That in order to hold a state or district recall election it is necessary that a petition be signed by 20 per cent. of the state or district membership (as the case may be) and this petition on being filed with the district Vice-President shall be deemed sufficient for such election, in case of recall of state officials. In case of the recall of district officials such petition is to be filed with the National Secretary.

"That in no case can an official be put up for recall for more than once in a term.

"That 30 per cent. of the dues collected remain in the state in which the applicant joins and revert to the State Treasurer.

"That the moneys in the State Treasury be used to increase state membership, promote contests, provide for entertainment in district conventions and can be used as an emergency legal action fund, but when used as such must be reimbursed out of the National Legal Action Fund.

"That checks drawn from state fund for state expenditures shall be countersigned by a state director.

"That there shall be a Racing Men's Fund for professional and amateur riders who are injured while racing under Federation sanction. This fund to be created out of moneys received for race sanctions, the amount or per cent. to be determined by the National Board."

Digitized by Google

"That there shall be a National Legal Action Fund with a reserve of not less than $1,000. Should this fund be diminished below $1,000, it is to be reimbursed out of the general fund. The ways and means to be decided by the National Board.

In acknowledgment of the above resolutions, Director Sauer wrote the Seattle club, through Mr. J. F. Gorman, National W. F. M. Organizer, the following letter:

"I enclose herewith a copy of the letter which I am today forwarding to President Patterson. You will note my intention to introduce amendments to our constitution and by-laws providing for an apportionment of the F. A. M. directors so that there will be two from the Pacific Coast. This will give the Pacific Coast more representation than it is really entitled to in proportion to its membership, but I am sure that I shall have no difficulty in having these amendments adopted. It is my idea to have one director represent that section of the country including Washington, Oregon, Montana, and two or three other northwestern states, and the other director represent California, Utah, New Mexico, and possibly Texas.

"You will also note that, although my term as a director would not expire until August, 1914, I am tendering my resignation so as to give the Pacific Coast boys an opportunity to elect two directors of their own. This will be possible in view of my resignation and the fact that the term of Director Collins expires this summer.

"Regarding the resolutions adopted by the Seattle club, I am of the opinion that we can easily get together on all these propositions. Resolutions Nos. 2, 3, 4, 8, 10, 11, 12, 13, 17 and 18, are all, I am sure, entirely satisfactory.

"In regard to resolutions 5 and 6, it is my opinion that an extra vice-president would be unnecessary, as each director, elected by a certain district, would act as vice-president for that district.

"In regard to resolution 7, I think it would be an excellent idea to have the directors elect the national officials, although it seems to me that this would constitute a concentration of power against which the average member might object. I think it would be much better to have the national officials elected by convention consisting of one delegate from each state and that each delegate have a right to vote whether present at or absent from the convention.

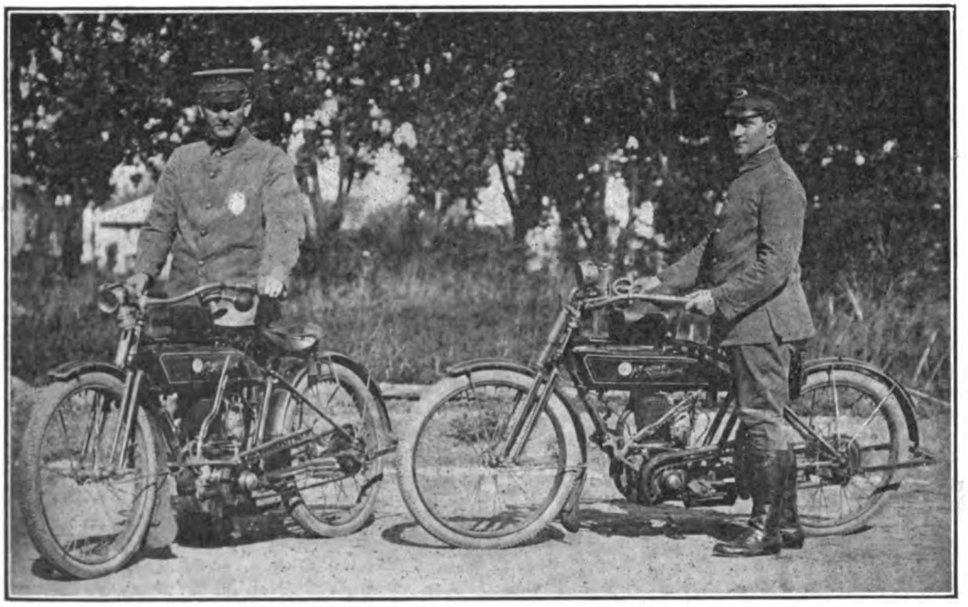
"In regard to resolution 9, I would suggest that the appointment of referees be made by the Chairman of the Competition Committee upon recommendation of or approval by the proposed State Board.

"In regard to resolution 14, while I would not favor a retention of thirty per cent. of the membership fees in *all* of the states, it is probable that this could be arranged for the states west of the Rocky Mountains, owing to their distance from F. A. M. headquarters. The great objection to splitting up the national fund is the fact that there would be duplications of expenditures. We have already had that experience in several states. For example, you state in resolution 15 that the monies in the state treasury will be used to increase state membership. In a good many cases the states would be duplicating the work of the national membership committee. On the other hand, there should be a state fund for emergencies, for convention expenses, and so on. It would be necessary to divide up the national treasury to do this. Why not have it so arranged that each state commissioner, upon requisition approved by the director in his district, would have the right to draw upon the national fund up to thirty per cent. of the membership receipts in his state? The result will be the same without the necessity of breaking up the national treasury into many small parts.

"I am sure that I represent the sentiment of our president and our other directors when I assure you that we are desirous of ensuring to all our members, in all parts of the country, equal representation and equal benefits. If your convention passes favorably upon these resolutions, it would be well to have your organization represented at the F. A. M. convention by one or more men empowered to arrange all details of the consolidation."

The Seattle club's resolutions, taken in conjunction with the opinions expressed by the F. A. M. director, disclose the fact that there is no important obstacle in the way of harmonizing the two elements. The Patterson letter referred to in Mr. Sauer's communication to the Seattle club, gives notice of his intention to introduce amendments to the F. A. M. con-

ONE OF the most enjoyable outings held by the Washington (D. C.) M. C. of late was to Savage, Md., 23 miles from the National Capital. The trip was made over the Baltimore boulevard. The club members were accompanied by their lady friends and were chaperoned by Mrs. John Blumer. On arriving at Savage the riders disposed of a luncheon and played games for a time before taking up the homeward trip. Other outings are being planned to Chapels Point, Middle River and Chatolanee Springs for the near future.



MOTORCYCLE officers are becoming quite common in the large cities these days, but it is safe to say that no motor-mounted bluecoats assume greater responsibilities than the two appearing in the accompanying photograph. These officers are attached to the White House squad in Washington, D. C., and it is their duty to accompany President Wilson on all his automobile trips. Formerly they used 4 h. Reading-Standards, but they are now equipped with speedy twins. Six Reading-Standard machines are in use by the Washington police department, four being 1912 models and two of the 1913 output.

Digitized by Google

stitution and by-laws so as to bring about a distribution of the directors so that each portion of the country will always be fairly represented on the board. Mr. Sauer also tenders his resignation as a director, effective the first of August of this year, although his term would not expire until August, 1914. His reason for resigning is to afford coast members an opportunity to elect the two directors to which they will be entitled if the amendments are adopted by the F. A. M. National Assembly. Mr. Sauer's letter to President Patterson is as follows:

"When on the Pacific Coast, I promised to introduce an amendment to our constitution and by-laws, to provide for a territorial distribution of the F. A. M. Directorate. I am writing this to give formal notice of my intention to introduce such an amendment to provide, in substance, that the Board of Directors shall consist of nine members, including the president, the preceding ex-president, and seven other directors, to respectively represent the following parts of the United States: One for the Pacific Northwest, one for the Pacific Southwest, one for the Rocky Mountain-Mississippi River district, one for the Middle West, one for the South, one for the Atlantic district and one for New England, these seven directors to be elected by the districts which they will represent, said directors to be clothed with authority to O. K. the expenditures up to a certain percentage of the F. A. M. membership receipts in each state.

"As, under the new arrangement, the Atlantic district will be entitled to only one director and as there are now two directors living in New York City, I wish this to be considered as my resignation, to be effective immediately after the Denver Convention. My term of office as director does not expire until August, 1914, but I wish to resign a year in advance of that date in order to give our Pacific Coast members an opportunity to elect a director under the proposed reapportionment."

Empire State F. A. M. Convention for Elmira

First Assembly of New York Motorcyclists Will Be Held July 4-6 and Fine Program Is in Hand—State Tours Are Arousing Much Interest—Fine Piano Will Be Offered for Membership Campaign.

STATE COMMISSIONER J. A. HALL, of New York, has just announced that the New York State Convention of the F. A. M. will be held in Elmira the fourth, fifth and sixth of July. Arrangements are under way for tours from different parts of the state, these tours to be so planned as to provide for the arrival of delegates and other riders in Elmira during the afternoon of the Fourth of July.

Liberal preparations are being made by the Elmira club, under the auspices of which the convention will be held. A fund of $1,500 has been raised, and an attractive program of meetings, entertainment, and races, is now in the hands of the state commissioner for his approval. Mr. Hall has indicated a desire to leave the matter of arrangements entirely to the Elmira club officials, being satisfied that they will make a big success of their plans.

The Elmira club has written to all the other clubs in the state, and the indications are that the attendance will be large. Buffalo, Syracuse, Rochester, and other cities in the western and middle sections of the state are sure to send big delegations. Mr. Hall is also anxious to have the eastern portion of the state well represented, and wishes to hear from all who are desirous of coming, either by machine or train. An endeavor will be made to arrange for a special car or cars leaving New York Thursday night and arriving in Elmira Friday morning, the Fourth of July. Those who wish to go to the Convention City by wheel will have to leave New York early Thursday morning, stopping over night about two-thirds of the way, and reaching their destination about noon Friday, the day of the opening of the convention.

The business of the convention will be to elect a State Commissioner, recommend a State Referee, adopt a State Constitution and By-laws, and arrange for the award of a Melodigrand player-piano which has been placed at the disposal of State Commissioner Hall by Henry & S. G. Linderman, Fifth avenue and One Hundred and Forty-second street, New York City. This magnificent instrument was obtained through the efforts of the New York State Commissioner with a view to having it awarded in connection with an F. A. M. membership contest in New York State. In all probability, the contest will be opened about the first of July and continue until the first of the year. Mr. Hall wishes the convention to decide upon the conditions under which the prize should be awarded. This piano is far and away the handsomest and most valuable trophy ever offered by the Federation of American Motorcyclists, and it goes without saying that the enterprise of the New York State Commissioner will result in the keenest kind of competition and a big increase in F. A. M. membership in the Empire State.

It is most important that those who intend to tour or go by train to Elmira from any part of the Hudson River district, between New York City and Albany, should send in their names and addresses at once to Commissioner Hall, whose address is 322 East Thirty-second street, Brooklyn, N. Y.

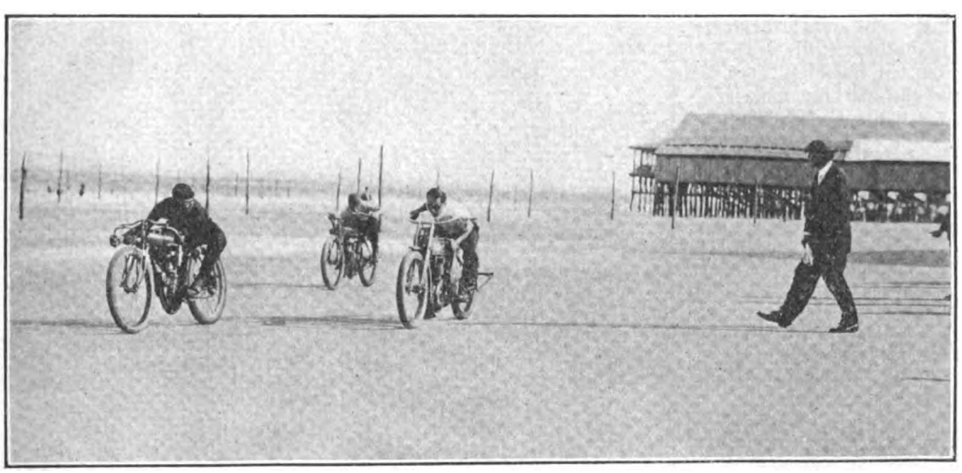
Commissioner Hall and a committee will strive to obtain special railroad rates from New York and Buffalo to the scene of the assembly for the benefit of those who may be unable to join the state tours.

Commissioner Hall makes a general request that clubs throughout the state refrain from holding race meets or long runs just prior to the convention dates or on the days set aside for the assembly, as it is the desire to concentrate interest on the state program. The Elmira boosters have already guaranteed an entertainment fund of $1,500 and outlined a tentative program, including races, a trip through Watkins Glen, a run to Rorick Glen Park, a smoker and a big banquet.

The state commissioner has also launched a publicity campaign and is seeking the cooperation of clubs, dealers and individual riders throughout his territory. He requests that local commissioners see to it that notices relative to the convention appear in the newspapers in their respective cities and towns, and that clippings of the announcements be forwarded to the commissioner at his home address.

EXPLAINING CLUB POLICY

FRANK S. LONG, chairman of the legal action committee of the National Capital M. C., of Washington, D. C., is making a trip to New York and Philadelphia, and is stopping at many of the towns en route. The trip is being made in the interests of the club's legal action committee, to which Mr. Long has been devoting a good deal of time of late. He has sent out appeals to many manufacturers and clubs in the territory surrounding the National Capital and is now following up his appeals with personal visits, his object being to explain fully the purposes of the club's legal fight.



SAVANNAH RACES ON BEACH

BEFORE an enthusiastic crowd of more than 1,500 people, Martin Schroeder, riding a white Thor "7", won the five-mile champion amateur event of the Savannah (Ga.) M. C., at Tybee, on May 22. Frank Laird, Excelsior, was second; Dennis Downing, Indian, third; O. A. Meyer, Excelsior, fourth, and J. S. Cafiero, fifth. In the five-mile race for singles, L. R. Buckner, took first place against a field of ten. He was fully a half mile in lead with W. C. Everett, second, and Z. Kelly, third.

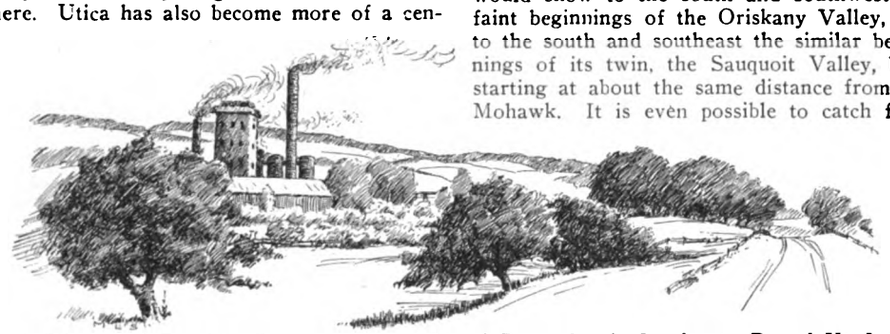
SCOUTING in the ORISKANY VALLEY

NOMAD

THE motorcycle tourist traveling east or west through Central New York State finds the city of Utica a convenient and usually a very welcome over-night stop, especially since the opening of a fine new hotel there. Utica has also become more of a center for north-and-south trips, especially as a half-way point between Scranton, Binghamton, the St. Lawrence and Canada; but, of course, the great stream of travel is over the trunk-line highway from Albany to Buffalo, or vice versa. It is principally to tourists going over this great central route that these paragraphs are meant to appeal.



A Glimpse of Franklin Furnace—Like a Bit of Pennsylvania Landscape Round Up Into New York State. There are Many Such Vistas in the Oriskany District.

We had come on in the afternoon from Albany to Utica—95 miles or so, over roads much better than on our previous ride two years ago; and might have gone through to Syracuse, except for the deepening shadows. In the course of the evening we met some people who knew some friends of ours; they suggested that we use up another full day, instead of two hours or so, in finishing the trip to Syracuse, and spend the morning making a little detour down the Oriskany Valley. The idea seemed worth while, and mentally calculating the time necessary for a round trip of 50-odd miles, with some local sightseeing thrown in, we asked a few questions about roads and directions.

Early the next morning found us on Genesee street, the principal business thoroughfare of the city, headed south. The trolley is followed through Oneida Square, over the West Shore and D. L. & W. railroads and across Sauquoit Creek into the suburban village of New Hartford; this is one of the best-paved exits for any city of the second-class in the state. On the left, just south of a large apartment house, is the home of the late Vice-President J. S. Sherman, not near as pretentious as some of its neighbors. The pavement is excellent all the way out, and a pleasing feature is that the lawns and yards of the many fine homes become more and more spacious as the city is left behind.

A DISTRICT OF PLEASING VIEWS.

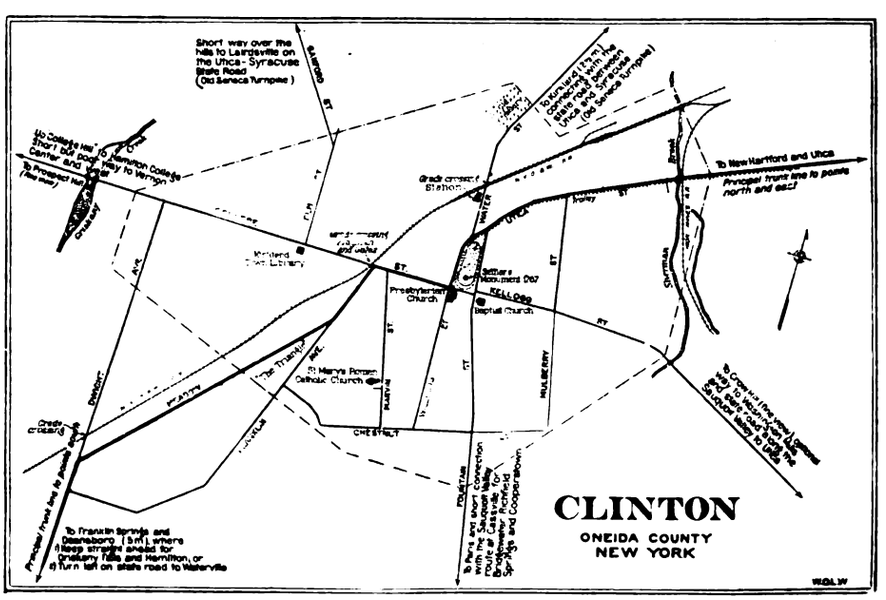
If it were possible to take a balloon view of the surrounding country from the front of the brick Post Office in New Hartford, it would show to the south and southwest the faint beginnings of the Oriskany Valley, and to the south and southeast the similar beginnings of its twin, the Sauquoit Valley, both starting at about the same distance from the Mohawk. It is even possible to catch from the moving motorcycle an outline of Washington Mills, the first town on the way down the other valley, through which road travel passes en route to Richfield Springs, Cooperstown, Oneonta and the Catskills. Genesee street now makes its first bend to the right at the large brick school, the brick pavement leading at once into the fine new State road.

We followed the double-track trolleys past the Golf Club, and a short distance beyond crossed the N. Y. O. & W. R. R. at grade; from now on this railroad and the highway are more or less together for several miles. Immediately beyond the crossing we turned abruptly left with the macadam, leaving the old direct road over the hill, which was abandoned by the State highway engineers, and is now used only by a few farmers. Immediately the peaceful valley of the Oriskany opens up, and the view from any point of vantage on the road is surprisingly distinct and fine.

If you look back from a favorable spot, the Mohawk Valley—of which you see nothing while in Utica or New Hartford, on account of their being "shut in"—shows clearly its northern outline, and you have a mere suggestion of where the Oriskany joins it, just east of the village of Oriskany on the local route from Utica to Rome, past the famous battlefield. The valley and the town are both named from Oriskany Creek, a small stream that rises among the hills of Madison County, flowing through a number of villages in Oneida County and into the Mohawk River a few miles west of Utica.

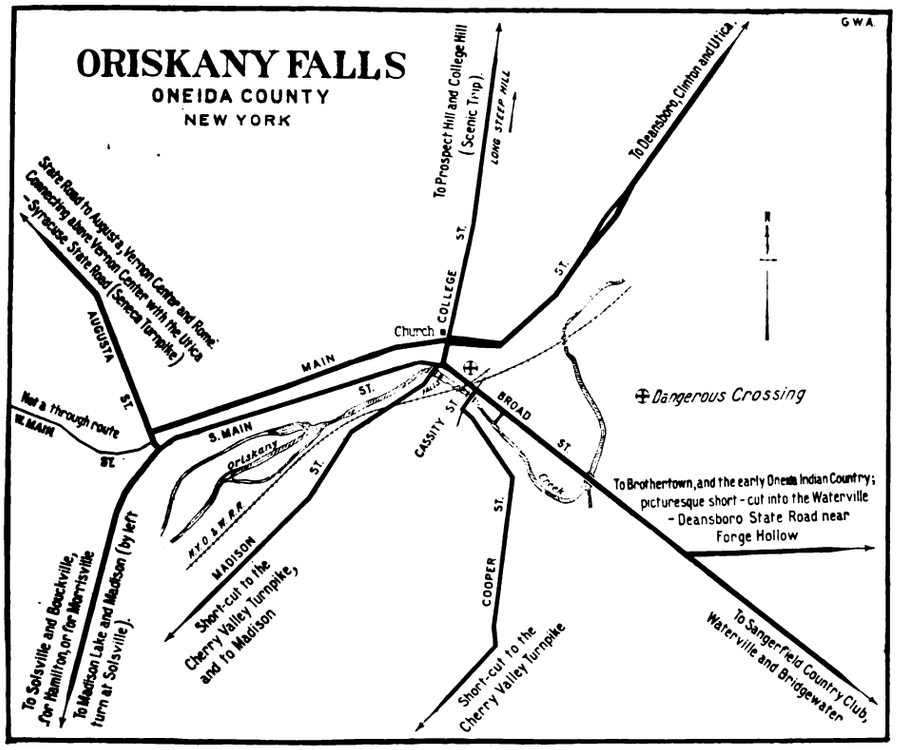
GOOD ROADS AND QUAINT TOWNS.

Originally the name was Oriska, the spelling found on some of the early maps, gradually evolved into the more mellow "Oriskany." It was but natural that the important battle fought in 1777 just west of the creek and the old village should have been given the same name, and later the monument also. On this trip you do not actually come upon



Map of Different Routes Through Clinton, N. Y., the Largest Village in the Oriskany Valley and Noted for the Attractive Surroundings.

Digitized by Google



The Interesting Town of Oriskany Falls, near Southern End of Oriskany Valley, in the Old Oneida Indian Country. A Section Full of Historical Associations.

the creek until a mile or so beyond Franklin Springs; but the valley is yours immediately after leaving New Hartford.

This is a region of many rounded hills, usually cultivated to the very tops, of well-kept farms, substantial buildings, good lawns and gardens—essentially a home section. Along the fine, long stretch of State Road, many Utica business men live, going to and returning from the city by half-hourly electric cars, automobiles and motorcycles. Commercial travelers covering the central New York territory, and numerous lovers of the country with interests elsewhere, have their homes in this section, and make trips into the larger centers as occasion requires.

Across the valley to the southwest the several buildings comprising Hamilton College are distinctly visible five or six miles away, the old-fashioned chapel (identified by its spire) being particularly well situated for the free play of sunlight and shadow. Other sightly buildings are clustered about the top of College Hill, one of the finest educational sites in the United States, a mile or so west of Clinton. As one comes into the village itself, the view of the hill and college is shut off until the open roads beyond restore it for a time.

Clinton is a quiet little village, whose chief attractions are good roads, perfect signboards (even on the unimportant streets), pleasant rural surroundings and fine homes—for aside from an iron mine operated to supply a paint mill, and a small knitting factory, there are no industrial establishments within its limits. Additional importance has recently been given to it by the completion of the State Road from Utica to Waterville, which sends this way a great deal of the north-and-south travel that formerly went from Utica down the Sauquoit Valley toward Norwich and Binghamton.

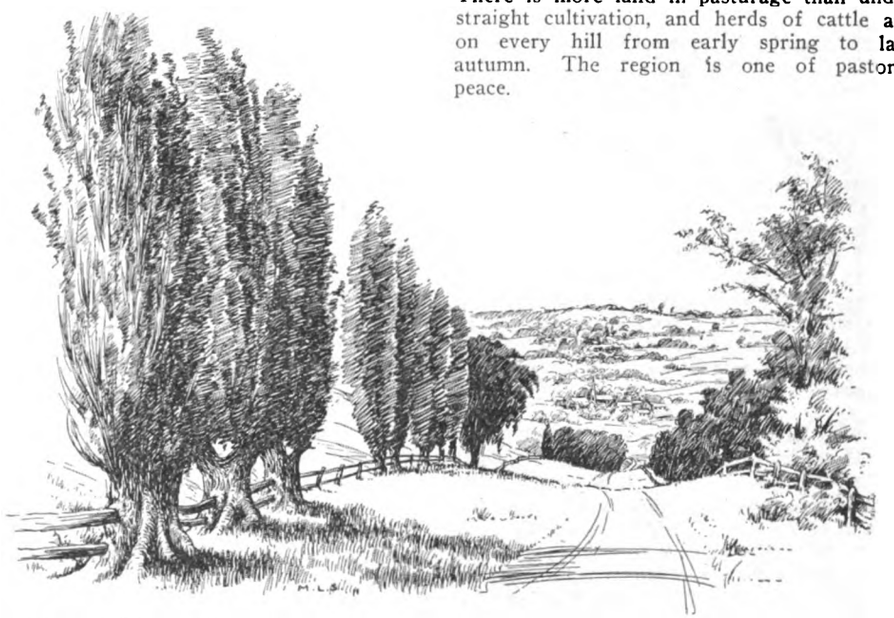
Besides being a college town, Clinton has had as many as six preparatory schools and seminaries at one time; but all these are now gone, including one on College street, said to have been the first schoolhouse erected west of the Hudson River, and where Grover Cleveland attended for a time in his early youth. Elihu Root was born on College Hill, in an old home then occupied by his father, a professor of mathematics at Hamilton, and now—greatly enlarged, both buildings and grounds—the summer home of the Senator and ex-Secretary of War, who usually spends several weeks there each year. Clinton Scollard, one of our younger American poets, has a fine but unpretentious home on College street, not far from the little park in the center of the town; Mr. Scollard was formerly a professor in the college, but gave it up a few years ago to devote himself entirely to literature.

Riding up Utica street to the head of the village park, one sees the last of the trolley and turns right on College street, then left—just before the railroad—into the Franklin Springs road. These turns are all well defined, as one is following the heavily traveled State Road throughout, coming into the little settlement of Franklin Springs, formerly Franklin Iron Works, so named from the blast furnace, the only industry the place ever had. After several years of idleness and decay the furnace was abandoned; so the name became inapt, and a change was made to Franklin Springs, on account of several fine mineral springs meanwhile discovered and opened in the near vicinity. There are rumors that a fine hotel may be built here and an effort made to develop a resort like Cambridge Springs, Pa.

A short distance beyond Franklin Springs Village, the State Road turns abruptly right, passing between the old iron works (on the right) and an enormous slag pile (on the left); the latter was once a waste product, but now it is being drawn upon for making roads, drives and walks in the villages and the country for miles around. The old iron plant was a good one in its day, and along the short right-hand road just before coming to the furnace may be seen a group of "company houses" where the workmen and their families lived; the red paint has been nearly worn off the houses, and the sight of many children at play, easily remembered by the writer, has probably gone for all time.

FIRST CROSSING OF THE ORISKANY.

Just beyond the furnace is our first crossing of the Oriskany on this trip, and what was once the feeder for the iron works is now the village "swimming hole." The State Road now shoots across the flats and over the railroad, turning left just beyond onto the foothills road along the opposite side of the valley. One is now in the open country, devoted exclusively to fine farming, stock-raising and dairying; here and there is a cheese factory, creamery or condensed milk factory. There is more land in pasturage than under straight cultivation, and herds of cattle are on every hill from early spring to late autumn. The region is one of pastoral peace.



A View of Clinton Village from the Harding Road, near the Estate of Hon. Elihu Root.

Digitized by Google

Straight on to Deansboro Village, the road mounts still higher, and there is a particularly fine view across to the east side of the valley. At Deansboro the State Road turns left, cutting across through Forge Hollow to Waterville; this would be out of our way, except that it would be only a short detour to Forge Hollow and across to the little settlement of Hanover Green. It was to the Congregational Church at the latter place that the father of Robert G. Ingersoll ministered, and during his pastorate there, his son, the noted infidel, was born.

Whether or not the Forge Hollow-Hanover Green detour is made, one continues down the Oriskany Valley from Deansboro through a hop-growing country, the stacked poles in the fields looking from the distance like stacked bayonets outside a military camp. Farther up on the cultivated hillsides there is apt to be a cornfield, the ungathered corn stalks in round piles, like so many upturned bushel baskets left outdoors. Of trees in and about the valley there are maples, cedars and hemlocks in large numbers, the latter especially in some camel's-back ridges on the uneven ground.

APPROACHING ORISKANY FALLS.

The abandoned Chenango Canal is occasionally in sight all the way between New Hartford and Oriskany Falls. Its construction is best seen in the deep glen just south of Deansboro, where it is carried over a quarter mile of lowland by means of a high artificial bank on either side. The nearby locks are already dismantled for their stone, and this costly work of 60 years ago has gone to ruin in the memory of some who may possibly have seen it built—thus rapidly have the means of transportation changed within the recollection of living men. It is a region of small streams, one just north of Oriskany Falls trickling down a fall of some forty feet in less than a hundred yards, and dashing with some show of force into an underground passage to the other side of the road. It will often be noticed how much care is given to culverts and bridges hereabouts, without which some parts of this line would be overflowed many times during the rainy season.

A certain quaintness is over all, and there is a rural charm in this one respect at least rivalling the better-known Mohawk. There are old-fashioned cider mills, where, in autumn, the tourist may stop for a drink brewed before his own eyes from choice apples picked from the surrounding orchards. Every turn

A Bit of Prettily Shaded Road Alongside the Elihu Root Farm.

in the road brings a new picture of beauty, and there is no getting away from the fresh, vital atmosphere of the Oneida County hills. If there is anywhere a better example of contented country life, the writer scarcely knows where to look for it. Population and business progress little if any in most places, but except at the old Franklin Furnace there are no signs of decay; everything is bright and prosperous looking. Country like this has the essential elements of restful living. At one point the canal banks are spanned by an arch-frame wooden bridge, looking from a distance like the bowstring bridges of Japan. Its type was common in the old canal days, to enable the boats to go under, but this is the only one now in sight from the road.

Oriskany Falls, the turning point on the run, is plainly seen ahead. The road is narrower and poorer because the State highway has not been carried beyond Deansboro; it is "built up" in spots, but fairly good and easy riding in dry weather. Coming out upon an unexpected widening of the valley, you may hear the water fall over a dam, and soon enter the town, keeping on down to the bridge where the knitting mills are found.

ON A FINE STRETCH OF MACADAM.

This is the "Little Falls" of the Oriskany country. Here the north-and-south road so far followed divides, one branch going to Hamilton, Norwich, Binghamton and Pennsylvania points, and the other to Madison and nearby villages. The farthermost point in our detour from the Albany-Syracuse-Buffalo route has now been reached, and we begin to think of getting back into that main line again.

To do this it is not necessary to retrace a single step, for we found that one of the great road improvements in this section is a completed State macadam, almost direct as the crow flies, from Oriskany Falls to Rome, cutting across the Utica-Syracuse trunk-line, which provides a fine trip all the way from the lower end of the Oriskany Valley to Syracuse. At the point near the "falls" where there is a break in Main street, note "Augusta street," leading almost straight west; we took this, and at the outer edge of the town met and followed the unmistakable macadam through the small towns of Augusta and Vernon Center. After leaving Vernon Center, the traveler should look out for an important 4-corners that might otherwise be missed, as it is out in the open country; turn left and follow the well-known route past Oneida and Canastota into Syracuse.

We had taken one leaf from the Oriskany Valley for our touring book, and were more than satisfied with it. Before Syracuse was reached we had a plan already made to stop on the way back, if time and weather should permit, and make a similar detour down the neighboring valley of the Sauquoit. This we did, but the telling of it would make another story. Central New York has many of these fine runs, especially in the lake district, that the motorcyclist who travels only over main lines often knows very little about.

Short Grass Club Completes Tour Schedule

AS THE result of a conference between Secretary P. E. Zimmerman, of the Kansas Short Grass Club, and President B. J. Patterson, final arrangements for the big tour of the club to the Denver convention have been completed and are announced as follows:

Saturday, July 12, three divisions of the tour will leave Wichita, Emporia and Salina. They will arrive at Hutchinson on the twelfth at noon. At 7 a. m. Monday, the fifteenth, the tourists will leave Hutchinson over the Santa Fe Trail. Ten minute stops will be made at Nickerson, Sterling, Lyons, Chase and Ellinwood and dinner will be had at Great Bend. The next point on the route is Pawnee and the party is scheduled to reach Larned at 3 p. m.

Leaving Larned at 7 a. m. the following day ten minute stops will be made at Garfield, Kinsley, and Soldiers and Dodge City will be reached at noon, where they will remain for the rest of the day. On Wednesday, the sixteenth, the riders will leave Dodge City at 6 a. m. and a one hour stop will be made at Cimarron. Dinner will be had at Garden City at 11 a. m., and at 1:30 p. m. the party will proceed through Deerfield, Laklin and Syracuse to Holly, the night stop.

The start will be made from Holly at 6 a. m. on the seventeenth. Lamar and Fort Lyon are the principal towns to be passed and the night control will be at Las Animas. Leaving this point 7 a. m. Friday, the riders will pass through La Junta, Swink, Rocky Ford and to Fowler, where they will stop for dinner. Pueblo will be the night stop.

The party will leave Pueblo at 7 a. m., and after passing through Florence will arrive at Canon City by 11 a. m. Side trips will be made from this point until the next day at 1 p. m., when the riders will leave for Colorado Springs, where they are scheduled to arrive at 6 p. m. Monday, the twenty-first, will be spent in and about the Springs and at 7 a. m., on Tuesday, July 22, the start will be made for Denver, where the tourists will arrive at noon.

TOLEDO'S FIRST MEET

TOLEDO, O., May 26.—A large crowd attended the first race meet of the season at the fairgrounds track, Sunday, May 25. Creviston, the Clevelandite, and Harold Cole, of Toronto, starred in the open events, while William Bailey, on a Yale, took first honors in the stock machine races. Summaries:

Five-mile stock, Toledo club riders. Bailey, Yale, first; Evans, Indian, second, and Weitzman, Merkel, third. Time, 6:40⅘.

Five-mile open. Creviston, Thor; Cole, Thor, and Evans, Indian. Time, 6:20⅗.

Ten-mile open. Cole, Thor; Creviston, Thor, and Jones, Merkel. Time, 11:34.

Five-mile handicap. Bailey, Yale; Thomas, Thor, and Ganders, Indian. Time, 6:30.

Four-mile open. Cole, Thor; Creviston, Thor, and Ponti, Indian. Time 4:38⅗.

Twenty-five mile open. Cole, Thor; Huntsbery, Merkel, and Flath, Excelsior. Time, 27:54⅗.

MAY HOLD PARKWAY RACE

AT a meeting of the Riverside Motorcycle Club, 531 West One Hundred and Tenth street, New York City, held Thursday, May 1, the following officers were elected: A. R. Burchenall, president; D. R. Hobart, secretary-treasurer and S. B. Thorpe, road captain. The club proposes to hold a 40-mile race on the Motor Parkway on Sunday, June 8, machines of 61 cubic inches only being eligible. Should the weather prevent it on that date the event will be run off on the next clear Sunday.

Five Hundred Riders Expected on Olio Tours

Schedules Covering Four Chief Trips to State Convention in June are Complete and Side Trips Are Now Receiving Attention—Election of State Officers Booked for the Opening Day.

WITH the business and entertainment programs practically complete for the first annual convention of the Ohio State F. A. M., enthusiasm has reached an unexpected pitch and from every viewpoint the outlook is satisfactory. The tours to Cleveland, the convention city, are booked for June 19-20, and the convention proper will be staged on the two succeeding days. The business meeting and election of state officers will be held on Saturday morning, June 21, at 9 o'clock, in the Hollenden Hotel.

Among the features of the two-day entertainment program arranged by the Cleveland Motorcycle Club are a moonlight sail on Lake Erie, swimming contests at Euclid Beach, races for the state championship at the Randall one-mile dirt track, race meets on the Luna Park Motordrome and a motorcycle parade through the city's park system. The board track meets will be held on Saturday and Sunday nights, and the committee in charge of arrangements for the speedfest is confident that new marks will be hung up for the saucer.

As has been previously stated the main tours to the convention city will start from Cincinnati, Marietta, Toledo and Youngstown, with side tours from many of the other cities and towns. These tours will end in Cleveland at the Hollenden Hotel, on Friday afternoon, June 20. It is expected that the four main divisions will arrive about 5 o'clock, and they will be at once lined up for a photograph.

Each touring division will be in charge of a tourmaster, who will appoint two aides to assist in the execution of his orders. The squads will be divided into companies with a captain and two lieutenants in charge of each. As soon as a rider announces his entry in a touring division he will be given a number. The tourmaster will be in full charge, and will ride at the head of his division. Each captain will be responsible for his individual squad, subject to the orders of the tourmaster. One lieutenant will ride at the head of his company with the captain, and the other will bring up the rear.

No rider will be permitted to pass the captain of his company, or the lieutenant who may be temporarily in charge. The captain of a company must not pass the lieutenant in charge of the rear of the squad preceding. Failure to comply with any of the regulations will result in disqualification for the offender and he will not be eligible for a medal.

The riding schedule for the tours will be 18 miles an hour, and the program for the Southwestern division follows:

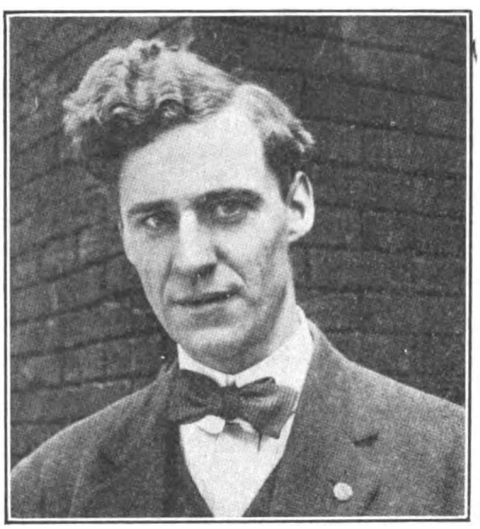
Leave Cincinnati Thursday, June 19, 7:30 a. m.; Hamilton, 8:57; Middletown, 9:40. Arrive Dayton, 11 a. m., noon control; leave Dayton 1 p. m.; Springfield, 2:23; arrive in Columbus, 4:50; night control. Leave Columbus, Friday, June 20, 6 a. m.; Delaware, 7:20; Marion, 8:27; Bucyrus, 9:34. Arrive in Norwalk, 12:04; noon control. Leave Norwalk 1:30 p. m.; Oberlin, 2:47; Elyria, 3:14. Arrive in Cleveland, Hollenden Hotel, 4:37 p. m.

The schedule for the Northwestern tour will be as follows:

Leave Toledo, June 20, 8 a. m.; Fremont, 10:19; Bellevue, 11:09. Arrive in Norwalk, 11:49; noon control. Leave Norwalk with Southwestern division on above schedule.

Riders on the Sidney and Portsmouth side tours will observe the following schedule:

Leave Sidney, Friday, June 20, 5:30 a. m.; Wapakoneta, 6:37; Lima, 7:20; Findley, 9:03; Fostoria, 9:50; Tiffin, 10:33; Bellevue, 11:46; Norwalk, 12:26. Leave Norwalk with Northwestern squad on their schedule.



R. S. McConnell, of Cleveland, a Hard Worker on the Convention Plans.

Leave Portsmouth at 12 noon; Waverly, 1:47; Chillicothe, 2:44; Circleville, 3:51. Arrive in Columbus, 5:28 p. m.; night control.

Schedule for Southwestern tour: Leave Marietta Thursday, June 19, 1 p. m.; McConnellsville, 2:53. Arrive in Zanesville, Friday, June 20, 7 a. m.; Coshocton, 8:37; New Philadelphia, 10:24; Canton, 12:04. Leave Canton 1:30 p. m.; Akron, 2:47. Arrive in Cleveland, Hollenden Hotel, 4:47 p. m.

Riders from the Northeastern district will leave Youngstown on Friday, June 20, at noon; Warren, 12:47; Painesville, 3:14. Arrive in Cleveland, Hollenden Hotel, 5:51 p. m. The boys from Ashtabula and vicinity will leave on Friday at 1:45 p. m. and join the Northeastern division at Painesville at 3:14 p. m.

WARNING FROM CANADA

FROM President K. R. Spencer, of the Canadian Motorcyclists' Association, comes the following self-explanatory letter:

"On behalf of the Canadian Motorcyclists' Association, the writer begs to advise that this organization has suspended, for improper practices, the Toronto Motorcycle Club. They are endeavoring to form an outlaw organization to be called the Canadian Motorists' Association. This will enable them to use our lettering, namely, C. M. A. We will be pleased if this matter is given publicity so that American motorcyclists may know under what auspices they are riding when in Canada."

On receiving a copy of this letter Chairman Thornley, of the F. A. M. Competition Committee, issued a notice warning affiliated American riders against competing under the auspices of the newly launched Canadian body, in view of the fact that the latter is not officially recognized by the F. A. M.

AT the recent re-organization meeting of the Calgary (Canada) Motorcycle Club the following officers were elected: George Bain, president; John Barr, vice-president; C. Leslie Munroe, secretary-treasurer; F. W. Sanguine, captain, and R. S. Chisholm, lieutenant. The club has renewed activities with a greatly increased membership and a busy program is planned.

TRAINING BOARD TRACK RACERS

ONE of the most interesting phases of board-track racing—a phase that did not attract serious attention until the opening of the present season, by the way—is the training of the young speedsters who aspire to spin the big bowls and perchance clip a record or two, if Fate (and their carbureters) befriend them. These lads come from all parts of the country, from city and village, from shop and mill; they are of all sizes and nationalities, and their knowledge of a racing motorcycle ranges from a little dirt-track experience to utter ignorance of the two-wheeled comet. It is obvious that with such material to choose from the motordrome managers can always find nervy riders, and it is equally certain that they must exercise care if they are to avoid trouble.

It is one thing to bestride a fast twin on a straightaway, or even on a board track in practice, and another thing altogether to jockey the machine through a field of riders and come down the stretch "wide-open"—but with the mount under perfect control. Such work as this requires steel nerves, tireless muscles and the ability to see, think and act in a flash.

TRYING OUT APPLICANTS.

Practically all the training of speedsters for the Middle-Western circuit of board tracks during the spring just past has been done at the St. Louis motordrome. Here the boys were given try-outs and those who qualified for track work were assigned to the teams which will make the circuit of the tracks throughout the summer. As soon as the weather permitted the big St. Louis bowl was cleaned and scrubbed and it was then ready for preliminary work. No less than 125 applications were received from riders who desired to enter the racing field, several coming from England and one from France, in addition to the scores received from all parts of the United States.

When the officials decided to open a training camp at the St. Louis track, Brownie Carslake, the well-known racer, was placed in charge, and it rested with him to retain the young speedsters or send them hiking back to the small town meets, according to the ability they displayed under tests. The first lesson involved a few trips around the bottom of the bowl to prove that the rider knew how to control his machine, and to accustom him to the first rise of the track banking. While undergoing this test the rider was required to close and open his throttle at about thirty-yard intervals to show that he knew how. Then came instructions relative to oiling, and the beginner was again sent around the bottom of the track with instructions to close and open his throttle and also give his motor a pump-load of oil.

WORKING UP ON THE TRACK.

All this time the rider was traveling below the first white line on the track (the St. Louis bowl has two white lines), and as he became confident of his ability to handle his mount, attend to the throttle and oil and maintain his balance on the steeply-banked track he was permitted to ride above the first white line and to approach the second line. Then for several days he was called upon to ride the center of the bowl and later to hold the white (pole) line. After convincing Carslake that he was perfectly at home at this stage the rider was permitted to go out with one other racer. His first ride with another machine on the track was taken in the daylight and was later repeated at night.

The next lesson provided for two other riders on the track, and several trials were made under these conditions, both during the day and at night. Then another speedster was added, and another, so that finally the new rider found himself spinning the big bowl in company with five others. After this he was given a series of lectures relative to the action to be taken in emergencies. All riders are instructed as to what course to pursue should the arc light be thrown out of service at night, or in the event of any accident on the track. These lessons are very thorough and touch upon every phase of the racing game that a rider is likely ever to encounter. If the trainer is still satisfied at this point that the speedster has good material in him he is given an opportunity to sign up for one of the league teams.

STRICT DISCIPLINE AT THE CAMP.

For the first try-outs the new rider was on the track only fifteen minutes in the day, as arrangements had to be made to accommodate the scores of beginners. A strict record was kept of each rider's performances. If he fell or mismanaged his machine he received a black mark and there was just that much less liklihood that he would be chosen as a team rider. If a beginner failed to report for practice he was compelled to give a satisfactory explanation or have his name scratched from the list.

On the whole the league officials and Manager J. H. Rush were well satisfied with the progress made in the training camp, and with the caliber of the racers developed for the various teams. Carslake was complimented upon his judicious handling of the material turned over to him, and the speedsters all admitted that they were given a square deal by the trainer. So the first board track training camp proved a success. Now the idea is taking root elsewhere. New riders are being tried out on the Brighton Beach Motordrome under the direction of Arthur Chapple, the veteran speedster, and it is stated that a strong squad of record-chasers will be developed from the forty or more applicants whose names were on the list at latest reports. Chapple has some training wrinkles of his own, but his system in general does not differ greatly from that used by Carslake at St. Louis.

FRISCO'S SPEEDY COP

E. M. SAXON, mounted officer No. 3 of San Francisco, who appears in the accompanying photograph on his Thor "7", has acquired the reputation of being one of the speediest riders

in the city. He has consequently become a terror to the speed law violators in Golden Gate Park, and his work in that district is proving most effective.

INGALL TRACK MEET

JOLIET, ILL., MAY 25.—The motorcycle races held at the Ingall speedway today were productive of much excitement and were well attended. Perry, the Excelsior rider, was the star of the day, while Gaudy, also riding an Excelsior, came in for second honors. Summaries:

Five-mile novice, single, stock.—Gaudy, Excelsior; Peterson, Indian, and Heintzelman, Indian. Time, 5:54⅘.

Five-mile novice, twin, stock.—Carlos, Excelsior; Hetland, Indian, and Kweiser, Excelsior. Time, 5:17⅘.

Ten-mile stripped twins, stock.—Allen, Indian; Perry, Excelsior, and Beck, Indian. Time, 9:35.

Ten-mile, dealers, stock.—Perry, Excelsior; Bonack, Excelsior, and Carbon, Excelsior. Time, 9:56.

Six-mile stripped singles, stock.—Gaudy. Excelsior; Peterson, Indian. Time, 7:12⅕.

Ten-mile stripped twins, stock.—Perry, Excelsior; Allen, Indian, and Cooley, Excelsior. Time, 9:35⅕.

Eight-mile stripped stock singles.—Gaudy, Excelsior; Peterson, Indian, and Heinzelman, Indian. Time 9:39⅕.

Ten-mile match.—R. Perry, Excelsior, 9:27⅘, and Beck, Indian, 9:34.

FROM THE WATCHFUL CHAIRMAN.

FOLLOWING the recent accident at the opening of the Tuileries Motordrome in Denver, Col., Chairman Thornley, of the F. A. M. Competition Committee, received a diagram of the track and the paragraph which follows is an extract from a letter written by the chairman to Referee A. L. Osborn, relative to the construction of the fence at the top of the banking:

"I note in the illustration of the track, which is a diagram, and not of necessity a true representation, that the wire netting seems to be on the outer side of the posts. I can hardly believe that you or anyone else would be so foolish as to allow the netting to be placed that way. In the first place, it would be easier to rip off in the direction of the spectators, and the bare posts on the inside are a frightful menace to riders. If this illustration is correct you will stop all racing on the Tuileries track until the condition is rectified."

Keeping Your Spring Forks in Working Trim

Regular Applications of a Suitable Lubricant Will Save Trouble and Repair Bills and Add to the Life of These Important Parts—Simple Methods of Replacing Spring Fork Bumpers.

By George M. Johnson

THE spring forks may not be the most important feature of a motorcycle, but they are important enough to deserve more care than they receive at the hands of many riders. Altogether too high a percentage of motorcycle owners neglect the forks absolutely until a pronounced squeak indicates a need of oil. Then an unnecessarily large amount of engine lubricant is squirted all over the offending part, with the general idea that some of it may work its way into the dry place and stop that disconcerting squeak. That is no way to oil the forks.

Most modern motorcycles are equipped with grease cups and spring oilers, so that it is a very simple matter to supply oil to all parts about the fork that are likely to need it. One should not defer his oiling until a squeak shows that oil is needed. About once in so many miles—a little observation will quickly determine how often—the grease cups should be twisted down a turn or two and light machine oil injected into the spring oilers. Don't use heavy engine oil, as that does not flow well, especially in cold weather, and the bearing surfaces might be dry with the spring oiler full of a too heavy lubricant.

CLEANLINESS AND OILING.

In oiling the forks, be careful not to neglect any part. Some of the bearing surfaces on new models, and all of them on old machines, will probably show nothing in the way of spring oilers. Such places must be oiled by squirting the fluid around on the outside, accompanied by a vigorous jouncing up and down of the fork, to work the juice in where it will do the most good. However, before oiling in this way, be very careful to clean off, by means of a paint brush and gasoline, all grit and road dust about the part to be oiled. If the forks are dusty, the oil will surely carry some of the grit down into the bearing, and then you have a very effective grinding mixture, for common road dust is really nothing but "rock flour," which, combined with oil, will grind to beat the band.

You have doubtless seen motorcycles whose forks showed a surprising amount of play, which it was well nigh impossible to get rid of. That play is due in nine cases out of ten to the cause just spoken of. Grit and dust worked down into the bearings when these were oiled, and no steel is hard or tough enough to resist the wear that is thus put upon it. A little thought and care on the part of the rider will prevent such a condition.

A very popular type of fork at present is the so-called cradle spring, with the rubber bumpers above and below to take up some of the rebound shock. These bumpers, especially the upper one, which acts as a roller, will wear out and must be replaced from time to time. Fitting a new upper bumper is something of a job, as the fork must be partly dismounted, and the replacing is likely to be hindered by the resistance of the leaf springs.

FITTING NEW BUMPERS.

In the first place the life of a roller bumper can be greatly increased if it is wrapped with common tire tape. Get some one to push down the end of the spring, to remove this from contact with the bumper, and then it will be comparatively easy to wrap successive layers of tape about the rubber. If a bumper seems likely to drop apart when you are many miles from a new one, this treatment will give it strength to last a long time after it would otherwise be useless.

It is not actually necessary to dismount the top of the fork supports to fit a new bumper. A very satisfactory substitute for this rather troublesome job is to split the rubber open lengthwise with a sharp knife, whereupon, by pushing down the end of the spring, the bumper can be slipped into its place very easily. Then it should be wrapped with a liberal supply of tire tape to make it keep its shape and position. Since the bumper can be *rolled*, this tape wrapping operation is not so difficult as it might appear. It is merely necessary to remove the pressure of the spring.

Of course, if your machine has a spring frame, this should be oiled frequently, just as the spring forks must be oiled. On 1913 Indian machines one should examine the lower bumpers occasionally to make sure that they are not working loose. If one or both of them should chance to be lost, a beer bottle cork, cut to fit and held in place by wrappings of tire tape, will make a good substitute until a regular bumper can be obtained. It is a poor plan to ride a machine with the bumpers missing, as then the springs have excessive play, and if the motorcycle is driven over a very rough road, broken springs may result. In fitting new rubber bumpers either to frame or fork, try to get a section cut from hose of the right size, rather than one of pure rubber. The hose is made to stand heavy pressure, and its rubber is strongly reinforced and interwoven with canvas, so that this type of bumper will outlast several of the pure rubber kind.

If the roller bumpers on your spring fork wear out very rapidly, there is something radically wrong. The leaf plates may not be absolutely true, thus bearing on one side of the rubber more heavily than on the other; or the spring may press too firmly against the bumper. The present one on my machine has covered well over eight hundred miles, and is just as firm as the day it was put on.

H. D. CAPRON, manager of the Toledo Yale store, acted as host at a dinner given to thirty-three Yale riders who recently made a run to Fostoria. The only trouble experienced on the 100-mile trip was one puncture.

Gale Makes Angola-Boston Trip in 19 Hours

ONCE more M. E. Gale has proved himself an intrepid pilot of the single-tracker and his Emblem twin has demonstrated its ability to put the miles behind in record style regardless of weather conditions. On Thursday afternoon, May 15, Gale left Angola for Boston, Mass., with a view of establishing a record for the trip, and at 11 a. m. the following day he arrived at his destination. He had spent 19 hours on the machine and covered 600 miles.

As usual Gale carried a passenger in his novel "sociable" seat, his companion on the dash to Boston being Willard Hudson. The latter weighs about 190 pounds and Gale's weight is 180 pounds, so it is evident that the Emblem carried a fair load throughout the run.

A bulletin received by the Emblem folks from Albany brought the news that Gale and his companion arrived there at 3 a. m. on May 16, and that some rain had fallen. The storm left the roads in rather poor condition, but the hardy pilot kept his mount up to its best work and had the satisfaction of sending the following telegram from Boston:

"Arrived 11 a. m., May 16. On machine 19 hours. No trouble; never had engine work better. Climbed everything, and fast enough. Killed one cat."

Records are not at hand relative to the best previous time on a motorcycle between Angola and Boston, but it may be taken for granted that Gale's figures will stand for some time, especially in view of the fact that the machine carried double throughout the journey.

Gale and Hudson upon their arrival in Boston.

NEW SANCTION RULING

CHAIRMAN J. P. Thornley, of the F. A. M. competition committee, announces the unanimous adoption of the following resolution introduced by Director Sauer:

"Resolved: That the chairman of the competition committee be, and is hereby, authorized to grant sanctions free of charge for all competitive events held in direct connection with an annual F. A. M. State convention. Application for such free sanctions shall be made by an authorized State official or State committee, who shall demonstrate to the satisfaction of said chairman that said sanctions are desired for an endurance run, race meet, or other competitive event which is part of a program including the regular annual State F. A. M. convention. Such sanctions shall be granted not more than once a year in each State and may be for an endurance run, or race meet."

DISTRIBUTING F. A. M. BOOKLETS

ALL renewal cards being sent out from Secretary Gibson's office are accompanied by a slip announcing that the 1913 F. A. M. "Helping Hand Book" and the 1913 booklet giving the names of several hundred registered repair shops are ready for distribution, and may be had on application to the secretary's office.

How to Calculate the Weight of Flywheels

WEIGHTS of flywheels can only be approximately given. The weight referred to is that of the *rim* and as flywheels are of cast iron it will be an easy matter to calculate the width and depth of the rim, using a web of three-sixteenths of an inch on each wheel. In fact, it would be a good idea to use the flywheels of a 4 h. single-cylinder motor as general patterns, machining the blanks down until they are of the proper weight. Do not have the castings made at a stove works.

The formula by which the weight of a flywheel is calculated is $w = 9.8\ (bl \div r)^2$ pounds, when w is the weight of the rim, b the bore in inches, l the stroke in inches and r the radius of the wheel. This is for a V-type twin motor. Then with b as 3¼, l as 3¼, and r as 6 inches (12-inch diameter flywheel), w will be $9.8\ (13/4 \times 15/4 \div 6)^2$ or 36 pounds for the pair.

This is before balancing the flywheels. Run each with the axis horizontal before drilling for the crank-pins, and see that they cease to revolve indifferently: i. e., at any point on the rim when the motion has stopped. Next drill the holes for the crank-pin and fit the latter in place in both wheels. Mount the pair with their shafts on knife-edges and balance for the crank. This is done by drilling the rims so that the crank-pin will teeter above and below the horizontal when the wheels are rocked on the knife-edges. Finally, put on the connecting-rods and pistons and hold one set horizontal and the other at 45 degrees above. Now drill or add weights to the flywheels until they teeter or "balance" through a small arc from the horizontal position.

WHAT is the weight and size of flywheels for a twin motor, of 3¼-inch bore and 3¼-inch stroke, running at the usual speeds? I intend to use this motor for touring purposes, and apply to you since I cannot find any data on the subject of flywheel design or its construction. Please tell me also how to balance flywheels.

JOHN J. DILLON.

You will now have the best balance for running that is possible in a 45-degree twin motor, which we presume is the type you intend to fit the flywheels to. The weight of the flywheels will be reduced somewhat by this time, or added to, if weights are applied instead of the rim being drilled. The flywheel castings will have two bosses, 180 degrees apart. One of these is for the crank and the other for the counter-weight. Drilling for balancing is done in the immediate vicinity of the crank through the rim from side to side. The web is not touched. It must be borne in mind that each flywheel weighs 18 pounds, not each 36 pounds. This weight of wheel will give a motor that will pick up well when the throttle is opened, and run satisfactorily at slow and low-medium speeds. The connecting-rods must each be of the same weight, and this is also true of the pistons. You will see from the above that the balancing is individual work for each motor and that turning out a lot of flywheels of equal weight and assembling them with a scratch lot of pistons and connecting-rods whose weights vary is out of the question.

There are no books in the English language on the design of motorcycle motors, but you can get valuable information from "The Gasoline Automobile," by P. M. Heldt, Volume I. This work is a compendium of present motor design, rather than an original book, and is almost the only one of its kind in English.

A MATTER of DOLLARS & CENTS

by L. F.

THERE is no denying that in time even the most enthusiastic motorist will come to regard his vehicle, whether motorcycle or automobile, from a dollars-and-cents viewpoint, and it is logical that he should be influenced by the make-up of his expense account. I have had considerable experience, covering both motorcycle and motor car fields, and I have found it very interesting to keep a strict watch upon my expenditures. This policy, pursued from the purchase of my first motorcycle to the present time (I entered the ranks of automobilists in 1912), has enabled me to prepare the tables embodied in this article, and in view of the fact that all the figures given are based on actual mileage covered I believe they should furnish some food for thought.

My experience extends over seven years, dating from 1905. It was in the spring of last year that I bought a motor car and began to accumulate part of the data which appears hereafter. Early in 1905 I had a bad attack of "motoritus." I knew nothing of gas engines, except that many of them were used to propel vehicles from somewhere to somewhere else in the shortest possible time. But that was all I needed to know. I decided that I must have a motorcycle, and after "counting the makes on the road" I made a purchase. I would like to add at this point that after having bought seven machines of the same make (a new mount each year), I have no fault to find with my original choice.

NOT A "BOULEVARDIER."

I well remember the momentous occasion when my first machine arrived at my home, snugly crated. I viewed it with a feeling of pride, not unmixed with awe. Attached to the machine in many places were tags bearing instructions for the novice and a booklet on "How to Operate the Motorcycle" was also supplied. All these I perused carefully, and I recall thinking that the subject was pretty fully covered. I soon had the machine in working trim and experienced no difficulty in getting under way. I was several hours late for dinner that evening, but otherwise everything went off in great shape.

Since that time I have ridden between six and ten thousand miles a year on the motor two-wheeler. During that period I have on all occasions made my own repairs and studiously avoided the repair shops, except in the few instances when I did not possess the proper equipment to do justice to the job. My machines have always been driven hard and fast—too fast, perhaps. I am quite proud to be able to say that I have not been elected a member of the "Grant's Tomb Tourists," as those of the motoring fraternity have been facetiously dubbed who do nothing but city touring between Seventy-second street and Grant's Tomb.

My motorcycles have carried me as far north as Rangeley Lakes, Maine, and the automobile to Belgrade Lakes and return. There are few roads, good or bad, within 200 miles of New York City that I have not traveled by both two and four-wheeler.

SOME INTERESTING FIGURES.

Let me say before going further that I have proved to my own satisfaction that speed and poor roads have a direct and costly bearing on the expense attached to operating any rubber-tired, gas-driven vehicle. It has always been my custom to run my machines as economically as was consistent with maximum efficiency and to this end I have kept an accurate account from day to day of every penny I have spent during seven years of driving my motorcycles and the car. The comparisons are interesting. From March 16, 1910, to March 16, 1911, I used a new 1911 model, twin-cylinder, 5 h., chain-driven machine, and for the season distance of 9,486 miles my record shows costs as follows:

Actual running expenses: Gasoline, 210 gallons; oil, 15 gallons; repairs and parts, tires and patches, nuts and bolts, extra pedal and minor articles—$91.89. This gave me an average running cost of $0.009 per mile.

For accessories my outlay was as follows: Prest-O-Lite tank and lamp, magneto switch, oil can, horn, New Jersey license, spare parts, speedometer, cut-out whistle, horn reed, etc.—$34.70. Thus with running expenses and accessories I had a total of $126.59. Figured on this basis my operating cost per mile was $0.0125. To this total must be added the cost of the machine, $300, less the amount for which I sold it, $190, or $110. This gives me a grand total of $236.69. Let us figure the average cost per mile once more and we have $0.025. In other words, that is what it cost me per mile to run my motorcycle during the season. Average gasoline consumption, 45.18 miles per gallon; oil, 632½ miles per gallon.

RECORDS FOR THE SECOND SEASON.

From March 16, 1911, to March 16, 1912, I used a new 1911 twin, 7 h., chain-driven and with two speeds. My mileage for the season was 6,750 and my record shows costs as follows: Actual running expenses, including 153 gallons of gasoline, 10½ gallons of oil, repairs, tire and patches, two extra pedals, etc.—$61.98. This gave me an average running outlay of $0.009 per mile.

My accessories during this season were as follows: Speedometer, pliers, oil can, goggles, gauntlets, cold chisel, gas tubing, lamp reflector, set of wrenches, short drive chain, etc.—$23.89. Adding this to the running expenses gives a total of $85.87, and on this basis the operating cost per mile was $0.0125. To this must be added the cost of the machine, $300, less the selling price, $200, which left the actual cost to me at $100. In all, we have $185.87, giving an average cost per mile for the season of $0.027. The gasoline consumption was at the rate of 45 miles per gallon and oil was used on a basis of 643 miles to the gallon.

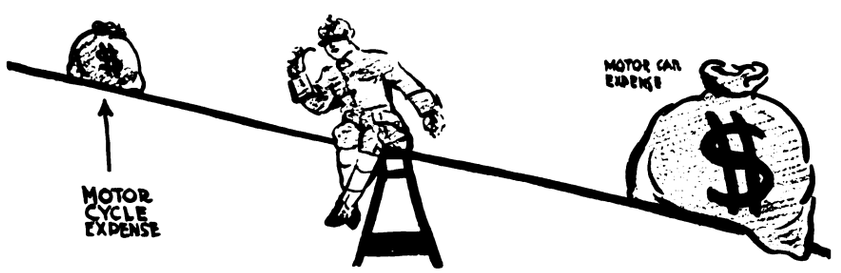
It is interesting to note the degree of consistency shown in the two tables given above. The same consistency marks the records for all my other seasons on the motorcycle. The differences were so small as to be almost insignificant.

During March, 1912, I purchased my new motorcycle as usual, the latest and most powerful mount obtainable, but in May I became possessed of a motor car and I decided to sell the two-wheeler. The car, be it known, was neither Packard, Peerless or "Buick," but it has since shown itself deserving of the enviable reputation it holds. It was a 1912 four-cylinder model, rated at 35 h., and as with the motorcycle I got half my pleasure out of storing and washing it.

THE MOTOR CAR'S SHOWING.

In the past year I have driven the four-wheeler 10,085 miles, and as usual I have kept a strict watch on my expenditures. In considering the following table it must be borne in mind that it includes the outlay for a 1,200-mile trip to Maine with four passengers. Journeys of this kind are bound to increase the general cost of tires, gasoline, oil and upkeep to a perceptible degree.

The car equipped, cost $1,721, the insurance meant an outlay of $109.30 and storage in a garage for



Digitized by Google

seven months added $175 to the bill. I used 611 gallons of gasoline, and this, with oil, repairs, tires, tubes and minor details cost $361.63. Thus we have a total outlay of $2,366.93 for the season, less the present value of the car, $1,000. The actual cost (no interest allowed) was $1,366.93.

Now let us sum up. The actual running expense for the car was $361.63, or $0.036 per mile, for 10,085 miles. The motorcycle cost in operating expense $61.98, or $0.009 per mile, for 6,750 miles. Including storage, the car necessitated an outlay of $536.63, or $0.053 per mile, for 10,085 miles, while the motorcycle including accessories cost $85.87, or $0.0125 per mile, for 6,750 miles. The motor car, counting deterioration and insurance, cost $1,366.93 or $0.135 per mile for 10,085 miles, and the two-wheeler including deterioration was operated on a basis of $236.69, or $0.027 per mile, for 6,750 miles.

It will be seen that I averaged 17½ miles per gallon of gasoline with the car, and 44 miles per gallon with the motorcycle; that the car used oil at the rate of 102 miles per gallon, while the motorcycle ran at the rate of 643 miles per gallon.

As to the pleasure derived from the motorcycle in comparison with the motor car, each owner will have to form his opinion. Many car owners will defend their choice with a contemptuous: "Motorcycles are dirty, noisy things, and besides you are usually alone." From personal experience I can state that motorcycles are not dirtier than automobiles if the owner takes entire charge in both cases. The modern motorcycle is not noisy. Nor is it necessary to be lonesome when riding a motor two-wheeler. I have never felt so when chugging about with one boon companion. The comparative costs speak for themselves in favor of the motorcycle. You can travel anywhere that an automobile can, and possibly go into some districts where a motor car could not travel—and you can get there more quickly.

Seven Perfect Scorers in 24-Hour F.A.M. Grind

Thirty-Five Riders Started in First Big Run of Indiana State Organization But Only Twelve Finished and Five of These Had Lost Points—A Thunder Shower Enlivens Road Work.

INDIANAPOLIS, Ind.—Thirty-five riders started in the first annual 24-hour endurance run of the Indiana State F. A. M. on Sunday, May 18, and twelve finished. Of these seven are believed to have kept their scores intact. At latest reports two checking sheets remained to come in, but these are not likely to change the standing of the contestants whose records were perfect otherwise.

Following are the perfect score riders: I. F. Jacobs and C. A. Leander, Yale; E. G. Baker and Nelson Hodgin, Indian; Otto Sommers, John Merz and Harry Thompson, De Luxe. The others who finished the grind, but whose scores were damaged on the way: George Von Staden, Indian; C. H. Sargens, Indian; Noble Shepherd, De Luxe; V. O. Scanling, Indian, and Fred Stalnaker, Indian.

The riders were sent off at one-minute intervals, Baker and Hodgin leading the way. The first town on the route was Waverly. On this stretch the roads were good and a lively pace was set. Near Gosport the roads were poorer, but the boys managed to keep their machines on the jump. A few riders became confused and got off the route before reaching Spencer, the checking station. As the roadsters approached Terre Haute a thunder shower struck the district and left the roads with a layer of mud and numerous miniature lakes. At Terre Haute, however, all the contestants who counted upon finishing the run were on schedule and ready for more hard going. Several had damaged their machines in spills and had ridden on to Terre Haute although it was evident that they would not be able to finish.

As Rockville was reached darkness fell and the boys trimmed up their headlights. The night schedule was 12 miles an hour and it proved easy. Nearly all the riders were ahead of the schedule and daylight found them in good humor. From Frankfort, through Alexander, Richmond and Greenfield to Indianapolis and the home checking station the trip was marked by consistent work on the part of the survivors. There were some spills, of course, and a few instances of pure hard luck, but the squad rode on gamely and those who got through felt that they had earned their laurels. The scores were as follows:

E. G. Baker, Indian, 1,000 points; N. J. Hodgin, Indian, 1,000 points; I. F. Jacobs, Yale, 1,000 points; William Bailey, Yale, out near Indianapolis (short-circuited magneto four miles from home); H. E. Thompson, De Luxe, 1,000 points; Noble Shepherd, De Luxe, 968 points (16 minutes late at Richmond); Otto Sommers, De Luxe, 1,000 points; John E. Merz, De Luxe, 1,000 points; W. J. Denny, Indian, out at Frankfort; C. A. Leander, Yale, 1,000 points; E. V. Oberting, Indian, out at Alexander; Forrest M. Turner, Indian, out at Richmond; T. Constable, Merkel, out at Frankfort; F. Ellinghausen, Harley-Davidson, out at Frankfort; R. L. Hultgren, Jr., Dayton, out at Frankfort, R. H. Larsh, Dayton, out at Frankfort; George Von Stader, Indian, 988 (six minutes late at Richmond); C. H. Sargent, Indian, 986 (seven minutes late at Richmond).

Others who left the ranks at Frankfort were: J. C. Carr, Reading-Standard; Minor Ennis, Indian; Fred Dyer, Indian; F. D. Thompson, Indian; E. Chandler, Indian; A. W. Lee, Indian; Harry Clay, Indian; Paul Brede, Indian; J. E. Early, Harley-Davidson; Charles Mark, Indian; W. Simon, Indian; O. Hammel, Indian; D. Staub, Indian; C. C. Palmer, Indian, out at Richmond; A. C. Furgeson, Excelsior, out at Richmond; V. O. Scanling, Indian, 992 (four minutes late at Richmond); F. A. Stalnaker, Indian, 992 (four minutes late at Richmond).

A notable feature of the run was the remarkable performance of the Spacke De Luxe motorcycle motors, made in Indianapolis, which are used as standard equipment by many motorcycle manufacturers.

Six motorcycles using De Luxe motors were entered in the run and of the six three finished with perfect scores, one was penalized a few points due to a shortage of gasoline, and the other two dropped out of the run, because of defects in the motorcycle frames.

In each of the six cases, however, the De Luxe motors ran perfectly, and as far as the motor was concerned all of these motorcycles could have finished with perfect scores. In addition to the four De Luxe entrants the two Dayton machines carried Spacke motors and experienced no mechanical trouble.

McLain Remains State Commissioner

Indianapolis Booster is Re-Elected at First Convention of Indiana F. A. M. Body—Officers Are Named and Delegates Chosen.

INDIANAPOLIS, Ind.—At the first annual convention of the Indiana F. A. M., held in this city May 16-17, twelve delegates were elected to represent the state organization at the coming national assembly of the Federation in Denver. Each of the delegates will make the trip to the convention city by motorcycle. The Indiana representatives have been instructed with reference to a number of reforms favored by the state body of the F. A. M., chief among these being a suggestion that the constitution be amended to provide for returning to state organizations a percentage of the funds turned in by them to the parent body. It is argued that in this way state officials would be enabled to carry through their work on an improved basis and that the riderss would feel that they were getting more direct returns.

O. F. McLain, state F. A. M. commissioner, whose activity was largely responsible for bringing about the first convention of the Indiana riders, was unanimously re-elected for another term. Delegates from nearly every county in the state were present at the Indianapolis meeting and the organization was placed on a sound footing. Officers were elected as follows: E. P. Whitmer, secretary; Charles Wyatt, treasurer; Thurman Constable, of Union City, chairman of the Competition Committee; E. E. Stillabower, of Columbus, chairman of the Press Committee; Fred Stalnaker, of Terre Haute, chairman of the Legal Action Committee; C. W. Zoller, of Muncie, chairman of the Membership Committee, and J. H. Kinney, of Indianapolis, State Referee.

Following are the twelve delegates who will represent the Indiana organization at the national F. A. M. assembly: O. F. McLain, Erwin G. Baker, John Merz, David Bauman, Ray Hoffstatter, E. P. Whitmer, John Carr and Walter Denny, of Indianapolis; J. E. Early and W. Z. Retz, of Muncie; G. C. Palmer, of Chalmers and E. V. Oberting, of Lawrenceburg.

The convention opened Friday evening, May 16, at the Denison Hotel and was marked by addresses by State Commissioner O. F. McLain, F. A. M. Director F. L. Willis, Annis Burk (representing Mayor Shank), J. H. Kinney, Jesse Campbell and others.

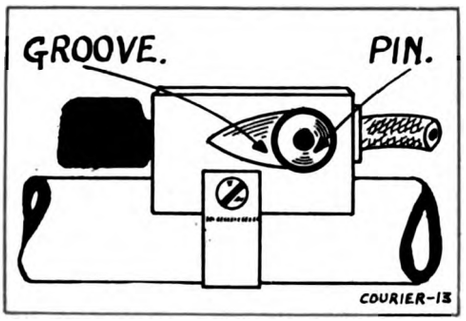
TIPS And TOPICS

THERE are magneto switches and magneto switches. Some are good only for racing or looks, and others are really dependable for road riding. The former class involves a spring blade, having a button on one end, which the rider presses against the bar when he wishes to short-circuit the magneto, and is very effective as long as the blade or contact-piece is actually making contact with the handle-bar. But the spring of the blade is pretty strong and the thumb soon tires of the constant pressure—usually before the motor is reduced enough in speed to prevent its picking up when the magneto is again on open circuit. And when the rider releases the button, we have strenuous reports of muffler-fired charges, or as I have several times seen (and heard), we may find the mufflers setting out on a short trip by themselves and leaving the end of the exhaust pipe projecting lonesomely under the bottom-bracket. The rider then has to retrieve the piping-hot silencing device, which he usually does with the toe of his boot, or sadly glean the fragments of "the most effective muffler on the market" and continue with a permanent cut-out, to the annoyance of others and at the risk of arrest.

This is hardly the proper form of switch, to my mind, and certainly gives no comfort in ordinary use. The throw-type is as effective and is positive. When it is thrown the magneto is short-circuited or not, there is no off-and-on business, and thumb pressure isn't relied upon. By the throw-type, I mean that the switch blade is pivoted at the front and moves horizontally on an insulated block. At one side of this block is a metal piece which is electrically connected to the handle-bar and the magneto is switched off when the blade contacts with the metal piece. It's an easy matter to twitch the blade over into contact with the metal piece, and when it's there the short-circuit is genuine.

SWITCH AND SAFEGUARD.

USUALLY the contact is exposed to the air and the blade has a very short throw, so that moisture or dirt have an opportunity to cause short-circuits by getting in between the blade and the contact. The better form has a cover or top piece which prevents this, and on one machine I have fitted an additional part which acts as an "anti-crook" or safeguard. Through the ebonite body of the device I ran a steel pin whose inner end contacts with the end of the switch-blade when it is pushed inward. This pin has a continuous contact with the handle-bar through a springy piece of metal and there is a metal knob on the outer end. The ebonite casing is grooved so that the little finger can be used to pull out the pin when the rider is ready to start.



When you want to stop by switching off, use the switch blade and follow this by pushing in the pin. I left the pin naked, so that I would not get into the habit of switching off by pushing it in; as I generally ride bare-handed the voltage of my magneto would quickly remind me as soon as I touched it, and at first I was reminded several times. The man who wants to make away with my machine will have to pull out the pin before it will start and then throw the switch. The farther from the center he moves the blade the harder it will be to start, as the center position is the running one and the end positions short-circuit the magneto. With this rigging, I do not generally feel the need of a lock. The pin with its head sticking out when the motor is running often has an irresistible attraction for "fiddlers" but the pushing in is rarely finished, owing to the magneto getting in its good work. You can see the idea from the sketch on this page.

TREATING THE FLANGES.

ONE machine that I have frequently ridden in the past is now used by its present owner and myself for trying out various "kinks." By this time its builder would not know it at first glance and both of us have been asked what machine it is. The maker heavily nickel-plated the cylinder, thus reducing the radiating power, but this we got over in course of time by wear and treatment with weak acid solutions. A bright cylinder does not, contrary to popular opinion, radiate heat so well as a dull black one, and while plated flanges are not a serious matter on a moderate-compression motor, they mean something in summer on a high-compression power-plant. So we experimented with stove blacking, grey graphite paints and enamels, and found that a dead black radiator paint helped considerably. Last summer we used to get out the machine and drive it on the hottest days, finding that the dead black surface reduced the chances of overheating way below those of the nice nickel-plated cylinder.

My partner is experimenting with a pickling bath to remove the plating and burns from the exhaust pipe, which will then also be coated dead black. We both think that this kind of finish will eventually supersede the present shiny one, which is used more for looks than service. The burns on the plating of an exhaust pipe seem to me to appeal to the color sense: maroons, browns and blacks contrast with the nickeling, but other than this the plating has no real reason for existing, any more than the gilt striping on a shoe machine or the buttons on the back of a man's coat. We are looking for efficiency these days, and appearances are not of primary importance.

How Cleveland Rider Built a Portable Garage

Twenty Dollars Was the Total Outlay for Material Used in Roomy Motorcycle Shed and Labor Added Ten Dollars to the Bill—Some Pointers on Dimensions Based on Actual Experience.

By Walter M. Dickinson.

IN one of your recent numbers you printed an interesting article dealing with the construction of a home garage for motorcycle service, but I noticed that it was not of the "knock-down" type and, as I am convinced that this style of building gives the best general results for the motorcyclist I am forwarding some data. I had built a portable motorcycle garage before your article appeared, and I am in a position to assist other riders who may be confronted by the problems that bothered me.

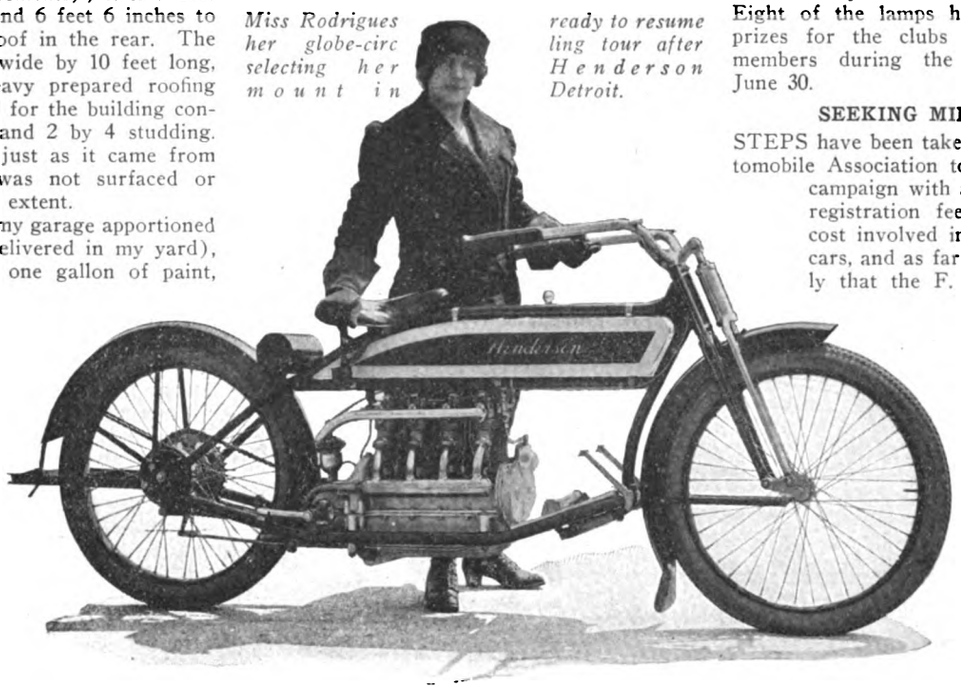
My garage is in six sections: floor, sides, back, front (including door-frame and door) and roof. When the garage is to be occupied these parts are fastened together securely with angle iron clips. Each leg of the iron clips was drilled for two 3/16-inch wood screws. Thirty of the angle iron clips were required in all.

The garage is 4 feet 6 inches wide by 9 feet long (inside measurements); it is 7 feet 6 inches high in front and 6 feet 6 inches to the under side of the roof in the rear. The roof is 5 feet 8 inches wide by 10 feet long, and is covered with heavy prepared roofing paper. The lumber used for the building consists of 1 by 8 boards and 2 by 4 studding. The material was used just as it came from the lumber yard and was not surfaced or touched up to any great extent.

I found the outlay for my garage apportioned as follows: Lumber (delivered in my yard), $15; hardware, roofing, one gallon of paint, nails, screws, angle clips, etc., $5; carpenter's time (2½ days), $10. You will see that this gives a total of $30. Two coats of paint were put on by the writer, so that these are not included in the cost of construction. Before I started work on my garage I showed my plans to a firm in my city that has made a specialty of garages for motor cars and in due time I received an estimate of $45 for the material and work. This price provided for only one coat of paint and did not include setting up the building. My price of $30 includes everything, and means that the garage is ready for the machine.

As Cleveland is centrally located and prices here are about normal I figure that my expenses are as low as they can reasonably be made, and that Mr. Weil who contributed the article in your March 20 number placed some of his estimates too low. Of course, I have no positive knowledge that this is the case, but judging from the information I obtained when preparing my plans I do not believe the material mentioned by Mr. Weil can be purchased in many sections at the prices he quotes.

My garage has a single wide door, hung on heavy hinges each of which is held by eight through bolts 3/16 of an inch in diameter. There is no window and no means of ventilation, as I do not consider either necessary. They simply make the building easier to break into. Here's another point. My garage is 9 feet long (inside measurement) while Mr. Weil's plans showed a building 8 feet long (outside measurement). I argue that it is impossible to handle a motorcycle comfortably in a garage that is only 8 feet long on the outside. In order to place the machine on the stand it is moved toward the back of the garage until the front wheel touches; then when it is pulled back to bring it up on the stand there is very little room to spare. I find that I need the length of 9 feet in my building and I do not see how any rider of a standard machine can get along with less if he wishes to avoid trouble and profanity.



Miss Rodrigues ready to resume her globe-circ ling tour after selecting her mount in Henderson Detroit.

GIRL TOURIST ON A HENDERSON

MISS DORA RODRIGUES, of Holland, who has already covered the greater part of a globe-circling tour by foot, recently visited Detroit and while there decided to complete her journey on a Henderson motorcycle. The accompanying photograph shows her ready to take to the trail on her new mount. Miss Rodrigues has visited South America, Egypt, Panama, Mexico and many sections of the United States. The girl tourist is accompanied by her brother who acts as her manager in securing engagements at motion picture houses, where she lectures on her travels. On completing her trip Miss Rodrigues will return to her home in Holland and conduct a special course in the schools, based on her observations on the globe-circling tour.

F. A. M. CLUB PRIZES

CHAIRMAN ESTERBROOK, of the F. A. M. Membership Committee, makes the following announcement relative to the standing of affiliated clubs in the contest for Old Sol lamp prizes: Norfolk (Va.) M. C., two lamps; Hyde Park (Mass.) M. C., one lamp; Newburg (N. Y.) M. C., one lamp; West Philadelphia (Pa.) M. C., one lamp; Chicago (Ill.) Indian M. C., two lamps; Coldwater (Ill.) M. C., two lamps; Coldwater (Mich.) M. C., one lamp; Bayonne (N. J.) M. C., one lamp; Hornell (N. Y.) M. C., one lamp. These returns are for the months of March and April. The contest will continue for May and June. It is open to all clubs affiliated with the F. A. M., the awards being made according to the number of new members turned in to the membership chairman. The prizes are well worth striving for, being Old Sol lamps of the No. 8 type, rated at 1,500 candlepower and donated by the makers. Eight of the lamps have been set aside as prizes for the clubs bringing in the most members during the four months ending June 30.

SEEKING MINIMUM FEES.

STEPS have been taken by the American Automobile Association to launch a nation-wide campaign with a view of keeping state registration fees down to the actual cost involved in registering the motor cars, and as far as is possible it is likely that the F. A. M. will co-operate with the automobilists in this movement. Not long ago the executive committee of the A. A. A. took up the situation, and the aid of forty-four allied state associations is now being enlisted. The National Committee on Legal Action of the F. A. M. supports the A. A. A. committee in its contentions relative to registration fees, and it is intimated that a satisfactory working understanding will soon be reached.

WITH HOUSTON RIDERS

MEMBERS of the Houston M. C., of Houston, Tex., recently made a run to Beaumont. The riders left Houston on a Saturday night and rode to Beaumont by way of Dayton and Liberty. Leaving Beaumont Sunday morning the party proceeded to Port Arthur and thence to Point Bolivar, by way of Sabine Pass. From Point Bolivar a ferry was taken to Galveston, from which point the route to Houston was over the Causeway and the Webster shell road. The 200-mile course was covered without mishap. It is considered that the route followed is one of the most interesting in Southern Texas. The Houston club played host to the Galveston M. C. not long ago.

Graton & Knight Co. Perfects Combination Drive

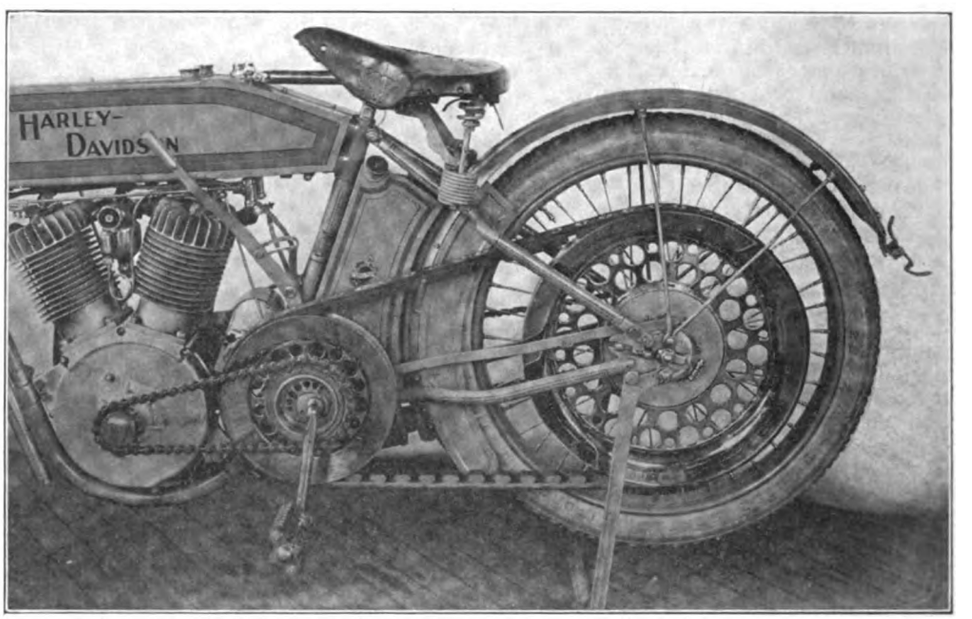
Well-Known Worcester Belt-Makers Are Successful in Adapting Chain-Cum-Belt Transmission to Harley-Davidson Twin and 1,500 Miles of Severe Running Has Brought Out No Defects.

By D. R. Hobart.

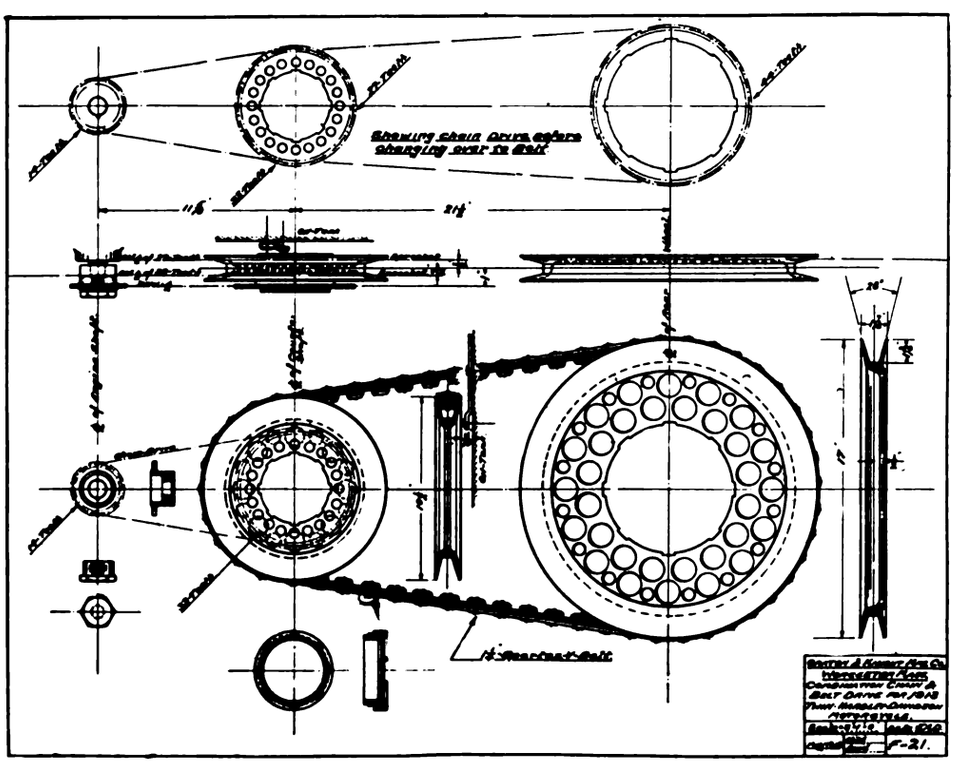
TRANSMISSION by means of the trapezoidal or V-belt has heretofore been handicapped owing to the design of the drivers which employed this form of belt. In the majority of cases a direct drive was used, the motor shaft having a small pulley on it and the rear wheel a large pulley attached, with the belt passing over both pulleys. As the gear ratios varied between 3¾ and 5½ to 1, the front pulley was rarely more than five inches in diameter and the arc of contact of the belt was insufficient to transmit the power of the larger motors. The rear pulley was necessarily near the road owing to its large diameter, and being unguarded took up dirt, pebbles and water.

COMBINATION DRIVE ADVANTAGES.

Having ridden several thousands miles on light-weight machines fitted with the combination or Douglas, and the undergear or N. S. U. drives, the writer could see no good reason why a properly constructed drive on one of these lines should not be suitable for even the highest powered motorcycles. Of the two types, the combination was thought more adaptable to most existing motorcycle transmissions with the minimum of changes. Furthermore, with the countershaft in use in the transmission, a large front pulley can be fitted thereon and the belt is gripped over such a portion of the pulley's circumference that only such slipping will occur as is provided for or is made necessary by the clutch or free engine device. The weight of the two-speed gear, when one is fitted, is centred better between the two wheels of the machine, and it is easier to detach a belt for wheel-removal than a chain. The countershaft permits of the fitting of the variable gear in that position, while whole transmission can have the clutch fitted on the motor shaft, countershaft or in the rear hub as desired. The positivity of the chain drive is obtained for the highest speed in the transmission and the flexibility of the belt drive to the rear wheel is also a desirable feature.



The Belt and Chain Transmission System; Note Construction of the Pulleys.



WHY THE V-BELT WAS USED.

Apart from the flexibility just mentioned, there are other qualities which a V-belt transmission has that recommended its use. The first of these is the low cost of upkeep as well as low first cost, there being only the belt and fastener to be considered. This brings us to the succeeding point of simplicity, and following this latter to quietness: there is no sound from such a belt running over its pulleys. Again there is minimum wear and tear on the frame and power-plant, due to the automatic "give" when an overload is suddenly applied. By flexibility is meant not only flexibility in a longitudinal direction, but also laterally. It is difficult to have the motor shaft member and rear wheel member of the transmission exactly in line, but misalignment seems to make no difference in a V-belt drive. The machine with the combination transmission mentioned below has been run with the rear and countershaft pulleys out of line for several hundred miles without appreciable effect on its efficiency, and the writer has had several mounts whose pulleys were chronically misaligned due to frame faults, but whose belts invariably remained on and drove well in spite of what in other transmissions would be a serious handicap. The points just treated were embodied in an article by the writer in the August 22, 1912, issue of MOTORCYCLE ILLUSTRATED. Nothing had been done regarding the actual choice of machine, etc., until the early part of last March.

During the period mentioned, the writer and W. W. Shoemaker, of the Graton & Knight Company, got together and determined to obtain a chain-drive machine of the countershaft type and convert it to the combination drive. The Harley-Davidson twin was chosen as being the most readily adaptable to such con-

Digitized by Google

version, and accordingly the writer took the few measurements necessary from an agent's 1913 machine and turned over the working drawings to Mr. Shoemaker. The latter sent them to A. W. Darling, mechanical engineer at the Graton & Knight factory, Worcester, Mass. The finished drawings here shown were taken direct from the original pen-sketches and improved in appearance but otherwise unchanged.

CHANGES MADE IN THE CONVERSION.

The original chain drive incorporated a 14-tooth motor sprocket with a 33-tooth countershaft sprocket for the primary and a 27-tooth countershaft and a 44-tooth rear wheel sprocket for the final drive. All chains and sprockets were removed, and on the casing of the "free-wheel" device was fitted a 17-inch V-pulley, while a 10½-inch similar pulley was fitted to the countershaft. The rear pulley was offset as shown, so that the 1¼-inch Sparton belt used would run with ample clearance throughout, and the front or countershaft pulley was fitted in line with the rear one. An adapter was fitted to the countershaft to carry the 33-tooth (original) primary countershaft sprocket, but as the primary chain-line was 9/16 of an inch further out from the motor than when originally fitted, a collar for carrying the front sprocket was fitted to the crankshaft, and the transmission was complete. The webs of the pulleys were channeled to fit in their respective positions and give a positive drive, and holes were drilled to reduce the weight as far as possible. The entire construction was carefully supervised by Mr. Darling, and the results are eminently satisfactory.

GREAT CONTACT SURFACE OBTAINED.

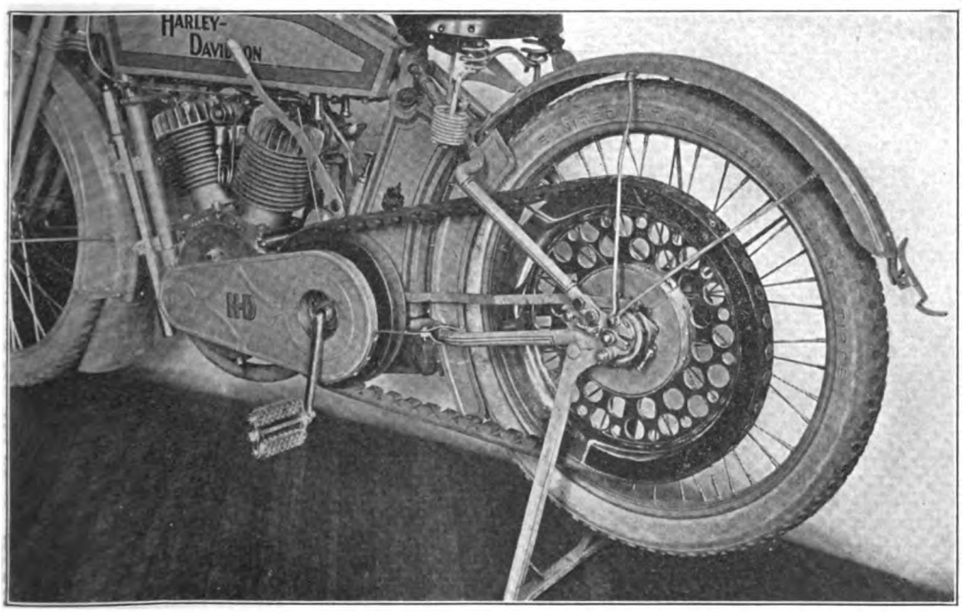
With the 10½-inch diameter front pulley, the belt contact is 16¾ inches, more than double that on any regular front V-pulley with direct drive. The rear pulley, 17 inches in diameter has nearly 30 inches of belt contact, and being well away from the ground, the chances of picking up dirt, etc., are very much reduced as compared with the present practice in belt driving. While the use of a guard is, in the writer's opinion, always desirable, it may prove to be unnecessary with the combination drive as arranged, unless heavy roads are ordinarily ridden over. The gear ratio is the same as on the chain-drive models: 3.84 to 1. The belt length is 7 feet 2 inches as compared with the 8 feet 6 inch belt used on a direct belt drive machine.

TESTS OF THE TRANSMISSION.

During the present month, the machine has been driven over 1,500 miles on Massachusetts roads to test its "standing-up" qualities, and

The Test Machine Climbing the Famous "Dead Horse" Hill in Worcester.

no changes have been found necessary. The original 5-ply belt has not stretched at all. Mounted by Messrs. Darling and Bert Ripley, the machine was run to test its hill-climbing abilities on Worcester's famous "Dead Horse Hill," among others, and every grade was taken easily with very slight throttle opening. On the 16th, Ripley started from Worcester in a heavy rain on the Harley-Davidson and arrived in Westfield 15 minutes ahead of the train which left three minutes after he started, doing the 65 miles in two hours. This trip took in Leicester Hill, one of New England's hardest for either two or four wheels, and despite the deep mud and holes, the machine made light of it. The return was made to Worcester the same day under like conditions. The rider, who used to be a chain enthusiast, says that the combination drive is the most comfortable that he has ever ridden over.



Another View of the Combination Drive, Showing the Chain Enclosed.

MAINE ROUTE BOOK

THE Maine Automobile Association has issued what is undoubtedly the most complete automobile road book of Maine that has ever been published. This book, which comprises 168 pages, is filled with touring information covering almost every section of the Pine Tree State. Pathfinding cars which were sent out by the association last year covered about 3,000 miles in Maine and 100 miles in New Hampshire, and the information contained in the road book is that compiled by these crews on their trips throughout the state.

New routes were laid out covering Maine's best scenic districts, and efforts were made to pick out the routes which were the best, or which were to be immediately improved. The book, which is handsomely illustrated and contains the most complete road map of Maine ever gotten out, is issued free of charge to all who write or apply at the Maine Automobile Association Touring Information Bureau, 12 Monument Square, Portland, Maine.

MORE OFFICIAL RED TAPE

THE Maryland Motorcycle Club of Baltimore will hereafter conduct its runs over the Washington-Baltimore pike only as far as Bladensburg, Md. This action has been taken for the reason that on previous runs to Washington several of the riders, ignorant of the recent district regulations requiring a Maryland motorcyclist to procure a District of Columbia operator's permit and registration number—even though he may visit the city only once in a year—have fallen into the clutches of the numerous police who line the entrance into the District of Columbia. These members have been fined to the limit of the law and sometimes compelled to remain in a cell over night through lack of collateral for a deposit to guarantee their appearance in court the following morning.

A BULLETIN

From the motorcycle headquarters of Spahr Bros., in Canal Dover, Ohio, comes the following timely bulletin:

"Canal Dover is strictly enforcing a speed ordinance which provides for 15 miles an hour in residence sections and 10 miles an hour in business districts. Please give warning as we wish to prevent visiting motorcyclists from encountering trouble in our city."

GEORGE M. BECKETT, a popular member of the Pittsburgh (Pa.) M. C., with his wife as a sidecar passenger, is making an extended tour of the East. His outfit consists of a 1913 Indian, T. T. model, and an Indian sidecar. Among the more important cities included in his route are Harrisburg, Philadelphia, Atlantic City, New York, Boston, Springfield, Albany and Buffalo.

Brighton Bowl No Longer Under F. A. M. Sanction

Management Complains of Treatment Received From Federation and is to Operate Under Agreement With National Cyclists' Association—Chapple and Other Riders to Work Out Their Contracts

A STORM that has been brewing for some time at the Brighton Beach motordrome broke a week ago with the announcement that the management would discontinue its affiliation with the F. A. M. and operate for the present season under an agreement with the National Cyclists' Association. At the same time statements were made by Arthur Chapple and the other riders in training at the bowl that they would abide by the decision of the track promoters and compete under whatever rules and sanctions were provided. At the present writing there is nothing more definite to be said of the situation.

Riders who compete under the conditions outlined above will automatically suspend themselves from the F. A. M., and pending this development Chairman Thornley, of the Federation Competition Committee, has not been in a position to take any action. It is stated, however, that the stand of the Competition Committee will be firm, and that no exceptional concessions will be made in an effort to conciliate the track management.

"The F. A. M. competition rules are for the observance of all track managers and riders," says Chairman Thornley, "and the national body cannot permit anyone to dictate its policy with reference to a motordrome, any more than in flat track competition. We must interpret our rules as they stand, and if they are violated we must act accordingly."

The developments at Brighton did not surprise those who have been in touch with the attitude of the management. Not long ago Manager Wellman balked at certain standard stipulations in the F. A. M. contract which was to have covered racing at Brighton for the present season, and when the F. A. M. Competition Committee refused to take things for granted the track promoters rushed their plans for a "split" from the governing body.

The riders at the track are concerned only with the business aspect of the movement. A number of them claim to have been offered contracts, and rather than forego a season's work at Brighton they have decided to "stick." They are under the impression that if they left Brighton the management there could have them barred from other board tracks throughout the country and that they would be deprived of opportunities for competition. However this may be, Art. Chapple and his squad of colts announce their intention to work out their contracts.

"Chap," who is the only seasoned speedster in the present Brighton squad, states his case briefly: "I have a contract here if I stick," he explains, "but if I pack up and leave to keep within the F. A. M. regulations I'll be out of a job. The season is open now and the time is at hand for me to garner the shekels. I don't like this talk about an 'outlaw' movement, but from a business viewpoint I don't see how I would be justified in throwing up my contract. I'm for harmony if we can have it, but if we can't I want to keep on riding just the same." This expresses the sentiment of the other riders at the bowl.

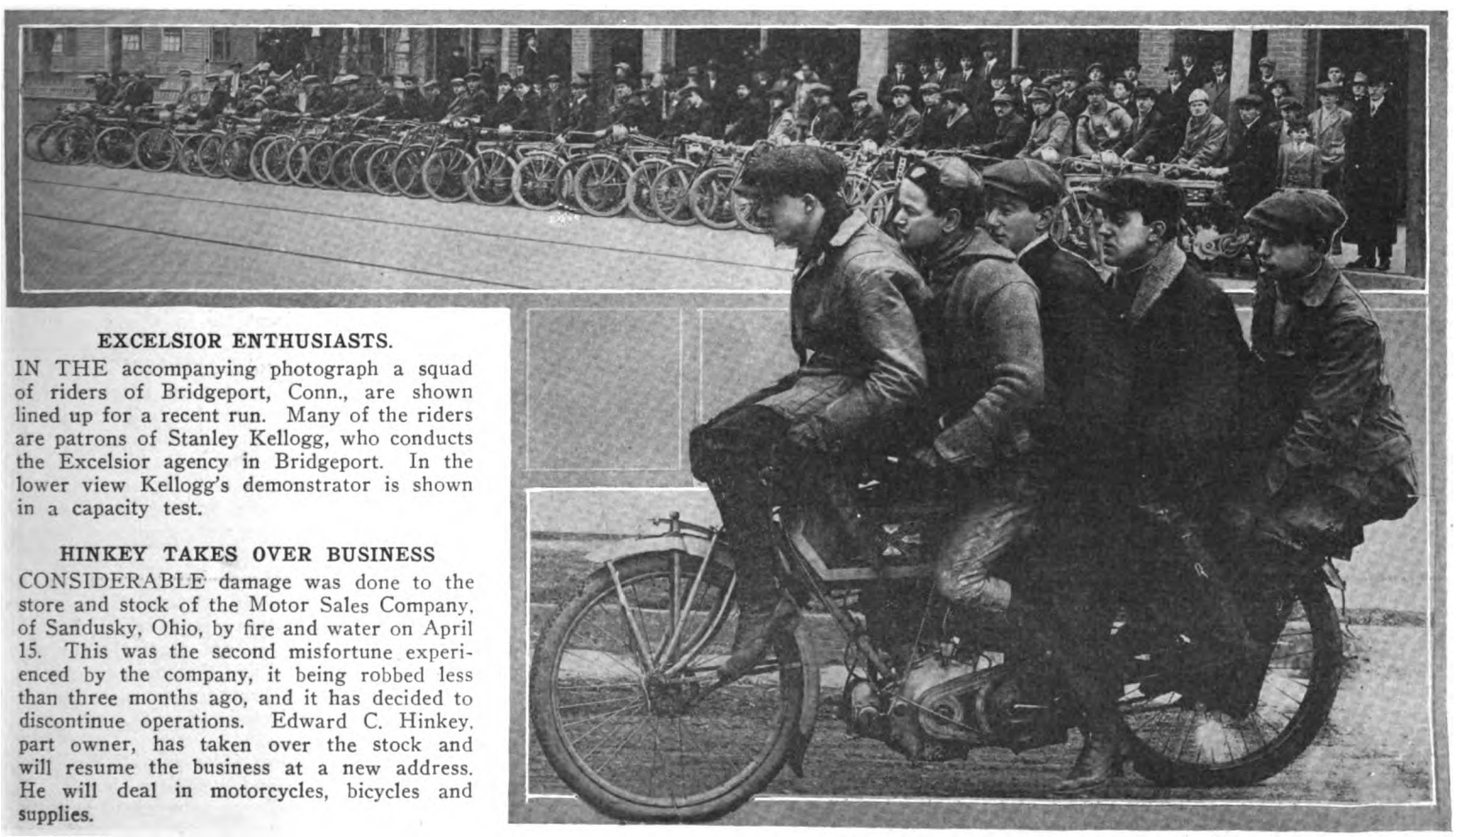
Try-outs have been held at Brighton for two weeks past and the opening is booked for May 30. It is understood that Lawson Robertson, the Irish American A. C. trainer, has been named by the N. C. A. to act as referee at the track. Nothing is known of the terms upon which the cyclists' organization has taken the track under its wing.

While the National Cyclists' Association has been flirting with the Brighton Beach boys a squad of its own members, including some of the best-known bicycle speedsters in the East, has split away from the organization and formed a new union which has been incorporated under the laws of New Jersey. Some of the riders concerned in the kick-up have been riding at the Newark (N. J.) Velodrome which is just across the street from the motordrome at Electric Park. Now that provision has been made for bicycle racing at the motordrome the new union of bicyclists will hold their meets there and run in competition with their former friends across the way.

There was nothing new about the N. C. A. split. The riders who have left felt that they were not being treated fairly and they simply packed up and moved across the street to the rival track, where their first meet will be staged on Decoration Day. The new organization is known as the American Racing Cyclists' Union.

CANADIAN GOODRICH BRANCH

THE B. F. Goodrich Company, Akron, O., will build a factory at St. Catherines, Ont., to employ about 1,000 men. The town has given the company 17 acres of land and fixed the assessment at $10,000 for 10 years.



EXCELSIOR ENTHUSIASTS.

IN THE accompanying photograph a squad of riders of Bridgeport, Conn., are shown lined up for a recent run. Many of the riders are patrons of Stanley Kellogg, who conducts the Excelsior agency in Bridgeport. In the lower view Kellogg's demonstrator is shown in a capacity test.

HINKEY TAKES OVER BUSINESS

CONSIDERABLE damage was done to the store and stock of the Motor Sales Company, of Sandusky, Ohio, by fire and water on April 15. This was the second misfortune experienced by the company, it being robbed less than three months ago, and it has decided to discontinue operations. Edward C. Hinkey, part owner, has taken over the stock and will resume the business at a new address. He will deal in motorcycles, bicycles and supplies.

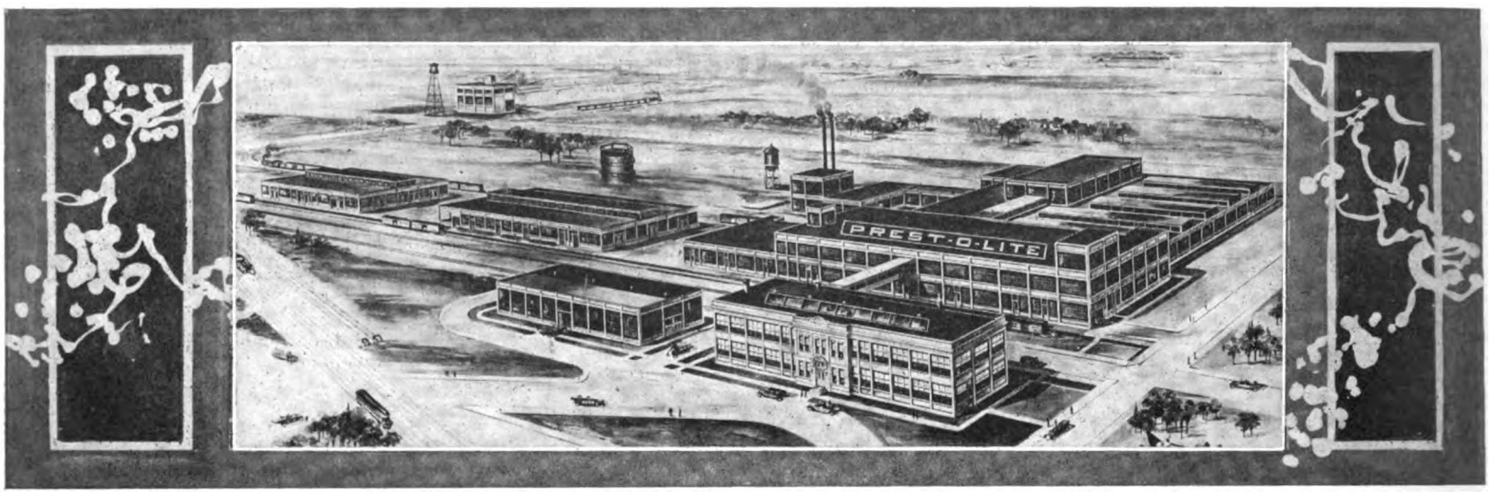
Prest-O-Lite Plant Opens in "Horseless City"

Plans For Big Industrial Center Near Indianapolis Speedway Are Advanced by Acquisition of Well-Known Manufacturing Company—New Presto Factory Has Floor Area of 275,370 Square Feet.



PLANS that were launched some time ago for a "Horseless City" near the world-famed Motor Speedway in Indianapolis were materially advanced on Monday, May 12, when the new factory and offices of the Prest-O-Lite Company were formally opened. The complete removel of this great factory from Indianapolis to the site of the new industrial community is the first important step toward assembling a group of manufacturing interests there that will insure one of the foremost automobile, motorcycle and accessory manufacturing centers in the world. Thus are the dreams of Carl G. Fisher, James A. Allison and their associates being realized.

At present there are two factories in operation in "Horseless City," those of the Prest-O-Lite Co., and the Schwartz Electric Co., the latter firm making automobile batteries and other electrical appliances. Negotiations are pending with a number of big manufacturing companies, in Indianapolis and elsewhere, and it is probable that in the near future a number of new factories, all devoted to the manufacture of automobiles, motorcycles and accessories will be under construction.

The new plant of the Prest-O-Lite Co. has a total floor space of 275,370 square feet. The group of buildings includes a general office building, factory and machine shops, generator house, charging plant, power plant, gas holder and garage. Warehouses at present under construction will, when completed, bring the total floor area considerably above 280,000 square feet. The plants vacated by the Prest-O-Lite Co., had a floor area of only 90,300 square feet. The group of new buildings cost approximately $500,000.

The main office is situated just opposite the main entrance of the Speedway, and is the center of the group of buildings. It is a two-story structure of reinforced concrete, with brick facing. The lower floor contains the accounting department and offices of the shipping department in the east section, and stock rooms and the post office take up the remainder of the lower floor. The volume of mail of the Prest-O-Lite Co. is so great that a regular government post office has been established to meet the demands made upon mail service. The offices of the sales and advertising departments are on the second floor, with private offices for each department and each executive.

Directly back of the general office building, and connected by a bridge, is the main factory where the steel tanks are made and where all the company's manufacturing, with the exception of gas-making, is conducted. This building is also of reinforced concrete, with brick facing. The estimated capacity of the factory is 1,200 Prest-O-Lites per day. A double railroad spur running along the entire front of this building and the shipping building to the east affords excellent facilities for loading and unloading cars. East of the main factory building, are the structures housing the charging plant, the power plant, and gas holder. The generator house is located about half a mile distant from the rest of the group.

The garage which houses the motor trucks and cars of Prest-O-Lite employees is located just east of the executive building.

The work of grading the grounds and approaches to the new Prest-O-Lite factory is now being carried on. A winding drive will lead from the road to the main office building and a wide expanse of lawn and gardens will cover the space between the buildings and the road.

The Prest-O-Lite Co. is holding its formal open house this week, and owing to the fact that the annual 500-mile International Sweepstakes race on the Speedway is booked May 30, thousands of visitors from all parts of the country are in Indianapolis, and hundreds of them have been made welcome at the new plant.

With the advent of new manufacturing interests to "Horseless City," work will be pushed on installing all modern conveniences. At the present time every street is piped for gas and water, and provision has been made for installing electric lights and electric street lamps. Streets have been laid out and are now being graded, preparatory to putting in curbs and sidewalks.

AN ATTRACTIVE LINE

PREMIER products, manufactured by the Premier Specialty Company, of 83-85 White street, New York City, include a full line of leather and fabric motorcycle supplies. Its line of Premier Leggings is made of black, russett, black and russett grain, sheepskin, army duck, waterproof canvas, silk mohair waterproof felt lined and unlined, black and russett pig grain and black and russett fabric leather. They are made in knee and thigh sizes and in various styles to suit the taste of the individual rider. A neat catalog which is offered by this firm describes in detail this unique line of leggings, as well as its assortment of luggage and tool bags, wrist supports, wind shields, motorcycle capes and leather and canvas tool kits.

RENOLD CHAIN DATA

THE student of transmission conditions who can find time for a little historical data will be interested in copies of letters from the London branch of the Hendee Mfg. Co. and Phelon & Moore, Ltd., the English manufacturers, that are now being circulated in this country by Peter A. Frasse & Co., of 417 Canal street, New York City, sole American agents for Renold chains. The Hendee letter calls attention to the fact that the Indian machines finishing first, second and third in the 1911 T. T. race were all equipped with the Renold products, and that the three Indians that won the team prize in the Scottish six-days' reliability trial last year were similarly fitted as to transmission.

The Phelon & Moore letter states that its machines which have carried off the team prize for four successive years in the A. C. U. six-days' trials have been regularly equipped with Renold chains, and that the company has never encountered breakage or any other defect in these transmission agents.

WHILE on a recent joint run of the Brazil and Greencastle (Ind.) motorcycle clubs to Clayton, the riders were entertained at a dinner by C. A. Edmondson, a dealer of Clayton.

Heavy Fines Imposed in Coaster Brake Suit

Corporations and Individuals Involved in Government Action Are Subjected to Fines Aggregating $81,500 for Violation of the Sherman Anti-trust Law—Admitted Operation of Combine But Denied Intent to Defraud or to Restrain Trade.

ROCHESTER, N. Y., May 27.—The six corporation defendants in the case of the United States against the New Departure Coaster Brake Co. and others entered a plea of guilty this morning to the indictments charging them with violation of the Sherman anti-trust laws. The change of plea came unexpectedly after a conference of more than four hours between Federal Judge John R. Hazel, United States District Attorney John Lord O'Brian and Attorney Daniel J. Kenefick, and during that time a decree was prepared and entered by Mr. O'Brian and signed by Judge Hazel.

When the case of the government against the eighteen individual defendants was called and moved for trial, Attorney Kenefick changed the plea from not guilty to guilty for the following: F. R. Huntington, New York City; A. F. Rockwell, Bristol, Conn.; Dewitt Page, Brooklyn; W. A. Graham, Brooklyn; Charles Glover, New Britain, Conn.; C. A. Earl, New Britain, Conn.; R. D. Webster.

ROCHESTER, N. Y., May 27.—At a session of Federal Court tonight Judge John M. Hazel imposed a fine of $81,500 on the coaster brake corporations and individual defendants. The imposition of the fine terminated a famous case. It was the largest fine in the aggregate ever imposed in the western New York district of Federal Court.

Attorney Kenefick admitted for the defendants that the association had been formed, but said that it was with no intention of violating the law. He said that the defendant firms denied all allegations, either direct or indirect, which referred to the licensing of firms to use the basic patents. He said that the New Departure company had given bona fide licenses to other firms.

District Attorney John Lord O'Brian pointed out to the judge that the defendants admitted the formation of a combination, and that they admitted controlling 85 per cent. of the bicycle and motorcycle parts trade. He said the government was entitled to a decree dissolving the association and making null and void all written and unwritten agreements between the defendants.

Mr. Kenefick answered for the individual defendants when the criminal prosecution of the individuals was moved by Attorney O'Brian. Three of the defendants pleaded nole contendre. They are Edward E. Jackson, Jr., New Britain, Conn.; G. P. Moore, Chicago, and C. F. Treadway, Bristol, Conn. Their claim is that they had nothing to do with the affairs of their alleged companies.

The fines imposed follow: Companies—New Departure Manufacturing Company, Bristol, Conn., $10,000; Corbin Screw Corporation, New Britain, Conn., $10,000; Eclipse Machine Company, Elmira, N. Y., $10,000; Aurora Automatic Machinery Company, Chicago, $2,000; Miami Cycle and Manufacturing Company, Middletown, Ohio, $10,000; Buffalo Metal Goods Company, Buffalo, $2,000. Individuals—Albert F. Rockwell, $5,000; Edward E. Jackson, Jr., $3,500; Frederick R. Huntington, $5,000; Dewitt Page, $5,000; Charles F. Treadway, $1,000; William A. Graham, $2,000; Gates P. Moore, $1,000; Charles Glover, $4,000; Clarence A. Earl, $4,000; Kelly R. Jacoby, $4,000; Ralph D. Webster, $3,000, and Emmet M. Jackson, suspended sentence.

The companies and individuals in the case were: The New Departure Manufacturing Company, the Miami Cycle and Manufacturing Company, the Corbin Screw Corporation, the Aurora Automatic Machinery Company, the Eclipse Machine Company, Buffalo Metal Goods Company, Edward E. Jackson, Jr., F. R. Huntington, A. F. Rockwell, Dewitt Page, C. T. Treadway, W. A. Graham, G. P. Moore, Charles Glover, C. A. Earl, D. L. Whittier, R. D. Webster, L. E. Whittier, Simon Florsheim, J. D. Jurloy, K. R. Jacoby, J. P. Druillard, E. M. Jackson and F. C. Atherton.

The following decree was agreed to by both defendants and the government, and was signed by Judge Hazel:

"That the combination and association entered into by the defendants herein in or about the month of July, 1908, in relation to the manufacture, sale and shipment in interstate and foreign commerce of bicycle and motorcycle coaster brakes and each and all of the constitutional parts of the mechanism thereof, front and rear hubs, sprokets, and built-up wheels, constituted and is a combination in restraint of trade and an attempt to monopolize such trade in the several states and with foreign nations in violation of Section 1 of said trust act, and said combination and association is hereby declared illegal and void, and each and all of said defendants are hereby jointly and severally perpetually enjoined, restrained and forbidden from further engaging in or attempting to carry out in any respect the affairs and purposes of said combination and association."

The decree this morning does not prohibit the New Departure company from licensing other firms to use its patents. Former Judge Daniel J. Kenefick, who appeared for the defendants, said that they did admit forming an association, but denied that it was with the intention of violating the law. He also denied all allegations which referred to the licensing of firms to use the basic patent. The granting of licenses was the point the defendants hoped to gain in the action and, according to the ruling today, this may contine so long as it is between individuals and not through the channels of any combination.

John Lord O'Brian, who conducted the case for the government, was careful to point out that the decree agreed upon today does not hinder in any way the prosecution of criminal suits against the individual defendants.

BUFFALO, N. Y., May 27.—The civil suit against the so-called "Coaster Brake Trust" was settled last week by the voluntary dissolution of the companies forming the alleged combination. The individuals indicted requested that the indictments be quashed. This United States Attorney John Lord O'Brian declined to do, and the arraignment at Rochester today followed.

A SUNDAY run to Lamoore was held on May 18 by the Madera (Cal.) M. C.

Kirk Becomes Thor Sales Manager

CHICAGO, May 25.—After twenty years of consistent activity on the staff of the Excelsior Motor, Mfg. and Supply Co., during which he advanced from a salesman to sales manager, H. N. Kirk has resigned and will occupy a similar position in the Thor organization after he has enjoyed a brief rest. It is indicative of Mr. Kirk's wholesome policy and the broad attitude of the Excelsior company that the change is attended by mutual good feeling, and that the genial booster will carry with him to his new post the best wishes of his former associates.

With Mr. Kirk at the head of its sales organization the Aurora Automatic Machinery Company plans to devote more attention to Thor interests and to provide for expansion along broader lines than in the past. The company is engaged in the manufacture of pneumatic tools as well as motorcycles, and the heavy demands made upon both its mechanical and executive departments have not permitted of such concentration upon the sturdy Thor two-wheeler as will now be possible.

Mr. Kirk was at one time the only salesman for the Excelsior, but as the company developed he advanced to the position of manager of sales, holding this title throughout the changes which finally brought the business into the hands of Ignatz Schwinn. His friends and acquaintances in trade circles are legion.

ECLIPSE

The Brake You Can Trust

Confidence!

Ah! What a superb feeling of absolute delight the rider experiences while coasting down some steep hill, with the cool breeze whistling past him, a great panorama of rolling hills beneath him and, best of all, an ***absolute riding confidence,*** born of the knowledge that in an emergency he can bring his mount to an abrupt halt—in its own length. It is equipped with the ECLIPSE PERFECTION MULTIPLE DISC BRAKE.

The Eclipse Perfection Multiple Disc Brake is stronger, proportionately, than the most powerful automobile brake ever made.

It has a braking surface of more than 100 square inches. That means for every three and a half pounds weight there is one square inch of braking surface.

THE MOST POWERFUL AUTOMOBILE BRAKE MADE MUST WITHSTAND 9½ pounds weight to the SQUARE INCH.

For every use to which a brake may be put, side-car, tandem and solo riding, on the steepest gradients, the ECLIPSE BRAKE works with unfailing accuracy and immediacy. Its ball-bearing construction, combined with its ideal lubrication system, makes it practically indestructible.

Riders—ask your dealer to show you the perfect action of the Eclipse. He'll be **proud** to show it to you.

Eclipse Machine Company

MOTORCYCLE ILLUSTRATED

Published every other Thursday at 51 Chambers Street, New York. Home subscriptions, $1.00 a year; foreign, $2.00; 10 cents a copy.

TELEPHONES 3690 AND 3691 WORTH.

Entered as second class matter July 6, 1908, at the Post Office at New York, N. Y., under Act of Congress March 3, 1879.

J. LEO SAUER, President.
H. N. CONDICT, Secretary.

WESTERN REPRESENTATIVE:

HARRY G. JACOBS

1220 First National Bank Building, Chicago. Telephones 5908 Central and Randolph 1022.

PAID CIRCULATION THIS ISSUE, 13,825 COPIES.

IMPORTANT.

OWING to its large circulation, it requires two full days of 24 hours each, after the last form has closed, to print, bind and mail a full edition of MOTORCYCLE ILLUSTRATED. In view also of the fact that this publication is read in more than 2,400 different cities, towns and villages in the United States, its wide distribution demands that each issue be placed in the mails not later than noon every other Thursday, the date of publication. In order to make the mails at this time, forms must close not later than 6 p. m. Tuesday, and advertising copy cannot, therefore, be handled if received later than Tuesday morning.

RECEIPT OF TEXT MATTER.

This applies also to text matter. Photographs should reach us not later than Monday morning preceding each date of issue. They will be given better attention if reaching us the Saturday preceding.

CORRESPONDENCE.

MOTORCYCLE ILLUSTRATED requires correspondence and subscription agents in many towns where the paper is not already so represented; we pay a liberal commission to subscription agents, and the best space rates for text-matter, drawings and photographs.

PHOTOGRAPHS.

Drawings, photographs and manuscript not suitable for publication will be returned if sufficient stamps are enclosed for the purpose. In every case, photographs should be plainly marked, so that they may be properly identified.

TITLES FOR PHOTOGRAPHS.

WITH the touring and racing season at hand again photographs are deluging the Editor's desk and it becomes necessary to call special attention to the paragraph above relative to such contributions. Every mail brings a number of photographs with nothing to identify them but the postmark on the envelope, and for this reason it is impossible to use them no matter how striking they may be. Nor can the Editor be expected to return them.

The result is as unsatisfactory in this office as it must be to the contributor, for the pictures are wasted. Mark every photo clearly on the back, give your address and state whether the views are to be returned. Do not mark the face of the picture in any way. The Editor appreciates your display of interest and aims to co-operate with you, but he is bucking a prohibitive handicap unless you let him know of your whereabouts.

THE F. A. M. AND THE BOARD TRACKS.

TO all appearances, the F. A. M.-Board Track situation is rapidly approaching a crisis. It is more than probable that this season will witness either a readjustment of the relations now existing between the Federation and the board track owners or, on the other hand, possibly the end of the present alliance. Already one board track owner, whose F. A. M. affiliations had heretofore been of the involuntary sort, has decided to attempt a breaking away from the motorcycle sport-governing body. Neither his action nor his attitude are of themselves of very great importance, although the situation at Brighton and Philadelphia may be worth a study as possibly indicating the development of similar conditions in other board track centers.

THE QUESTION AT ISSUE VERSUS PERSONAL DIFFERENCES.

IT is not so much a question whether the board track owners are desirous of continuing their alliance with the F. A. M. as whether the Federation will see fit to continue the present arrangement with the board track people. Whatever the malcontents have to say on this score, the motordrome proprietors need the F. A. M. more than the latter organization requires the revenue secured from board track franchises and sanctions. The Brighton episode is more of a personal matter than anything else, and does not involve any fundamental principles in the relations of the Federation with the manager of the board track. The latter has simply seen fit to take advantage of a difference of opinion with the Chairman of the Competition Committee. Chairman Thornley would enforce the rule providing that contracts with professional racing men should plainly state that all competitions are to be conducted under the rules and regulations of the Federation of American Motorcyclists.

There is nothing arbitrary in this insistence on the part of the Competition Committee Chairman, although the opposition claims that his general attitude has been distasteful. However, control of any kind is seldom acceptable to those who are to be controlled. Arrangements of mutual advantage are seldom possible without concessions on both sides, and the fact that the Beach track gentlemen are unwilling to make these concessions is largely responsible for their determination to "go it alone."

BOARD TRACK OWNERS NEED HELP OF THE F. A. M.

THIS situation, however, cannot continue indefinitely. As above intimated, the "insurgents" must not exaggerate the significance of their insurgency. They may think it quite ridiculous for anyone to contend that they cannot get along without at least the moral assistance of the national body. Their rebellion, if persisted in long enough, will go a long way towards demonstrating the truth of this claim. In the first place, they will find that the beneficent control exercised by the F. A. M. over the riders is a very important factor and most helpful to every one having to handle motorcycle competitors. They may also have occasion to learn, as they should already know, that the fact that a large national body is regulating the sport has helped not a little to make that sport possible, despite a number of unfortunate though unavoidable accidents. Should the F. A. M. ever see fit to antagonize board track racing, it will promptly cease to be possible. Without the control and regulation of an organization which is interested in something more than the proceeds, board track racing would soon become the target of legislative bodies in all parts of the country.

WAYS IN WHICH THE FEDERATION IS IN POSITION TO HELP.

DESPITE all that has occurred heretofore, the F. A. M. is best qualified to try to make board track racing safe. Not because it is the F. A. M. nor that its officials know just what ought to be done, but rather for the reason that the Federation represents an element whose point of view is somewhat broader than that of the man who is constantly watching the gate receipts. The latter, if left to himself, and with all due respect for some of those who are interested in the business, would soon spoil a good thing. Control by the F. A. M. may be distasteful to the board track people, but the wise ones among them realize that it's just what they need, and with the right kind of co-operation all around, it may be, as it should be, possible to solve the problem in such a way as to satisfy the widely divergent requirements of the organization, the board track owners, the riders, and the general public.

CO-OPERATION NECESSARY TO SAVE THE SITUATION.

IN sum and substance, the F. A. M. is concerned, not at all with the fact whether the board track owners want to continue their alliance with the organization, but whether they are willing and able to make board track racing so reasonably safe as to justify the Federation's assuming any of the responsibility. We trust that all the motordrome owners will soon come to regard the situation in that light. If not, it is our opinion that the Federation will more than welcome the opportunity to let them work out their own destruction.

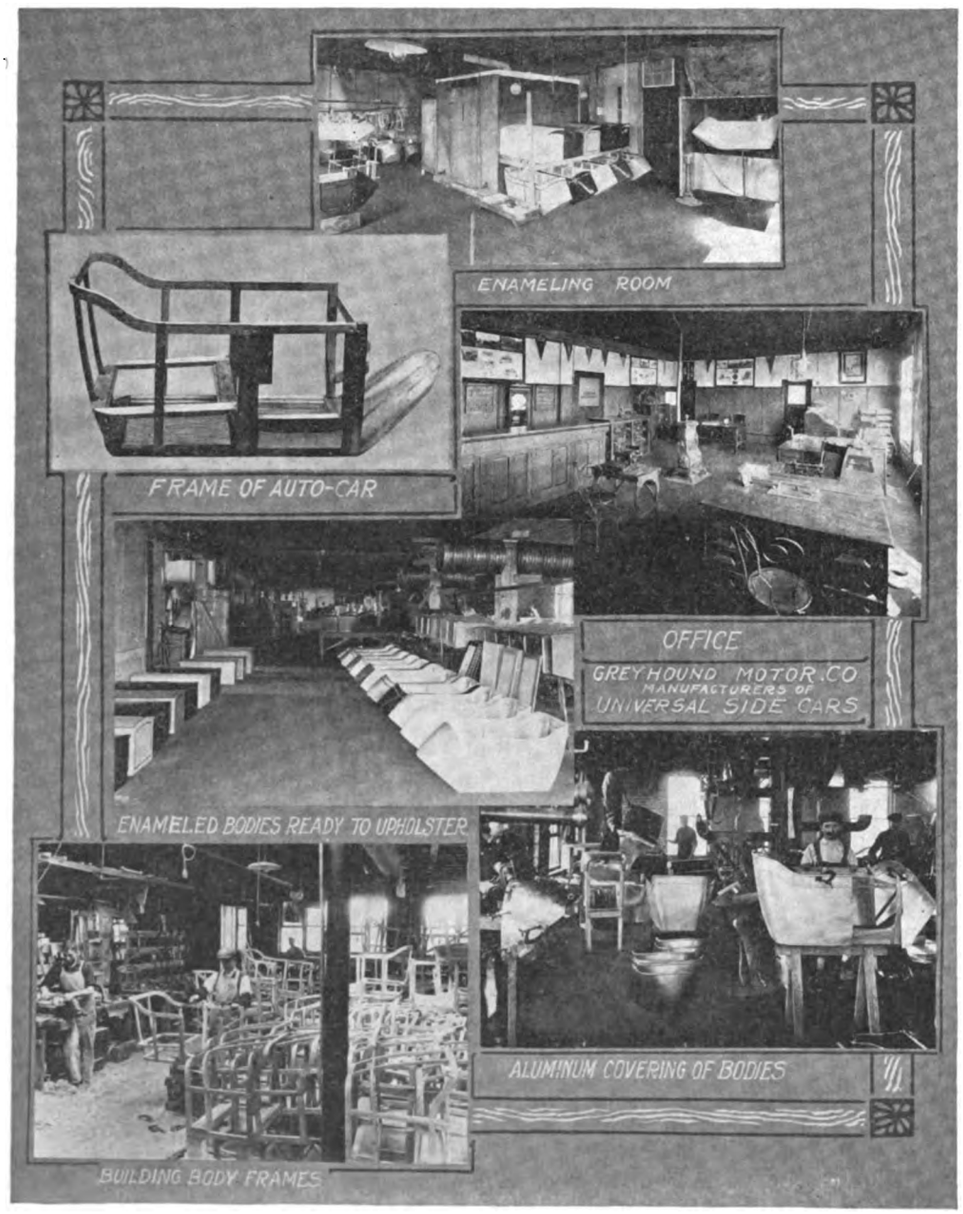
A Glimpse of Greyhound Sidecars in the Making

Eight Busy Departments Are Required in Buffalo Factory and Extreme Care Marks All the Processes from Machining the Steel Castings of the Frame to Upholstering the Roomy "Auto-Car" Bodies.

SINCE the factory of the Greyhound Motor Company, in Buffalo, N. Y., is probably the largest in this country to be devoted exclusively to the manufacture of sidecars considerable interest attaches to the arrangement of the various departments and the processes by which the comfortable third-wheelers are made ready for the rider. As is generally known, the Greyhound firm has had fourteen years' experience in the manufacture of motorcycles, and thus it is in a position to gauge the requirements of riders. In addition it has been fortunate in obtaining some of the ablest designers and mechanics in the industry and these manufacturing advantages are reflected in its products.

The Greyhound factory embodies eight departments, devoted to machining, brazing, enameling, body-building, upholstering, assembling, crating and shipping, and is very well equipped. Besides having ample machinery to turn out a perfect sidecar the company makes all its own tools, patterns and dies. In the first department named all steel castings from the foundry are placed in jigs and machined. Then the material passes to the brazing room where the frames are assembled from the machined castings and seamless steel tubing. When all the joints have been drilled and pinned they are brazed, special attention being given to this feature of the work.

After being brazed the frames are passed along to the filing department where they are carefully cleaned and smoothed. Then they go to the enameling room where the entire frame is sprayed with enamel, several coats being given. After each coat the frame is baked in an oven at 200 degrees for two hours.



The "Auto-Car" bodies, made of aluminum over ash frames, are sprayed with enamel and baked like the chassis, after which the finishing coats and the trimming are put on with a brush. Finally the enameled bodies go to the upholstering department where they are upholstered with the highest grade of imitation leather over curled hair. At the same time a floor covering of linoleum is laid. All Universal sidecars, regardless of price, are made with the same attention to detail and the same consideration for quality in both material and workmanship. The "Auto-Car" model of the Universal sidecar has the body built up of sheet aluminum over an ash frame, this work being done by coppersmiths, the highest paid men in the sidecar industry. By this method of construction the sidecar is given maximum strength and rigidity with minimum weight.

CARBO-LIGHT ACTIVITY

OWING to the rapidly increasing demand for Carbo-Light tanks the Carbo-Light Sales Company, of Anderson, Ind., has found it necessary to open a foreign sales office in New York City. Carbo-Light tanks are finding a ready market abroad and goods are now being shipped to practically every foreign country. Many agencies have been established in European countries and others are being negotiated for.

A. M. Kupfer, distributor of Henderson motorcycles on the Pacific Coast, has contracted for 2,500 Carbo-Light tanks and will act as distributor for them in coast territory. The Kupfer company has large stores in San Francisco, Los Angeles and San Diego and has 65 sub-agencies along the coast. The firm is carrying on a big motorcycle business and is prepared to handle its Carbo-Light sales on the same broad basis. Mr. Kupfer has a large supply of tanks at each of his stores so that prompt shipments can be made to Western buyers.

UNITED STATES TIRE ACTIVITY

SEVERAL of the sixteen new buildings contemplated as additions to the United States Tire Company's Detroit plant have been completed and are now being utilized. When all extensions are completed more than 1,000,000 feet of floor space will have been added. A recent statement made by Samuel P. Colt, president of the company, is to the effect that the company's sales for the first three months of this year show an increase of about forty per cent. over the corresponding period of last year.

TWO TIME-SAVERS

THE EASTON CYCLE COMPANY, 308 Ferry street, agents for the Harley-Davidson in Easton, Pa., report the sales of twelve 1913 models. Robert H. Boyer, a rural mail carrier of that city, is using a Harley-Davidson this season and a machine was also sold to the principal of the Jones business school.

EDWIN PICK, of West Bend, Wis., reports the loss of his 1912 Harley-Davidson motorcycle. The motor number is 6583.

BIG MEET FOR BENNINGS

Combination Automobile and Motorcycle Program Promises Keen Competition for Washington Enthusiasts on July 4

WASHINGTON, D. C.—The announcement of the program for the July Fourth race meet of the National Capital Motorcycle Club at Bennings, has created a considerable stir in local automobile and motorcyle circles. The prizes are larger than any heretofore offered in this vicinity, and the races have been so planned as to allow the equal distribution of awards among the various classes of machines, precluding any one individual carrying off most of the prizes. Entry blanks for the motorcycle events can be obtained from any motorcycle dealer. At a recent meeting of the club a tentative list of officials was selected for the race meet, subject to the approval of the American Automobile Association. The list of officials includes Chas. H. Cross, referee; Howard Fiske, starter; William Ullman, H. E. Duckstein and Harry Ward, judges. T. O. Wansleben, local F. A. M. representative, will referee the motorcycle races with W. F. Throop as clerk of the course, and A. Hutterly and E. C. Varela, as timers.

AN EFFECTIVE HORN

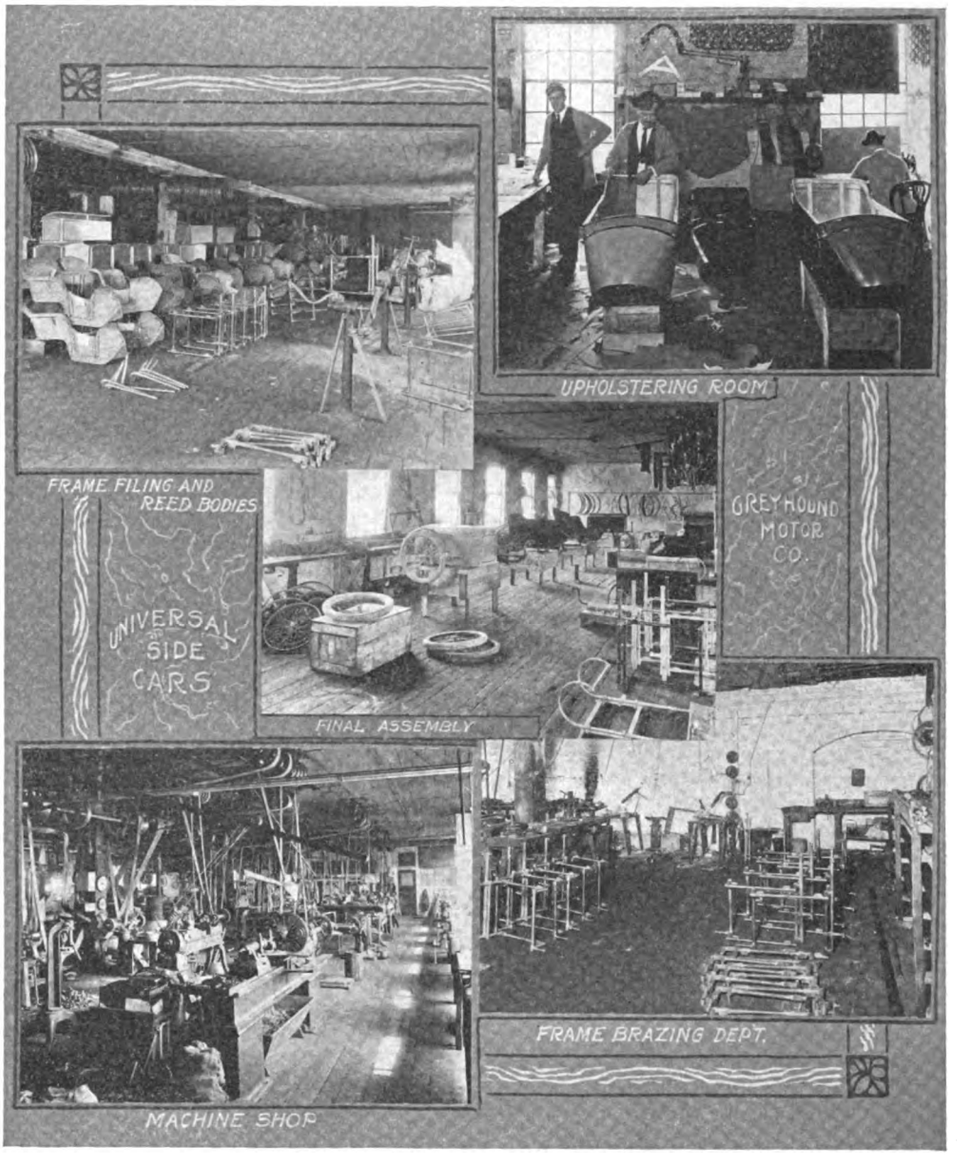
A RAPID increase in the demand for the Trinity Chimes motorcycle exhaust horn, produced by the Coming Mfg. Co., Railway Exchange, Chicago, proves beyond question that the device is living up to the claims of its makers. For the last month the company has been shipping the horns on an average of 1,000 a week. J. Lesselbaum, formerly of New York City and a member of the 1912 racing squad at Brighton Beach, is now sales manager for the Coming company and is showing a steady increase in business.

It is stated that the firm is now making a new valve for its Trinity Chimes horn. This valve obviates the necessity for cutting the exhaust pipe in two and has given excellent results under all kinds of riding conditions. The Trinity Chimes horn is a four-tone instrument, operated by a three-way valve. The horn proper is made up of square brass tubes of different lengths and slotted after the fashion of organ pipes. When the four tubes are blown as one they produce a far-reaching tone that warns without being offensive. Descriptive literature will be sent on request.

GREETINGS, "MAGGIE."

"WE'RE a typical busy American crowd in Buffalo," writes the Ericsson Manufacturing Company, manufacturer of the Berling magneto and other electrical and hardware specialties, "and like most folks who are in a hurry we use short-cuts in conversation as well as in methods. For example, we decided some time ago that the word 'magneto' was unnecessarily long, so our staff has acquired the habit of referring to our automobile ignition devices as 'Mags.' It was quite natural, therefore, when we developed our motorcycle magneto that we should call it 'Maggie.' The diminutive of Mag is Maggie, isn't it? At any rate, that's the way we figure it, and the nickname seems quite popular in our factory.

"As for 'Maggie' herself, the boys say she's trim and neat and a fine looker. And when it comes to 'sparking'—well, there may be other Maggies that are not so slow about it, but they certainly can't beat our Maggie. We are very well satisfied with her."



Further Views Showing the Manufacture of Universal Sidecars. (See Article on Preceding Page.)

YALE USERS IN THE METROPOLIS

FROM the headquarters of the Consolidated Manufacturing Company comes the following announcement showing the divers uses to which the Yale motorcycle is being put in New York City. Charles Lehmen, a real estate salesman, takes his prospective purchasers about in a sidecar which he has attached to his Yale twin. Charles Sackett, an insurance adjuster, uses a Yale to cover his long trips. Other New Yorkers using Yales in their daily work, as reported by the Consolidated company, are: Murry Cohan, a collector; J. J. Mathews, steamship booking agent; John Gallagher and A. L. Washburn, contractors; The Washington Electric Co.; Phillipson & Taussig, power printers; H. R. Kenyon, architect; W. Driscoll, metal goods dealer; S. O'Brien, automobile repairer, and Arthur E. Fisk, a map expert.

BOSCH IGNITION ABROAD

REPORTS on the Circuito del Po, a motorcycle event of national importance that was staged in Italy, April 26-27 last, show that 42 of the 57 starters used Bosch magnetos and that nine of the 14 finishers were Bosch-equipped. Six of those who completed the trial also depended upon Bosch spark plugs to carry them through. The winning team, riding English Triumphs, used both magneto and plugs of Bosch manufacture. The race was over a rough and winding course of 640 miles and considerable stormy weather was encountered.

DESCRIBING ACCESSORY LINE.

ANNOUNCEMENT is made by the Chicago Cycle Supply Company, of 22 West Lake street, Chicago, that its new catalog is now ready for distribution. The Chicago company handles a complete line of motorcycle accessories as well as supplies for the rider. The catalog contains 225 pages descriptive of the extensive line and is featured by its many illustrations.

VOTE FOR SUNDAY RACES

A MOVEMENT started by the Reform League, of Denver, to prohibit Sunday afternoon motorcycle racing was brought to a general vote at the last city election and the advocates of racing outnumbered its opponents.

A MOTORCYCLE trip from the Pacific to the Atlantic coast of Canada is being made by F. Spalding, of Fernia, B. C.

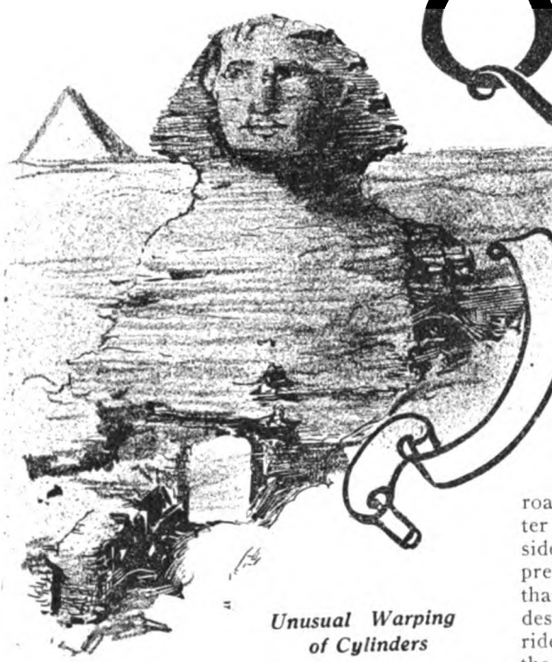
Questions & Answers



Unusual Warping of Cylinders

L. C. THOMSON.—Your discovery that your front and rear cylinders are warped differently and that you will have to replace one of them is a bit unusual but by no means unknown to engineering. If you were to measure any number of used cylinders you would see that they were by no means of the same shape as when first used by the riders. The temperature of an exploding mixture is around 1,600 degrees Centigrade, and when the exhaust is passing out, its temperature is reduced to about 400 degrees Centigrade, so that the cylinder is sometimes expanding and contracting under a temperature range of 1,200 degrees C (2,160 degrees Fahrenheit). After a cylinder has been doing this for some months, it takes a sort of *set* or warps, and unless badly overheated, retains this warp as long as it is run. A pair of cylinders which have been cast in the same lot and run together in a twin motor will take an approximately similar warp, which in the huge majority of cases has no effect on the running of the motor.

But cylinders cast a year apart are naturally not of the same composition of cast iron. In your case, the rear one has been used and has set, while the front one has not been set, and is in all probability of an entirely different grade of iron. The expansion of this new cylinder is thus different from that of the other, and running, is as you say, not satisfactory. Are you sure that the bore of both cylinders is the same? If not, have them made equal. Otherwise, we are of the same advice as the engine makers: get a matched pair of cylinders.

Keep on the Left Side

LEO ZEITHENBERG.—You are correct, driving on the left side of the road will put less strain on the motorcycle and sidecar both. When the right side is adhered to, the machine naturally leans outward, away from the vertical and toward the sidecar, so that most of the load is thrown on the car, tire wear is uneven, and strains are put on the connections and frame. On the left side of the road, the motorcycle can generally track in a relatively level portion, leaving the sidecar wheel to ride high on the camber but having the car frame carry only the passenger and its own weight as a load. But keeping to the left is wrong from a rule-of-the-road viewpoint, so that it will be necessary to cross over when oncoming traffic is seen approaching. With our rule of "keep to the right" and all kinds of road-cambers, it would perhaps seem better that sidecars should be fitted to the left side of the machine instead of the right as at present. There are, however, other reasons that point to the present arrangement as more desirable; the car is next the sidewalk, the rider is passed by oncoming traffic and not the passenger, etc.

Grinding the Valves

ARTHUR SANDERSON.—Even the motorcyclist of limited experience can grind in the valves of his motor satisfactorily if he follows simple instructions and takes sufficient time. Use fine emery flour or one of the special valve-grinding compounds, and place a rag or cotton waste between the valve chamber and cylinder to prevent the entrance of emery into the latter. It is well to use a round-handled screwdriver which may be turned to and fro between the palms of the hands in the grinding operation. Exert a slight downward pressure but strive to have it uniform, so that an even grinding action will be obtained. Remove the valve from time to time and wipe the face and seat clean so that progress may be noted. When the valve is supposed to be perfectly tight it may be tested with gasoline. If the liquid leaks through it is evident that further grinding is needed. Reaming of the valve is resorted to only when the seat or face is deeply scored, and it is not likely that this condition exists in your machine which is comparatively new. We believe the trouble will be remedied by careful grinding.

Cleaning the Belt

TOURIST.—Instructions for keeping the belt in condition have appeared in these columns from time to time, and you are correct in believing that we have recommended pure neat's-foot oil as a dressing. There are several good belt dressings on the market, but in lieu of these it is always safe to use the neat's-foot. At any rate, be certain that you are not using some preparation that is harmful to the belt. Never allow the belt to become dry. In that condition it may quickly be ruined. Apply a good dressing frequently, and avoid the use of water, gasoline or castor oil in cleaning the belt.

It is a good plan to examine the belt after each day's riding. You will often find small stones and bits of road material imbedded in its face and these should be cleaned away carefully. For this operation a dull knife blade may be used. Do not allow mud to become caked on the belt; wipe all such accumulations off after each trip and then apply the dressing before the belt has had a chance to dry.

Reviving Weak Batteries

HEMPSTEAD.—Dry cells that have been used for some time can be temporarily strengthened by removing the cover, piercing the zinc cup in a number of places and placing the cell in a solution of salammoniac. It should be allowed to remain until it has absorbed all the solution possible. Water inserted through a hole in the pitch seal will frequently act as a rejuvenator for a weak cell, as will also a solution of table salt and water. It is obvious that as soon as a cell starts to give trouble it should be replaced by a new one at the earliest possible moment, but the methods above referred to are often found helpful by battery users whose cells give trouble at a time when others are not available.

We know of no reason why you should not use an acetylene tank on your motorcycle and an electric lighting outfit on your sidecar. Many riders are using both systems. They are thus insured against an emergency and when it is necessary to detach the sidecar from the machine no thought need be given to the lighting apparatus.

Massachusetts Regulations

NEW ENGLANDER.—In Massachusetts a registration fee of $2 is exacted. A brass plate is supplied for attaching to the rear of the saddle, and for night riding a white headlight and red tail light are required. Local ordinances may be encountered here and there, but they must have been approved by the State authorities in order to be effective. The driving license is procured from the State Highway Commission. Speed limits are referred to as "reasonable and proper;" 20 miles may be attained in the country, 15 miles in suburban sections and 8 miles in cities. Penalties for violations of the law range from $10 to $25 for the first offense to $50 and $100 for the third and subsequent violations. It is also worthy of note that the use of the muffler cut-out is prohibited. Non-resident motorcyclists are exempt from registration for ten days if registered in their home state. This data is based on the latest available reports from Massachusetts and it is unlikely that changes have been made recently.

Too High a Level

F. J. HULETT.—Lower the level of the gasoline in the float chamber until the fuel is about 1/32 of an inch below the jet opening. This will probably fix up your trouble. Examine the float for punctures, etc. See the *Motorcycle Manual*, page 24. Don't operate the grips suddenly; take it easy. You can "choke" almost any motor by a sudden opening of the throttle. Try operating thus before altering the fuel level.

Left to Right: J. C. Manternach, S. W. Hartley, F. R. Wilhelmy and R. S. Bryant.

Manternach Is Standard Welding Head

Popular Booster in Steel Tube Industry Rises from Sales Manager of Hustling Cleveland Company to General Manager.

ONE of the most interesting trade changes reported of late is the appointment of J. C. Manternach, of 1472 West Clifton boulevard, Cleveland, Ohio, to the position of general manager of The Standard Welding Company, of Cleveland. Mr. Manternach succeeds Tracy W. Guthrie, resigned, who was formerly president of the Republic Iron and Steel Company, of Youngstown, Ohio.

Mr. Manternach was appointed sales manager of the Standard Welding Company by the late W. S. Gorton in April, 1910, and his present advancement is the result of his efficient and untiring efforts in the behalf of that company.

Mr. Manternach has been identified with the American steel-tube industry practically from its infancy. He began with the Pope Manufacturing Company, Hartford, Conn., in 1897, and later joined the forces of the Shelby Steel Tube Company and the National Tube Company, a subsidiary of the United States Steel Corporation. With the latter organization his promotion was so markedly rapid that it brought him to the attention of many new concerns then entering the field, among them the Standard Welding Company. Mr. Manternach, still young in years, is representative of a successful class of present-day business-men who have won fame and fortune by their experience in the school of hard-knocks. He is widely known among those connected with bicycle, motorcycle, automobile and steel-tube industries.

Mr. Manternach announces the appointment of S. W. Hartley to the position of sales manager. Mr. Hartley has been assistant sales manager of the company over two years and has been prominently identified with the engineering end of the motor-car industry from its beginning in the United States. Mr. Hartley has been associated with the Peerless Company of Cleveland, the Garford Company of Elyria and the A. O. Smith Company of Milwaukee. He is a Cornell man, well-known and well-liked throughout the automobile industry.

R. S. Bryant is named as consulting engineer. Mr. Bryant, who can unqualifiedly be called the designer of the first quick-detachable rim in America, has been in the employ of the Standard Welding Company approximately two years. He is the originator of the types of rims now being made and sold by the Standard Welding Company, and the designer of many other styles that have had notable success. He also built and perfected the first specialized machine-tools used for the manufacture of automobile rims, and many of his original designs are still without a peer. In his particular field of endeavor, Mr. Bryant ranks second to none, and is so recognized by all who are familiar with motor-car industry in America. Mr. Bryant was the founder of the Bryant Rim Company, Columbus, Ohio, which was purchased outright by the Diamond Rubber interests several years ago.

C. C. Gressle is made superintendent. Mr. Gressle has held high positions in the factory organization of the Standard Welding Company since its inception some fifteen years ago. F. R. Wilhelmy remains as auditor and credit manager, to which position he has arisen by successive steps through fourteen years of service with the company. H. E. Butcher remains in charge of the tube department.

SPLITDORF BRANCHES

ANOTHER step toward placing the service for Splitdorf electrical ignition devices upon the highest standard of efficiency was taken when O. J. Rohde of the Splitdorf Electrical Co., of New York, opened the Atlanta branch situated at 8 Harris street, corner Peachtree street. This branch was opened on May 15. It is a direct branch with all modern testing apparatus for the company's various electrical ignition outfits. They carry a complete stock of new goods and parts for every outfit they have manufactured.

On June 1, Mr. Rhode will open another branch at 290 Halsey street, Newark, N. J., along the same lines as the one recently opened in Atlanta. In July a similar branch will probably be opened for the Canadian trade with headquarters in Toronto, Ont. With the branches already established and the ones under advisement, the Splitdorf service will be found practically all over the country, where users can secure immediate attention.

ANOTHER CONTRACT FOR HOLLE

AT A recent meeting of the Board of Supervisors in San Francisco, Joseph Holle, "The Bike Doctor," was awarded a contract for twenty Harley-Davidson machines to be used by the police department. The city purchased ten Harley-Davidsons sevens months ago, and the single-trackers have given such a good account of themselves that the officials are desirous of using them to replace some of the horses now in police service.

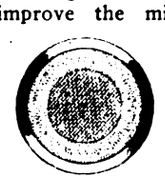
HARLEY-DAVIDSONS IN DETROIT.

TEN "5-35" Harley-Davidsons have been purchased by the Police Department of Detroit, Mich. The department plans to have the ten motorcycles serve thirty policemen, riding 24 hours a day, in three shifts of eight hours each, so that the machines will be put to a severe test.

J. W. LONG, of Bowling Green, Ohio, has taken the agency for the Harley-Davidson in Bowling Green and neighboring towns.

A NEW GAS SAVER

AN ingenious little contrivance intended to improve the mixture and permit of fuel economy is now being manufactured by the Gas Saver Sales Co., United States Rubber Building, Broadway and Fifty-eighth street, New York, and sold under the trade name "Gasosava." It replaces the gasket between the carbureter and intake pipe and embodies a fine screen and a "wick." The former is designed to break up gasoline particles and assist in vaporization, while the wick intercepts any fuel globules that would otherwise enter the intake pipe in liquid or semi-liquid form. The results claimed are marked economy due to thorough vaporization; increased mileage; minimum carbonization and uniform running.



A TOUR of the entire state of Georgia will be made during the summer by twelve members of the Atlanta Motorcycle Club.

Scientific Production of the Sturdy Yale

How the Big Toledo Factory Has Been Departmentized to Permit of Handling Material at High Speed Without Lowering the Standard of Workmanship—Importance of the Drop-Forging Shop.

IN order to maintain a high standard of manufacturing efficiency without making the cost to the consumer prohibitive leading motorcycle builders are devoting much time to the study of scientific production, and nowhere in this country is the problem receiving more systematic consideration than at the big plant of the Consolidated Mfg. Co., in Toledo, Ohio. How to obtain the best raw material, how to treat it most satisfactorily in the various departments and how to turn the finished machine out of the factory 100 per cent. efficient are question with which the Yale organization has grappled to good effect, and from end to end of the establishment every move counts.

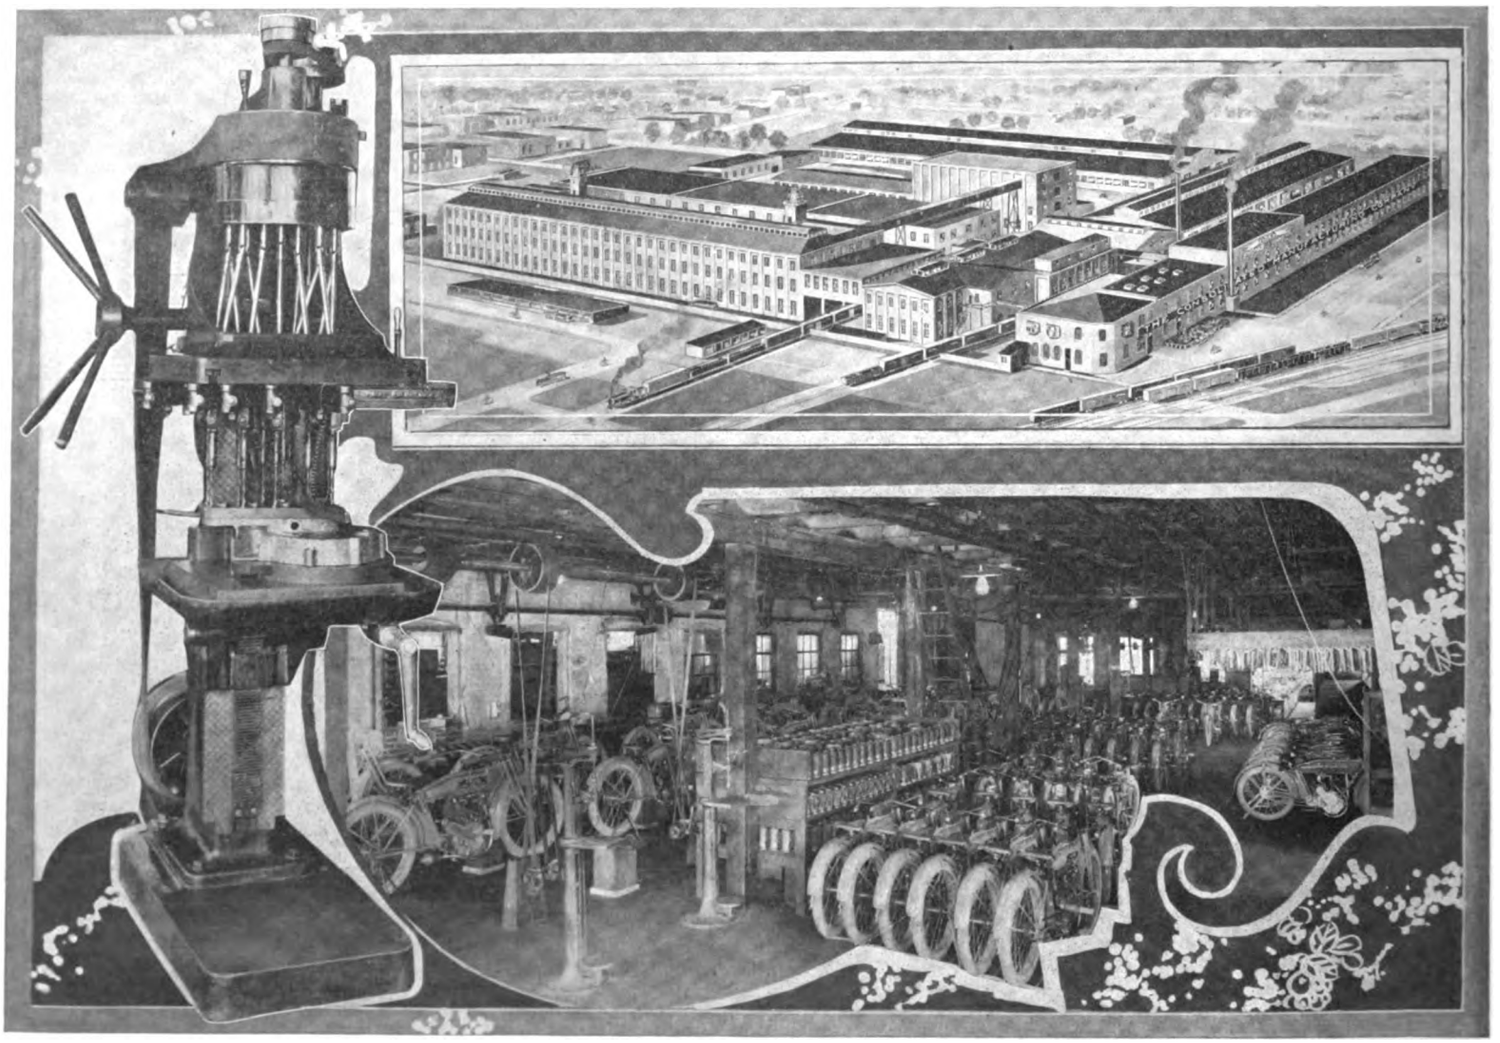
The different departments are so arranged that parts travel the shortest possible distance in going from one process to another, and at no point does a piece of material double on its course. To do this would be to waste time and energy. Machinery of the most up-to-date and effective types is used throughout the factory, so that accuracy and uniformity are assured. This uniformity not only simplifies the assembling of machines but permits of interchangeability of parts. Heald cylinder grinders turn out Yale cylinders with surprising speed and unfailing accuracy, special gear hobbers cut the helical gears for Yale motors with the same precision and automatic machines, geometric thread-cutting machines and many other special devices save time and labor and insure quality products. Multiple spindle drills, for example, do in a minute the work that would require half an hour with ordinary drill presses.

The drop-forging shop at the Yale factory affords an interesting scene. Here the big 3,000-pound hammers beat out the many forgings that go into Yale motorcycles. Heavy bars of steel are sent into this room to come out as forged frame fittings, cranks, valve dogs and other parts. The Consolidated company is the only firm operating its own drop-forging shop at present. With this system it is possible to insure a standard grade of steel and to inspect all the raw material before it is started on its way through the departments.

Cylinders and forgings are all heat-treated. The cylinder castings are first given a rough cut which removes the scale; then they are placed in special furnaces and for six hours subjected to greater heat than is ever developed by the motor when on the road. This heat treatment relieves all strains and stresses in the metal, and causes all distortion that is ever going to take place to become noticeable then and there.

It is interesting in this connection to note that cast-iron has a tendency to change its shape slightly when the scale on the surface is broken. For instance, a casting could be bored and ground with the greatest accuracy and some time later it might be found considerably out of true as a result of the scale having been cut. The Yale method eliminates trouble in this direction, however, for the cylinder casting is given every opportunity to distort before the final cuts are taken and the grinding done.

Heat treatment of frame connections and other parts renders them remarkably tough so that they easily withstand strains that would ordinarily cause a break.



Bird's-Eye View of the Yale Plant; an Impressive Scene in the Assembling Department, and One of the Big Spindle Drills.

Members of the Indian M. C., of Cincinnati, Ready for First Outing of the Season, Held Recently to Miamitown.

These Are Busy Days for Sacramento Dealers

Nearly Every Agent in the Hustling California City Has a Waiting List of Buyers and Manufacturers Are Rushing Shipments to the Coast—Sacramento M. C. and City Wheelmen Combine.

SACRAMENTO, Cal.—H. Cameron, the local Indian agent, who has been in business for the last seven years, states that he has sold 104 of the 1913 machines, and that he has forty orders to be filled as soon as his next shipment arrives. In addition to lively sales of motorcycles Cameron has found a rushing demand for sidecars, and he is of the opinion that this branch of the business will be a very important one from now on.

L. Dufout, who has charge of the repair shop that is operated in connection with Mr. Cameron's business is an expert who was sent out from the Indian factory. He has placed the repair business on a high standard. Cameron reports that shipments are much more satisfactory this year than they were in 1912.

A PERPETUAL TROPHY

THE Valvaline Oil Co. has offered a "perpetual" trophy, valued at $125, for the rider making the best time between Sacramento and Tahoe, and a number of riders of these cities are tuning up their mounts with a view of taking a chance. The road between Sacramento and Tahoe is in excellent condition and some fast trials are expected.

LANGLEY HAS WAITING LIST

WILLIAM A. LANGLEY, Excelsior agent in Sacramento, states that he has sold all the 1913 models he has been able to obtain and that there are now twenty applicants on his waiting list. Langley has already placed 60 Excelsiors in the city proper. R. Gallaway, who is in charge of Langley's repair shop, is known throughout the state as an able machinist. He has a staff of four men and manages to keep all of them on the jump.

KIMBALL-UPSON SALES

ONE OF the most active firms in southern California is the Kimball-Upson Company, of Sacramento, which has disposed of 100 Pope motorcycles during the last five months. The firm now has a shipment of 60 machines on the way and has placed an order for 90 to be shipped a month hence. During the last six months the Kimball-Upson Company has been making extensions in all directions, and now carries a large line of general sporting goods in addition to motorcycles and accessories.

R. S. Sallender, who is in charge of the motorcycle and bicycle sales department, has found business so lively of late that he has taken on Frank Murray, a well-known local motorcyclist to assist him. Frank Anderson is at the head of the Kimball-Upson repair shop.

SACRAMENTO CLUBS COMBINE

NOT LONG ago the Capital City Wheelmen, a club that has been in existence for twenty years, and the Sacramento Motorcycle Club combined and the organization is now running under the name of the Capital City Motorcycle Club. Well-fitted clubrooms have been obtained and the outlook for the club is exceedingly bright. The membership is 150 at present, and it is believed that another hundred riders will be added in a month or two. For the present the officers of the old Wheelmen's organization are acting, but there is to be an election on June 1. A racing program recently conducted by the club netted $600. At least two other race meets will be staged during the summer. The club will also hold an endurance run to Lake Tahoe and possibly as far south as Los Angeles.

SETTING GOOD EXAMPLE

SACRAMENTO COUNTY was the first in the state to bond itself for the permanent improvement of highways, and the outlook for continued interest in the roads is bright. Not long ago the county approved a heavy bond to permit of connecting all the roads throughout the county with the state highways.

DE LUXE MAKING FRIENDS

PUTZMAN & HOFFMAN, proprietors of a motorcycle establishment which was opened in Sacramento about the first of the year, are making a strong bid for business in their district. They handle the De Luxe and report satisfactory sales. About twenty of these machines are in use in the city and not long ago the Putzman & Hoffman firm was obliged to sell its demonstrator to satisfy a patron who needed his mount at once. R. R. Burton is in charge of the up-to-date repair shop operated by the firm.

THOR AT THE "MOTORAID"

ANOTHER busy Sacramento shop is the "Motoraid," a motorcycle headquarters presided over by F. Middlemiss and Mrs. G. M. Julien. This firm handles the Thor and has sold thirty machines in the last few months. An extensive business in second-hand motorcycles is also carried on, and during the six months just past no less than 150 machines have been disposed of. A registered F. A. M. repair shop is conducted, under the personal direction of Mr. Middlemiss. The firm sells Superior sidecars, made in Los Angeles, and finds a wide demand for them. They have four cars in use at the shop and manage to keep them all busy.

AHEAD OF SHIPMENTS

THE Sacramento Motorcycle Co., a new firm, headed by Cap. Scott and George Buell, is handling the Jefferson with great success. This agency has been doing business for five months and has sold all the machines that could be obtained from the factory. Mr. Buell states that arrangements have been made with the Jefferson manufacturers to ship six machines each week for the remainder of the year. The company gives special attention to repair work, this branch being in charge of Mr. Scott, a well-known rider in Sacramento and vicinity.

CLUB MEMBERSHIP DOUBLED

FIFTEEN riders made up the charter list of the Fond du lac (Wis.) M. C., organized on March 7 last, and the membership has since been doubled. The club has affiliated with the F. A. M. and is looking forward to a lively season. One or two race meets and a series of road runs are carded. The officers: H. A. Shiels, president; Henry Marcoe, vice-president; O. A. Scholl, secretary-treasurer; W. C. Caffery, road captain. The organization has taken rooms at 19-21 East First street.

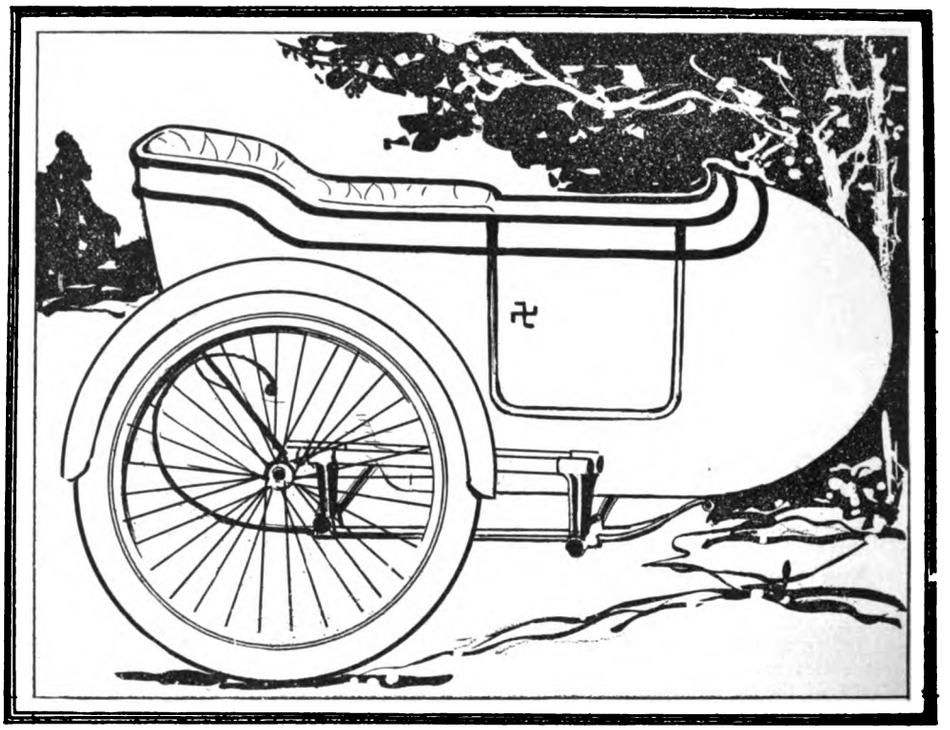
Majestic "Wind-Splitter" An Attractive Model

Worcester Firm Produces Coach-Built Sidecar Body With Genuine Canoe Front, Embodying Advanced Ideas for Both Speed and Comfort—Underslung Chassis and Sprung Upholstery.

DESPITE the fact that it is now turning out reed-body sidecars at the rate of sixty a week the Majestic Mfg. Co., of Worcester, Mass., has found time to market an attractive new model listed as the "Wind-Splitter." As the name implies, this sidecar is built with a sharp-nosed body, and is in reality the first model to be offered in this country with a genuine canoe front. From either side or front view it will be found to follow the much-talked-of canoe lines exactly, thus affording an extremely graceful sweep and at the same time reducing wind resistance to the minimum. It is claimed for the new type that it combines speed and comfort to an unprecedented degree, and there is every reason for believing that these claims will be supported in road service.

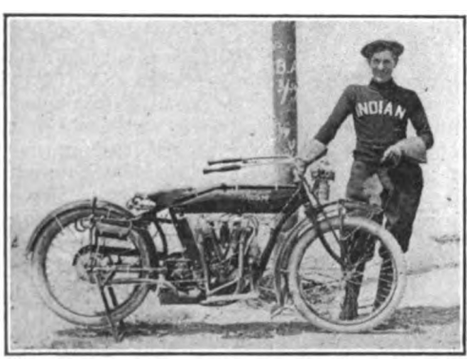
The body is of metal on a wooden frame, and special care has been taken to strengthen the latter wherever it is likely to be subjected to unusual strain. A neat side door permits of easy entrance and egress, and is so constructed that it does not detract from the artistic lines of the sidecar body. The chassis is underslung and heavily reinforced. The upholstering is of the automobile type, being both padded and sprung. Owing to the underslung construction a low center of gravity is obtained and stability and comfort-giving qualities are increased.



The attachments are Majestic drop-forgings, milled, polished, plated and buffed, and the connections permit of quick attachment or detachment. The new Majestic body will be finished in any color specified. The outfit lists at $90, and in view of the fact that the manufacturers found it necessary to expend $3,500 for special tools and machinery to produce it, the price is regarded as reasonable.

CLAFLIN CLIMBS ENSIGN PEAK

LON CLAFLIN, Indian agent in Salt Lake City, Utah, and long recognized as a daring rider, added to his laurels recently when he piloted his two-speed Indian to Ensign Peak, 7,005 feet above sea level. The climb has always been regarded as a difficult one for a person afoot, and motorcyclists have considered it entirely beyond them. The road surface is poor and some sections of the grade are little short of startling. Claflin left Eagles' Gate at 11 o'clock on a Sunday morning, with four men stationed to time him, and in eight minutes he had reached the top, placed his machine on the stand and waved his handkerchief to the timers, indicating that his feat had been successfully accomplished. The timers had accompanied Claflin to the foot of the peak. The altitude of Eagles' Gate is 4,265 feet, and the remainder of the climb, 2,740 feet, is made in two and a half miles.



Claflin on Ensign Peak.

Fred Whittler, the racing star, attempted to ride his machine to Ensign Peak some time ago but sustained several falls and failed to complete the climb. Having once made the ascent Mr. Claflin is convinced that he can do it again and is willing to wager from $100 to $1,000 that he can duplicate his recent performance, riding every foot of the distance. The accompanying picture shows Claflin and his Indian at the peak.

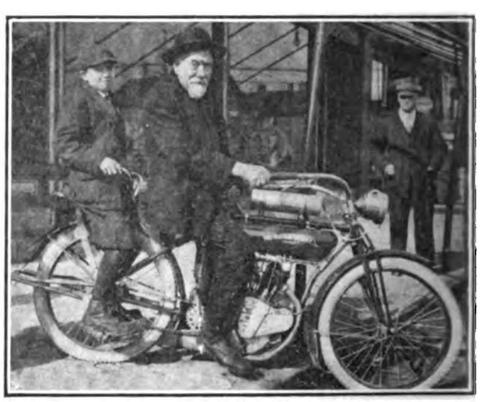
THE MOOREHOUSE FUND

FRIENDS of the late Arthur Moorehouse, the well-known English Indian rider who was killed at Brooklands, have raised a memorial fund of $1,500 which will be held in trust and the income used to maintain a free bed in the Weybridge hospital. The Hendee Manufacturing Company subscribed liberally to this fund, which will be known as the Arthur Moorehouse memorial fund.

MORE GLOBE-GIRDLERS

LESLIE EAGLES and Bruno Pilz, of Wilmette, Ill., have started a motorcycle tour of the world. The boys are nineteen years old. They expect to spend at least a year in their sight-seeing journey.

A NEW Pope agency has been placed with Marion C. Rich, of Herkimer, N. Y. Rich recently received his demonstrator and has already been successful in lining up a number of purchasers.



J. F. KILBANE, the oldest motorcycle rider in Cleveland, and his son, are shown in the accompanying photograph on their twin Merkel. Mr. Kilbane is related to Johnny Kilbane, the ring champion.

MONTANA RIDERS BUSY.

MEMBERS of the Western Montana Motorcycle Club of Missoula, recently made a run through Bitter Root Valley, to Florence. The club has been organized only a short time and a lively interest was evinced in the first run.

JEFFERSON IN NEW YORK

JEFFERSON motorcycles are now being distributed in New York City by the Lowe Motor Supplies Co., 1727 Broadway, and the firm reports that a lively interest is being aroused in this machine among metropolitan riders

Digitized by Google

A MOTOR COP'S RECORD

SEVENTY THOUSAND miles on Indians in three years, is the record of Motorcycle Officer William J. Lennon, of the Grand Rapids, Mich., Police Department, who just has been promoted to sergeant. When Lennon was notified of his advancement, he totaled his records and found that his average annual mileage was 23,333, and a year of motorcycle duty, in Grand Rapids, consists of seven months. In the three years, Lennon brought in over 400 offenders, and paid for his machines several times over.

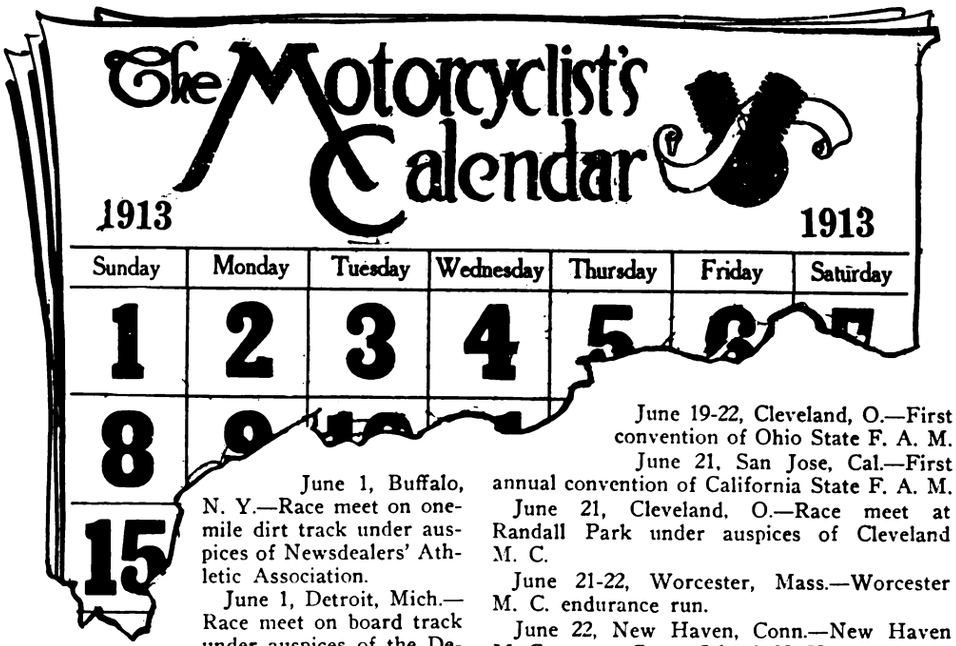
ABERNATHY KIDS ON TOUR

A LATE bulletin from the Indian factory, at Springfield, is to the effect that the famous Abernathy Kids—Louis, 13, and Temple, 9. the latter appearing in the accompanying photograph, sons of Sheriff Jack Abernathy, of Frederick, Okla., Rough Rider and friend of Theodore Roosevelt, left their home on May 25 for New York City, riding Indian motorcycles. This is not the first overland trip for the boys, as they rode to New York on ponies in 1910 to welcome Colonel Roosevelt on his return from the African hunt, and later drove a Brush runabout over the same route.

The trip which they are now making covers about 1,750 miles and they expect to reach New York by June 30, to attend the graduation of their sister. Their itinerary, subject

Temple Abernathy.

to minor changes, is as follows: Frederick, Lawton, Verden, Oklahoma City, El Reno and Enid, Okla.; Newton and Wichita, Kan.; St. Louis, Mo.; Indianapolis, Ind.; Cincinnati, Columbus, Dayton and Zanesville, O.; Wheeling, W. Va.; Cumberland and Frederick, Md; Washington, D. C.; Baltimore, Md.; Wilmington, Del.; Philadelphia, Trenton, Newark, Jersey City and New York City.



June 1, Buffalo, N. Y.—Race meet on one-mile dirt track under auspices of Newsdealers' Athletic Association.

June 1, Detroit, Mich.—Race meet on board track under auspices of the Detroit Motordrome and Amusement Co.

June 1, Cleveland, O.—Race meet on board track under auspices of the Luna Park Amusement Co.

June 1, Chicago, Ill.—Race meet under auspices of Riverview Motordrome and Amusement Co.

June 4, Cleveland, O.—Race meet at Luna Park Motordrome.

June 4, Detroit, Mich.—Race meet at Detroit Motordrome.

June 4, Chicago, Ill.—Race meet at Riverview Motordrome.

June 4-5, Rockford, Ill.—Rockford M. C. race meet.

June 4-6, Isle of Man.—Tourist Trophy races under auspices of English Auto Cycle Union.

June 7, Reading, Pa.—Race meet on one-half-mile dirt track.

June 8, Toledo, O.—Interstate Racing Association race meet.

June 7-8, Cleveland.—Race meets under auspices of Luna Park Motordrome and Amusement Co.

June 7-8, Chicago.—Race meets at Riverview Motordrome.

June 7-8, Detroit, Mich.—Race meets at Detroit Motordrome.

June 8, New Haven, Conn.—New Haven M. C. endurance run.

June 8, Newark, N. J.—New Jersey M. C. run to Tottenville, S. I.

June 9-10, Portland, Ore.—First annual convention of State F. A. M.

June 11, 14, 15, Chicago.—Motordrome race meets at Riverview.

June 11, 14, 15, Cleveland.—Races under auspices of Luna Park Motordrome & Amusement Co.

June 11, 14, 15, Detroit, Mich.—Races at Detroit Motordrome.

June 15, Trenton, N. J.—Run to South Amboy under auspices of Indian M. C.

June 16-26.—Los Angeles M. C., Sunset Ramble through Southern California.

June 19, Chicago.—Race meet at Riverview Motordrome.

June 19, Cleveland.—Races at Luna Park track.

June 19, Detroit.—Race meet at Detroit Motordrome.

June 19-22, Cleveland, O.—First convention of Ohio State F. A. M.

June 21, San Jose, Cal.—First annual convention of California State F. A. M.

June 21, Cleveland, O.—Race meet at Randall Park under auspices of Cleveland M. C.

June 21-22, Worcester, Mass.—Worcester M. C. endurance run.

June 22, New Haven, Conn.—New Haven M. C. run to Coney Island, N. Y.

June 22, Newark, N. J.—New Jersey M. C. run to West Point, N. Y.

June 22-23, Chicago.—Race meets at Riverview Motordrome.

June 22-23, Detroit.—Board track meets at Detroit.

June 22-23, Cleveland.—Motordrome meets at Cleveland.

June 29, LaPorte, Ind.—Run to Logansport under auspices of LaPorte M. C.

June 29, Trenton, N. J.—Indian M. C. run to Philadelphia.

July 1, Waterloo, Canada.—Race meet.

July 3-4-5.—First convention of New York State F. A. M. at Elmira.

July 4, La Porte, Ind.—La Porte M. C. race meet.

July 4, Elgin, Ill.—National motorcycle road race.

July 4, Grand Forks, S. D.—Road race to Fargo.

July 4, Washington, D. C.—Race meet at Bennings track under auspices of National Capital M. C.

July 4-5-6, New Haven, Conn.—New Haven M. C. three-day run to Atlantic City, N. J.

July 4-5-6, Portland, Ore.—W. F. M. convention.

July 4-6, Seattle, Wash.—Pacific Motorcycle Racing Association race meets.

July 13, Aberdeen, S. D.—Aberdeen M. C. tour to Black Hills and Denver.

July 13, Toledo, O.—Race meet under auspices of Interstate Racing Association.

July 13, New Haven, Conn.—New Haven M. C. run to New Gate Prison, Conn.

July 21, Hutchinson, Kan.—Start of Short Grass Tour to Denver.

July 23-26, Denver, Colo.—Annual F. A. M convention and National Motorcycle Meet.

July 27, New Haven, Conn.—New Haven M. C. secret time run to Danbury.

August 5-8, Atlantic City, N. J.—Annual convention of the Cycle Parts Accessories Association.

August 10, New Haven, Conn.—Endurance run under auspices of New Haven M. C.

August 10, LaPorte, Ind.—Run to Rochester run to Chicago.

September 1, Brooklyn, N. Y.—Second convention of New York State F. A. M.

How Mondex-Helix Helps Motor

THE engineering department of the Aristos Co., of 250 West Fifty-fourth street, New York, manufacturers of Mondex devices and the Mondex-Helix gasoline mixer, has prepared the following interesting article, fully explaining the modus operandi of the Mondex-Helix gas saver and its obvious need in making carbureters more efficient.

When a motor is operated at high speed, the rapid rush of fuel through the carbureter so completely breaks up and thoroughly diffuses the gasoline through the air, that the mixture is nearly perfect from the standpoint of homogeneous combustibility. This permits of an adjustment of the fuel which gives both power and economy. At slower motor speeds, however, when the mixture is drawn less rapidly from the carbureter, it becomes less efficient through diminished breaking and diffusing. In this case, there is more waste (not all of the fuel is in shape for complete combustion), and more gasoline is required for the same amount of air because of the lower ratio of fuel surface area to mass.

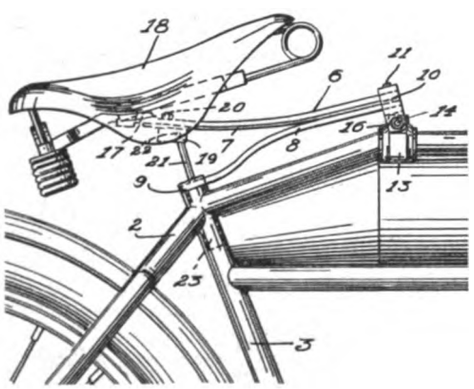
The automatic feature of the carbureter is supposed to take care of something more than the varying quantity of mixture required for different loads and speeds of the motor, which, if it were in proper condition for complete combustion at all times, would not need to be varied as to its proportions of gasoline and air. As the combustibility of the mixture varies at different gas speeds, the carbureter designer seeks to provide for varying proportions of fuel to air made necessary by the varying ratio of surface area to mass. The combustion produces much waste at all other motor speeds (further complicated by varying load demands), than the one or two for which it may be possible accurately to adjust the carbureter.

Carbureters may be made to work approximately perfect from a practical operation standpoint, while showing imperfect efficiency and economy. Forrest A. Heath began experimenting over eight years ago to find a means of keeping constant the breaking and diffusing of the fuel in the mixture from a carbureter under varying loads and speeds of the motor. After the principle was established, it required several years to embody it in a form that was simple and practical and contained no moving parts. This work resulted in the production of the Mondex-Helix, for which the Aristos Company of New York claims results which are quite as astonishing as the simplicity of the device.

The Mondex-Helix is inserted in the intake pipe of a motor, between the carbureter, and the cylinders, like a cartridge in a gun. As the mixture of the fuel and air are drawn through it, a combination of swirl and interference automatically breaks and diffuses the gasoline through the air. This permits of an entirely different adjustment of the carbureter, which no longer has to provide improper proportions of gasoline; the motor runs smoother and is vastly more flexible because of the constancy of combustion, shows more power because of more rapid combustion, and requires much less fuel because of the elimination of waste. The company is receiving most satisfactory reports from Mondex-Helix users.

NEW SADDLE SPRING

PATENT NO. 1,061,199, issued to Frank E. and Ronald A. Palin, of San Mateo, Calif., is for a spring seat for motorcycles. To the top tube of the frame is attached a collar and



shackle, the latter carrying three leaf-springs. Two of these leaves are attached to a fixture which carries the seat and a bolt which projects downward into a tube fitting into the seat-mast tube of the motorcycle frame. The third spring has its rear end resting on a saddle at the top of the tube beforementioned. To the bolt is fitted a recoil spring which bears against the saddle within the tube. The shocks from the road cause the seat and rider to oscillate about the shackle attached to the collar, the two upper springs with the lower spring damping the oscillations. The spring on the bolt serves as a buffer on the recoil movement. The method of carrying the springs prevents lateral motion.

KELLY TO HANDLE PUBLICITY.

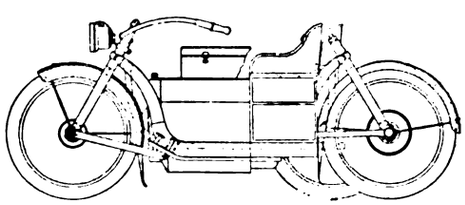
A PUBLICITY department has been established by the Wheeler-Schebler Carbureter Company, of Indianapolis, in connection with its advertising department. Joe Kelly, a well-known newspaper man of Indianapolis, will be in charge of the new department.

TOLEDO CLUB ON OUTING

MEMBERS of the Toledo (O.) Motorcycle Club held their first official run of the season to Findlay about the middle of this month. They were entertained by the Findlay Motorcycle Club upon their arrival.

A CANADIAN PRODUCT

A NEW motor vehicle using three wheels and embodying both motorcycle and automobile features is now under construction at the factory of Brantford Autocycles, Ltd., Brantford, Canada, and the accompanying illustration gives some idea of its makeup. A four-cylinder, water-cooled motor supplies the power through the medium of a multiple disc clutch and propeller shaft. The frame,



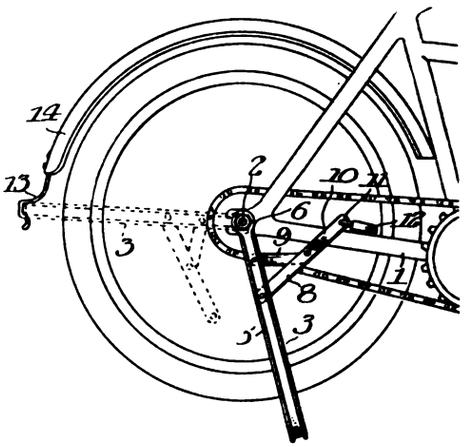
sprung fore and aft, is of channel steel. The tires are 28 x 3 inches. It is claimed for the machine that it will afford an ideal combination of comfort and power on the road and that it can be operated economically.

MOTORCYCLE SQUAD RECORD

MOTORCYCLE officers of Mobile, Ala., made 167 arrests, 111 convictions and collected $1,067 in fines during 1912. April was the heaviest month for violations, 253 persons being brought into court for speeding. This showing has convinced the authorities of the desirability of the motorcycle for police work. The squad is equipped with Indians.

FOR LOCKING THE STAND

JOHN J. TOBIN, of Chicago, is the inventor of the improved motorcycle stand shown in the accompanying illustration. It will be noted that the supporting arm of the stand on either



side forms a U at its outer end and in this rests the lower rear fork member when the machine is on the stand. The parts forming the U have aligning holes through which the yoke or bail of a padlock may be passed in order to prevent the removal of the motorcycle. In this way the lower rear fork member is locked in the forked end of the stand bracket.

BOSCH SUPPLY STATIONS

ANNOUNCEMENT is made by the Bosch Magneto Company, New York City, that the chain of Bosch supply stations has recently been extended by the addition of the following: Lemke Electric Co., Milwaukee, Wis.; Miller-Dudley Co., Washington, D. C.; Beverly Garage, Staunton, Va.; Virginia Motor Car Co., Petersburg, Va.; Dan Valley Motor Co., Danville, Va.; Fairchild Auto Co., New Orleans, La.; Ozburn Auto Supply Co., Memphis, Tenn.; Drennan Motor Car Co., Birmingham, Ala.; Chester Motor Car Co., Nashville, Tenn.; Hobbie Motor Car Co., Montgomery, Ala.; Mobile Motor Co., Mobile, Ala.; Woodside Motor Co., Charlotte, N. C.; American Ball Co., Providence, R. I., and the Bakersfield Garage & Auto Supply Co., Bakersfield, Cal.

W. D. MacMillan, Jr., Wilmington, N. C.; Kinston Garage, Kinston, N. C.; Wichita Garage, Wichita, Kan.; The Auto Supply Co., Hutchinson, Kan.; Joseph T. Cox, Penn Yan, N. Y.; Red Motor Supply Co., St. Paul, Minn.; Cuskaden Auto Supply Co., Atlantic City, N. J., and Severin-Lumbard Tire & Supply Co. Oklahoma City, Okla.

CLEVELAND FIRM INCORPORATES.

INCORPORATION papers have been filed with the Secretary of State by the Puncturemend Company, of Cleveland, Ohio. The incorporators are H. C. and M. A Wharfield, T. L. Felber, Florence Cook and Wiliam C. Wood.

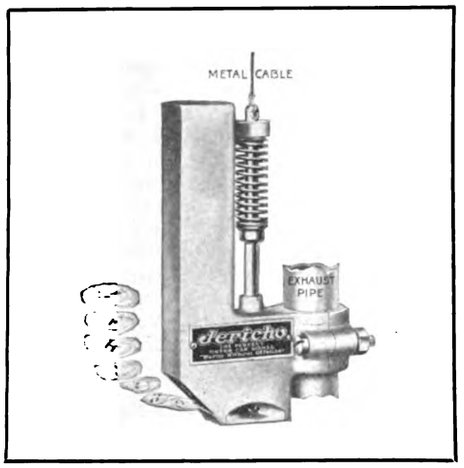
THE JERICHO FOR MOTORCYCLES

IN THE accompanying illustration is shown the Jericho motorcycle horn, manufactured by the Randall-Faichney Company, Jamaica Plain Station, Boston, Mass., a warning device that is rapidly coming into favor among motorcyclists who demand a neat, simple and effi-



cient road-clearing signal. The Jericho model for motorcycles is a comparatively new product but is already demonstrating that it embodies the same high-grade material and workmanship that distinguishes the popular automobile type. The Jericho can be fitted to any motorcycle that has two inches of straight exhaust pipe, which means that it is adaptable to all standard machines. The price, complete with all fittings, including a Jericho valve, is $4.50. The horn is easily attached and operates perfectly on either single or twin-cylinder motorcycles.

The Randall-Faichney firm is also finding a broad field for its motorcycle oil guns, which are offered in two types: the Copley, with leather-packed washer and a capacity of half an ounce, and the Broadway, with solid metal plunger and the same capacity.

R-S AGENT IN NEW QUARTERS

OWING to the rapid growth of its business, the Hub Cycle Company, of Boston, Mass., New England distributor for the Reading-Standard, and agent for a number of bicycle lines, has found it necessary to move to new quarters, at 14 Portland street.

GOODYEAR TIRE BULLETIN

FEATURING the spring number of the *Motorcycle Tire Bulletin,* published by the Goodyear Tire & Rubber Company, of Akron, Ohio, is an article written by E. M. Estabrook, chairman of the F. A. M. Membership Committee, entitled "How to Organize a Motorcycle Club."

BARROWS BACK AT OLD POST

B. S. BARROWS has returned to the Hendee Mfg. Co. as head of the repair department, over which he presided several years ago. With Barrows' return to the Wigwam, A. G. Gruendler assumes charge of the sidecar department.

JOHN P. MAHONEY, for many years purchasing agent for the Excelsior Motor Mfg. & Supply Co., and well known to the motorcycle trade, is to be married on June 18.

FRANK W. GLUGIA, of Joliet, Ill., who has ridden a motorcycle since 1910, states that he has spent only $10 on the machine in addition to the original cost.

IN POLICE SERVICE

IN A recent letter from the Harley-Davidson factory mention is made of the growing interest shown by the various police departments in motorcycles. Reference was made to the fact that Joe Holle, Harley-Davidson dealer in San Francisco, has delivered 20 machines to the police department of that city so far this year. One Harley-Davidson has been delivered to the police department at Allentown, Pa., by the Allentown Motorcycle Company. A. G. Mueller, agent for the Harley-Davidson in Milwaukee, has sold two of the 1913 models to the local police department and two to the county, to be used by the deputies. Carl Larson, who handles the Harley-Davidson in Des Moines, has disposed of five machines to the law-enforcing body of that city.

AERMORE EXPANSION

IN ORDER to handle its rapidly growing business to better advantage the Aermore Mfg. Co., of Chicago, has moved into larger quarters. This firm produces the well-known Aermore exhaust horn, the Rogers sidecar, Sabo motorcycle lock and convertible tool and is experiencing no difficulty in keeping its staff working at top speed. The new establishment of the company is at 153-155 West Michigan street, arrangements having been made to occupy one-half of the third and the entire fourth and fifth floors of a five-story building. The Aermore company has a contract covering all the mufflers for the Cadillac cars for 1914 and it is now preparing to market a new motorcycle muffler.

NEW THOR PARTS LIST

A NEW edition of the Thor parts list, covering all the machine models and the firm's brake and two-speed gear, has just been issued by the Aurora Automatic Machinery Co. and is already in wide demand. Special care has been exercised in arranging the contents and in illustrating the parts, and the operation of finding the part needed and all necessary information concerning it has been made very simple.

NEW TYPE OF SPEED TRAP.

MOTORCYCLISTS of Salt Lake City, Utah, are confronted with a new method of speed trap operation. One motorcycle cop rigged out in riding togs will pull up alongside the rider and coax a race out of him, while another cop in uniform speeds up and arrests the unsuspecting rider for violating an ordinance. Few, however, have been caught.

DE LUXE GROWTH

IN addition to the space it formerly occupied the Excelsior Cycle Co., of Chicago, has taken over the entire first floor of the building in which its establishment is located on West Sangamon street, and about 6,000 square feet of additional space will be available. In future the office, shipping department and presses will occupy the first floor and it will be possible to expand these departments in keeping with the growing demand for the company's De Luxe motorcycles.

HELPING THE MERKEL RIDER

A NEAT pocket instruction book has just been issued by the Miami Cycle & Manufacturing Company, of Middletown, Ohio, giving full particulars as to the care and operation of Flying Merkel motorcycles. It also contains helpful illustrations, and the few troubles experienced by Merkelites will be easily overcome upon reference to this booklet.

ON FLORIDA'S SANDY ROADS

J. FOUNT CALDWELL, a motorcyclist of Plant City, Fla., recently rode his Excelsior from Tampa to Valdosta, Ga. He covered the 274-mile course, which was practically all sand, in twenty hours and forty minutes.

HOY'S UNIQUE OUTFIT

ROBERT HOY, president of the District of Columbia Motorcycle Club, of Washington, D. C., appears on the motorcycle in the accom-

panying photograph, with W. M. Brooks, private secretary to Harry F. Seamark, the Merkel and Emblem agent for the National Capital, on the sulky. This picture was taken on Sixth street, Washington. The machine pulled the outfit a distance of eight miles to Potomac, Md.

A Truckload of Parcels Post Packages Leaving the Factory of the Motorcycle Equipment Co., Hammondsport, N. Y., a Daily Occurrence Now at the Home of Meco Supplies.

George Riechey, P. W. Stevens and O. W. Stevens, Perfect-Scoring Yale Team in Run of the Newark (N. J.) M. C.

FOGARTY IS NEW POPE MANAGER

FROM the Pope Manufacturing Company, of Hartford, Conn., comes the report that J. P. Fogarty has been appointed manager of the Westfield (Mass.) motorcycle and bicycle plant. Fogarty came into this position upon the resignation of E. E. Hinsman. He has been connected with the Pope company seventeen years, during which period he has held many responsible positions. Through his long experience with the Pope company he has had wide experience which qualifies him for his new position.

CORBIN RECORD BOOK

A NEAT vest-pocket booklet containing official records for practically all American sports is being passed out by the Corbin Screw Corporation, and the demand for it is already surprising the New Britain folks. It goes without saying that motorcycle records are included in the booklet, which is one of the most attractive little offerings that has come to the Editor's desk in some time. In writing for it refer to the "Corbin Record Book."

JEFFERSON IN LOUISVILLE

RIDERS of Louisville, Ky., and vicinity are now becoming acquainted with the Jefferson motorcycle through a broad-gauge publicity campaign that is being waged by the Keystone Cycle Co., of 726 West Market street, which has taken the agency for the sturdy product of the Waverly Mfg. Co. The Jefferson is a newcomer in Louisville, but it has already created an excellent impression, and the Keystone company looks forward to rapid sales.

DEALERS ARE "GAME"

W. J. SURRE, tire sales manager of the Continental Rubber Works, Erie, Pa., has just returned from a trip to Dayton, Ohio, and other points in the recently flooded district and has brought back some vivid impressions of the havoc wrought by the elements. He reports that many motorcycle dealers and jobbers throughout the flooded area suffered considerable losses, but that in nearly every instance repair work is being rushed and the motorcycle men are making Herculean efforts to meet the demands made upon them.

VISITS INDIAN FACTORY

AMONG the prominent visitors at the Indian factory during the week ending May 24, was J. L. Foubister, of Auckland, New Zealand. Foubister has ridden an Indian with success in New Zealand. After looking over the factory at Springfield he sailed for London. He plans to enter the Senior Tourist Trophy and the French Grand Prix races, using an Indian machine.

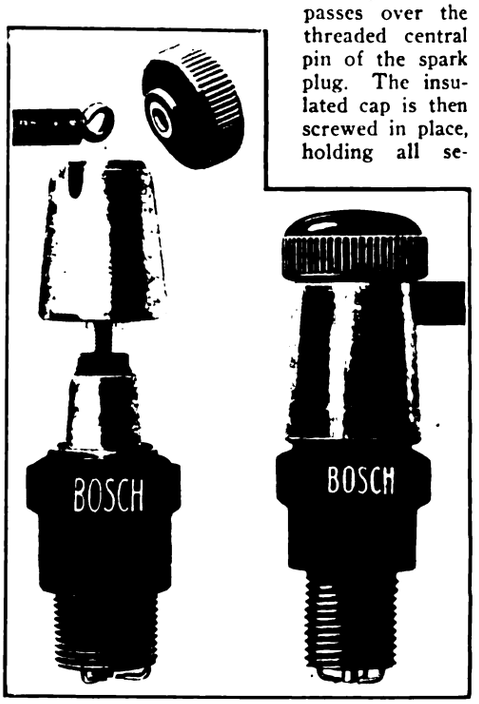
F. A. M. membership certificate number 22,000 was issued to Ira Jacobs, of Tulsa, Okla.

HOODS FOR BOSCH PLUGS

THE advanced idea of entirely enclosing the ignition system so as to prevent straying of the electrical energy is made possible without alteration of the motor design, or the use of special spark plugs, through the adoption of Bosch spark plug hoods. Water or other liquid current conductors cannot possibly reach the live electrical connections when the hoods are in position; so that the ignition system is thoroughly insulated. Although placed upon the market a little over a year ago, the Bosch spark plug hoods have not been especially featured, due to the difficulty of obtaining a sufficient supply of Steatite, the artificial stone of which both the hoods and the insulators of Bosch spark plugs are constructed.

The hood illustrated is noteworthy on account of its simplicity of construction and the method of attachment. There are but three parts—the Steatite hood, the asbestos washer and the insulated terminal thumb cap.

To place the hood in position, the knurled terminal nut regularly supplied with the Bosch plug is removed, the asbestos ring is pressed into the groove at the base of the hood. The Steatite hood is then placed in position, the cable is set in its recess and its loop terminal passes over the threaded central pin of the spark plug. The insulated cap is then screwed in place, holding all secure. An absolutely insulated and waterproof spark plug is the result.



The ignition cable can be detached quickly and without tools, and the removal of any part of the protecting hood proper is unnecessary. When it is desired to detach the cable, only thumb screw is removed in the same manner as regularly operated on spark plugs. The spark plug terminal is completely insulated so that the cable may be removed or a connection made more secure while the engine is in operation. There need be no fear of electrical shock. Bosch spark plug hoods are made for all sizes of Bosch spark plugs, including the special motorcycle size.

BULLETINS from Earl Armstrong, who is now on the Pacific Coast, are to the effect that he expects to do a little dirt track riding around Portland before heading eastward. He also intends to stop over at Salt Lake City for a few meets on the Wandemere Bowl.

Sturdy Pirate Model Ready in July

WORK is now being rushed by the Milwaukee Motorcycle Co., 834-836 Muskego avenue, Milwaukee, on the first models of the Pirate, a new machine which is to be placed on the market in about two months. The company will make its first bid for recognition with a single-cylinder model, and about two months after the appearance of this type a twin machine will also be offered. In the accompanying photograph is shown one of the first photographs of the new single.

This machine is fitted with a 5 h. motor, having a stroke of 4 inches, large mechanical valves, silent timing gears and oiling by side feed drip and splash system and an auxiliary oil pump. Owing to the simple construction of the crankcase it is easily cleaned and the rider should experience no difficulty in keeping his power-plant attractive on the exterior as well as efficient in operation. The Pirate will carry a Heitger carbureter, Splitdorf or Berling magneto, Troxel Saddle, Eclipse countershaft clutch and 28 x 2¼-inch tires. As will be noted in the illustration the frame is of the loop type, and the company is making exhaustive tests to insure rigidity and durability. The front fork is of the Sager type, and a shock-absorbing seat will be provided.

Digitized by Google

Correct motorcycle lubrication is a serious problem. But its fundamentals are simple. We will cover them in a plain question-and-answer form.

Question: What moves your motorcycle?

Answer: Power.

Question: What determines your power?

Answer: Your motor, your fuel and your lubricant. If any one of these factors falls short in full efficiency, you receive less than full power. The greater part of the power lost is taken up by friction—wear on the moving parts.

Question: What will give you the most efficient lubrication?

Answer: An oil of the highest lubricating *quality* whose *"body,"* or thickness, is best suited to the feed requirements of your motor.

Question: Suppose you use oil of lower lubricating *quality* or of less correct *"body."* What are the penalties?

Answer: Many. Among them are:

(1) Escape of the explosion past the piston rings and loss of compression. (2) Unlubricated cylinder walls at the upper end of the piston stroke. (3) Imperfect lubrication of many of the bearings. (4) Excess carbon deposit. (Due to the oil working too freely past the piston rings and burning in the combustion chamber.) (5) Excessive oil and fuel consumption. (6) Worn wrist pins. (7) Rapid and unnecessary deterioration of your motor. (8) Loose bearings. (9) Noisy operation.

Question: How can you determine the correct oil for your motorcycle?

Answer: By consulting the lubricating chart—printed on the right.

Question: What assures the reliability of this chart?

Answer: The chart is the result of the most far-reaching and most thorough study of motorcycle lubrication that has ever been undertaken.

It was prepared by a Company whose authority on scientific lubrication is recognized throughout the world—the Vacuum Oil Company.

It was prepared after a careful analysis of the motor of each make and each model of motorcycle.

The superior efficiency of the oils specified has been thoroughly proven by practical tests.

If you use oil of lower lubricating ***quality*** *or of less-correct* ***"body"*** *than that specified for your machine, your motor faces unnecessary friction, loss of power, and ultimate serious damage.*

In buying Gargoyle Mobiloils from dealers it is safest to purchase a full barrel, half-barrel, or a *sealed* five-gallon or one-gallon can.

Look for the name and the red Gargoyle on the container.

A booklet, containing our complete automobile and motorcycle lubricating charts, together with points on lubrication, will be mailed on request.

GARGOYLE

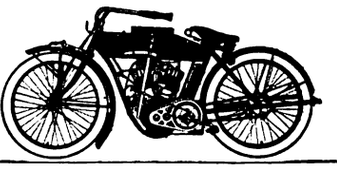
Mobiloil

A grade for each type of motor

The various grades, refined and filtered to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "Arctic"

They are put up in 1 and 5 gallon sealed cans, in half-barrels and barrels. All are branded with the Gargoyle, which is our mark of manufacture. They can be secured from all reliable garages, automobile supply stores, and others who supply lubricants.



Correct Lubrication

SMOOTHEST OPERATION	MOST POWER	FEWEST REPAIRS	LONGEST LIFE

Explanation. In the schedule, the letter opposite the motorcycle indicates the grade of Gargoyle Mobiloil that should be used. For example: "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." The recommendations cover all types of the same make unless otherwise noted.

America's Foremost Motorcycles Use the Bosch Magneto

Black Hawk	Excelsior	Jefferson	Pope
Dayton	Harley-Davidson	M. M.	Reading-Standard
De Luxe	Henderson	Merkel	Thor
De Luxe Engines	Indian	Minneapolis	Triumph
Eagle	Iver Johnson	Michaelson	Yale

EVER since motorcycles have risen from the experimental stage, the better ones have been Bosch-Equipt—in fact, the motorcycle never was more than an experiment until it was Bosch-Equipt.

The list of manufacturers given above comprises all the prominent makers of motorcycles; no other ignition system in the world can show a list of even $\frac{1}{8}$ as representative.

These are makers who produce motorcycles that satisfy, who insure confidence at the most vital point—insurance against trouble is their objective, not price.

These have selected Bosch and used Bosch, some of them for over seven years, because they knew Bosch was unquestionably superior in accuracy, reliability and efficiency. They have tested Bosch by the thousands each year; they are positive Bosch is as dependable as their own product.

Be guided by the judgment of America's foremost motorcycle manufacturers. Select a Bosch-Equipt motorcycle and enjoy that priceless confidence and satisfaction that make motorcycling worth while.

Cheaper and Faster Than Railway

Mr. L. Lippow, Vice-President and General Manager of the Milwaukee Sycle Supply & Sales Co., was in Middletown, Ohio, the other day—the home of

THE FLYING MERKEL

When it came time to return to Milwaukee, Mr. Lippow found that on account of a railroad wreck he would be compelled to lose another day, and business required his attention in Milwaukee. Mr. Lippow rides a motorcycle as well as sells them—and he is independent of railroads, so he mounted a brand new 7 H. P. Flying Merkel motorcycle—one that had never been worn in—and headed for Milwaukee.

HE REACHED MILWAUKEE THE NEXT DAY WITHOUT A SINGLE MECHANICAL MISHAP BUT, BETTER THAN THAT—HE BEAT THE TRAIN HOME. THE TOTAL COST WAS $1.42 FOR OIL AND GASOLINE. BY RAILROAD IT WOULD HAVE COST HIM A LITTLE MORE THAN $10.00.

"Made its name on Merkel mileage"

The Miami Cycle & Mfg. Co.

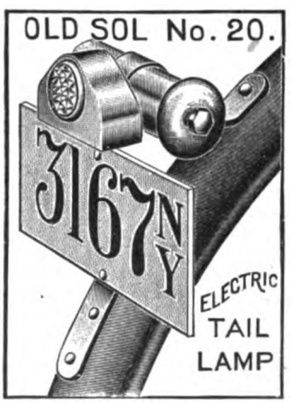
MIDDLETOWN, OHIO
MEMBER M.M.A.

"Away with Gas Tail Lamps—Give me an Old Sol No. 20 Electric Tail Light"



Boys, it's a beaut! It does away at one stroke with the countless vexations of the gas tail lamp, with its long tube that has to be strung from the tank to the rear of the motorcycle and its steady drain on the gas that rightfully belongs to the headlight.

It's a compact little lamp, quickly detachable and can be used as a trouble lamp for fixing broken connections, adjusting the carbureter, etc., at night. Every feature of this lamp is fully covered by patents, both as to method of operation and design.

Stanley T. Kellogg, a leading distributor in Bridgeport, Conn., was so impressed with the efficiency of Old Sol No. 20 that he placed his order for 500. "Nuf sed."

DESCRIPTION

Weight, 22 ounces. Combination bracket holds number plate and allows white light from lamp to illuminate same. Red jewel on head throws rear signal. Burns from 20 to 25 hours intermittently. Supplied complete, with 1 candlepower bulb and battery No. 790.

PRICE, $3.00

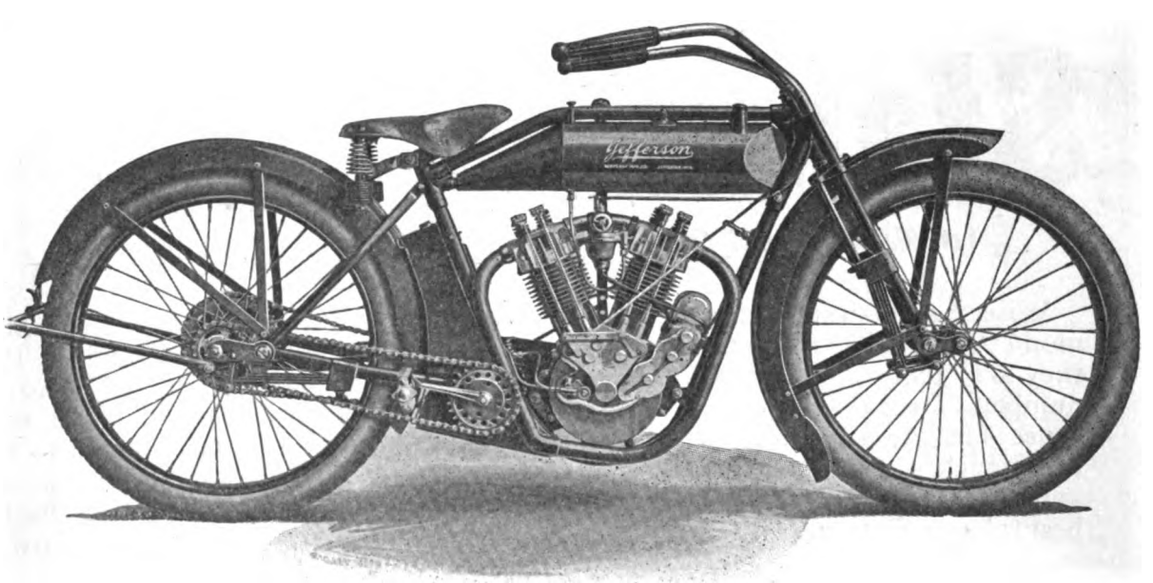
WIZARD MOTOR CO., INDIANAPOLIS

H. T. ROBERTS, Representative, Railway Exchange Bldg., Chicago

Handsome Is As Handsome Does



It's a beauty and no mistake, but don't judge by the looks alone. Note the automobile leaf springs, front and rear—the clean-cut powerful motor, with overhead valves, its perfect balancing. Note the absolute absence of superfluous parts, the simplicity of the grips, without clutch levers of any sort. Do you know what that stock motor can do, **without** special preparation or "tuning up" of any kind? Oh, only about 78 miles an hour! And without turning a hair. Yes, it's there with speed, but it's got service, too, in its make-up.

Our catalog tells the rest. Post a postal for it NOW.

"The Coventry" Chain

"The Motor's True Mate"

Transmission efficiency is not a matter of guesswork—of time, place or circumstance.

A chain that is made of the highest quality materials, with exquisite care, a chain that is carefully inspected and rigorously tested—such a chain MUST give perfect service at any time, under any conditions.

A brief study of the manufacturing conditions surrounding the making of "THE COVENTRY" CHAIN will explain WHY it gives such universally satisfactory service.

Our catalog tells how a good chain is made, and is free.

51 Chambers St., N. Y.

Standard

In Name and Quality

Never has there been a truer saying than the time-worn old adage, "It's the little things that count." And it is the degree of attention paid to these "little things," that determines oftimes the success or failure of a machine to "get across."

Wise manufacturers are equipping with Diamond "E" Spokes and Standard Pedals because they are quality goods—because they reduce the number of repair shop trips for the rider—because farsighted manufacturers realize that a motorcycle's weakest points are its strongest—and it is that infinite attention to detail which bespeaks perfection.

The dealer who looks ahead will stock heavily with Standard Pedals and Diamond "E" Spokes and Nipples. The motorcycles that are not so equipped will inevitably come to his shop for replacements and it is up to him to sustain his reputation for high-grade repair work by fitting Standard parts.

Everyone knows the superiority of Standard No. 3 Pedals, their deep, soft rubber cushions, the interchangeability of the rubbers, and the thousand and one other good features that are not found in other pedals. The feet cannot slip no matter how rough the going. And the perfection of Diamond "E" Spokes is proverbial.

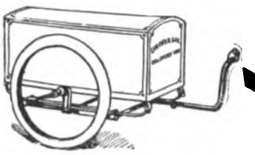
Universal Sidecars

"They're as good as they look"



Grace—Beauty—Strength—Lightness

Comfort and Low Cost

Universals are everything a sidecar should be. That's a concise yet eloquent description. Their clean-cut graceful appearance, their luxurious comfort and enduring strength give them undisputed leadership in the sidecar field.

The famous Autocar model, an exact replica of the most luxurious automobile tonneau, our light, racy reed body models, and last, but not least, the Universal Delivery van complete a line which from both sales and service standpoints are certainly worthy of careful investigation.

Mott Steel Rims Insure Longer Service

ROAD conditions in America are different than in any other country. They are good, bad and indifferent. Generally bad. On rocky, rutty roads the rims are necessarily subjected to considerable punishment.

The wise manufacturer gives careful consideration to this important feature of motorcycle construction. He knows that to cut costs by using rims other than

Mott Steel Rims

is to invite dissatisfaction and possible cancellations.

Use **Mott Steel Rims.** They are strong—elastic. They are made in an enormous plant devoted exclusively to the manufacture of steel rims.

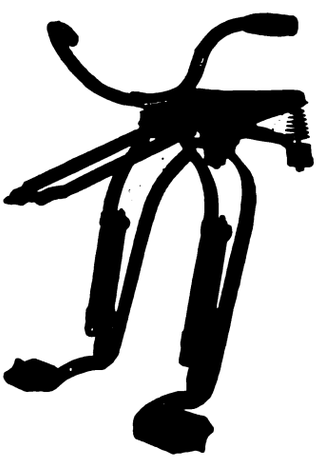
Simplicity—Comfort—Stability

The Empire Special

SPRING TANDEM



"IT FLOATS"

You wouldn't seriously consider purchasing a motorcycle that does not possess at least these three cardinal points. Then why permit a tandem attachment to be fitted on your machine, that has not proven to your complete satisfaction that it possesses these three characteristics in full measure? Here is

The Empire Special Spring Tandem

"IT FLOATS"

There is nothing about the Empire Special to get out of order. Simplicity is the keynote of its construction.

By a peculiar and ingenious invention, for which patents have been allowed, the Handle Bars and Pedals are caused to float with the saddle, insuring the maximum of comfort and smooth riding on the roughest of roads.

The famous Kelly No. 10 Adjustable Handle Bars are fitted on all Empire Specials.

Constructed of steel and no malleable parts, the Empire Special is practically indestructible.

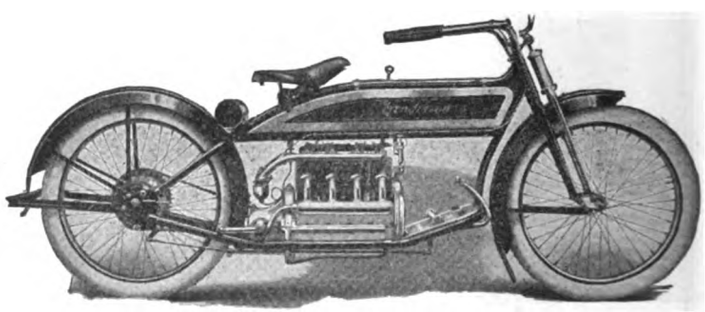
Ask your dealer for our booklet. If he hasn't it, send us his name and you'll get one by return mail. The Empire's proof of superiority is in it.

EMPIRE SPECIALTY COMPANY

Office, 147 The Arcade **CLEVELAND, OHIO**

CHAS. E. WEAVER, Sales Manager

Henderson



8 H. P., 4 cylinders, free engine, chain drive, $325.

Why Four Cylinders?

Because the motorcyclist wants three things—power, flexibility of power and easy riding.

The Henderson's four cylinders develop 8 horsepower—enough and to spare to go over any road or climb any hill you will encounter, and far more speed than you will dare use.

This power is flexible. You can throttle to walking speed and still it pulls. You can jump to high speed without nursing the motor.

Four cylinders produce less vibration than one. They are placed low, so the center of gravity is low. The machine rides easier and holds the road better; and the wheelbase is longer.

These things have given the Henderson national popularity. Write for the literature.

Henderson Motorcycle Company

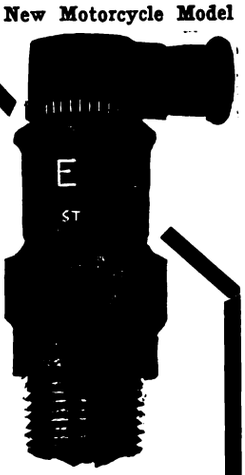
HERZ PLUG
New Motorcycle Model



Racing men and other motorcyclists who know that it pays to be particular about their Spark Plugs have long insisted upon using

HERZ PLUGS

"Bougie Mercedes"

These Plugs are now in their twentieth year—twenty years showing a continuous record of efficiency and steady improvement.

The new model has a completely protected terminal which renders it dustproof and waterproof and obviates the possibility of short-circuiting.

Other important Herz features are the Four Sparking Points, the Platinum-Alloy Electrode, the Self-Cleaning Construction, and above all the Unbreakable Blue Enameled Double Stone Insulation.

Since 1894 the standard of Europe and America

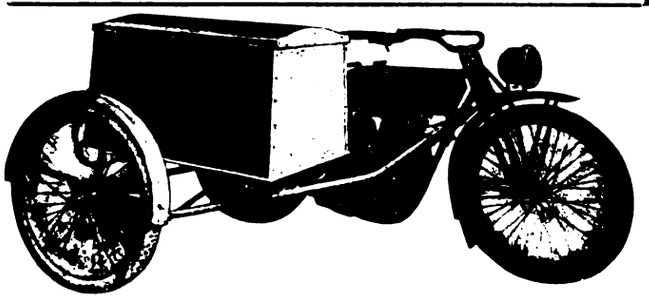
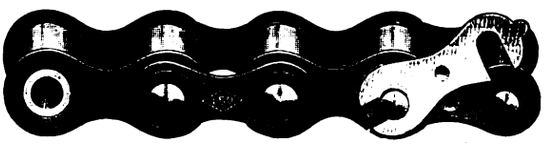
"ANDERS"

From both a business and pleasure standpoint, the Anders line of sidecars has tremendous opportunities. Their substantial yet graceful construction, the unique "rocker motion" which immediately puts them at the head of the line in the comfort class, and, finally, the reasonable price at which they are sold, makes them a proposition which no clear-thinking dealer can afford to overlook. Get our booklet today.

National Cycle Accessories Co., Aurora, Ill.



No. 150 DIAMOND CHAIN



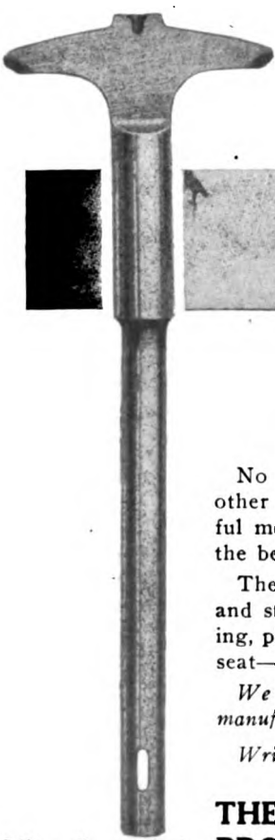
DESIGNED ESPECIALLY FOR MOTORCYCLES

This chain is the particular choice of motorcycle riders who use their machines day after day, in all kinds of weather—because it is known to be dependable under all conditions.

Diamond Chains are for sale by all leading supply houses. When you order be sure to look for the trade mark on every link.

TRADE ◇ MARK

DIAMOND CHAIN & MANUFACTURING CO.
227 W. GEORGIA ST. INDIANAPOLIS, IND.
CAPACITY 8,000,000 FEET PER YEAR



Split section of head showing cast iron rim.

A MOTORCYCLE depends on its VALVES for power

No matter how much you spend on other parts you cannot produce a powerful motorcycle unless you equip it with the best valves.

The special formula steel in the head and stem of this valve overcomes warping, pitting and breakage. The cast iron seat—welded on—minimizes pitting.

We make this valve in quantities for manufacturers only.

Write for our prices.

The Hagstrom Spark Plug

"It Shows What Your Motor Can Do"

No other spark plug brings out the true efficiency of your motor as does the Hagstrom. Its clean, crisp, sizzling spark finds every atom of charge in your motor's cylinders. It gives more power on less gasoline.

The porcelain and mica feature is an exclusive Hagstrom idea.

The electrodes are genuine imported "Meteor" metal—so expensive that few plug makers are using it.

The "Hagstrom" is the regular equipment on 1913 "Yales"—"Marvels"—"Indians" and "Velies."

Your dealer has them or will get them for you.

The Hagstrom Bros. Mfg. Co.
Box 144, Lindsborg, Kan.

Brown Scientific Non-Deflating Pneumatic Tube

AN AIR-FILLED MOTORCYCLE TUBE POSSESSING VERY UNUSUAL FEATURES:

First: It withstands a tread puncture without deflating the tube.
Second: The higher the pressure the tighter the puncture closes.
Third: It eliminates the risk of destroying casings by reason of punctures.
Fourth: The danger of loss of control of machine is removed.
Fifth: It assures you of not being obliged to repair a puncture on the road and gets you "there and back" on full tires.

AIR FILLED ONLY.

Punctures are self-closing by reason of a scientific but simple principle of construction.

BREEZE CARBURETER CO., Newark, N. J.

There Are Times When Ignorance Is Not Bliss

Let us enumerate:

For instance, on a sweltering day while you're happily breezing along, your motor suddenly develops the "fidgets." You get off and investigate. If you know all about a motor's internal construction and are "wised up" on how to handle a cranky magneto, and know all there is to know about the carbureter—you will EVENTUALLY locate the trouble. But if you don't—you're STUCK!

Then is the time to dig into your tool box and consult your tried and true friend, the

MOTORCYCLE MANUAL

Its trouble chart tells how to locate the trouble and REMEDY IT. It tells all there is to tell about every part of your motorcycle. It gives concise information regarding license laws in every State in the Union. It gives the official racing records. It explains horsepower and other mechanical formulae; it is a handy motorcycle trade directory; it enlightens you as to the F. A. M.—who's who and what he is doing—it—oh, well!—do you think you can afford to be without it?

And it costs a quarter. What are you going to do about it?

At Last—A Real Motorcycle Spark Plug!

MADE OF HEAT DEFYING, PERFECTLY INSULATING PORCELAIN—AND DESIGNED FOR MOTORCYCLES ONLY

No need any longer to use the inferior mica plug or a makeshift porcelain. This new Motorcycle Standard Spark Plug, built by the greatest manufacturer of spark plugs in the world, gives motorcycle riders a plug with a porcelain insulator that is faultless, defies heat and insures perfect ignition.

MOTORCYCLE STANDARD SPARK PLUG—$1.00

Leading motorcycle engineers of the country have pronounced this plug right in principle and construction. The length over all is 2¼"—just the right size for the limited dimensions available for a spark plug in the motorcycle motor. The porcelain is made in our own potteries. Heat cannot crack it. The bushings are case hardened. The terminal nut will take ordinary wire, ring, or special "Indian" terminal.

Comes in half-inch or metric sizes. Your dealer will supply you—or sent prepaid on receipt of price and size. Our guarantee—"Your money back or a new plug, unless you are absolutely satisfied."

Government Test Proves Magnetic Speedometer Inaccurate

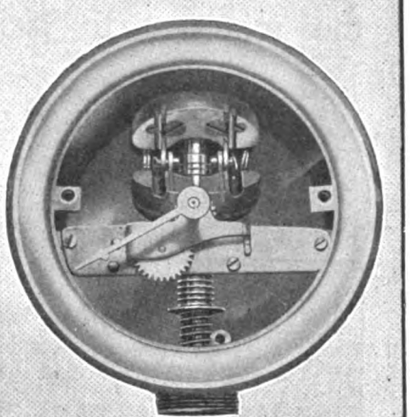
CORBIN-BROWN SPEEDOMETER

"The Speedometer of Absolute Accuracy"

What more convincing evidence than this?

The Bureau of Standards of the United States Government has made exhaustive tests of the magnetic type of speedometer, and has proved that such instruments show a variance during hot and cold weather of more than 20%.

For absolute accuracy under all conditions, there is only one correct principle for speedometer construction—the principle of the CORBIN-BROWN - CENTRIFUGAL. Price, $15.00.



For sale by dealers everywhere.

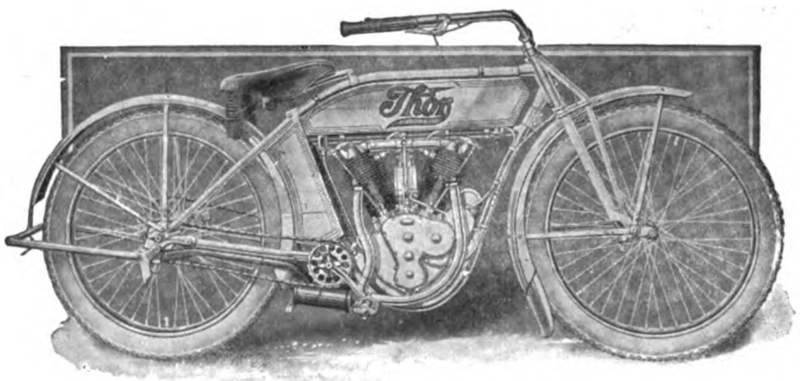
Worth the Price!



Model 13-U 7 H. P. Twin, One of the Three

FULL value—in service—in comfort—in appearance is what you get when you buy a ***Thor***. Especially do you get the best value in service—service that is wanted day after day. The ***Thor*** has the only direct transmission to which is attached the positive ***Thor*** clutch—affording power to climb 50% hills—unlimited speed—in fact, enabling the machine to travel any roadway. When acquainted with the

Thor

Patented Undergeared Internal Direct Transmission

you will realize what good service means. Jerks and jars are eliminated—giving you about twice the pleasure and comfort from your riding and practically eliminating mechanical trouble. Just give us an opportunity to show you—then compare the ***Thor*** with others. You cannot possibly get as much value for your money invested in any other machine—and we will prove it to you any time you wish.

Another Wonderful Record

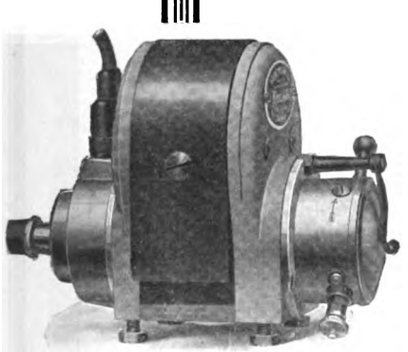
has been made with

HERZ MAGNETO

On May 15th and 16th, M. E. Gale and passenger, on an Emblem Twin, rode from Angola, N. Y., to Boston, Mass., a distance of

600 Miles, in 19 Consecutive Hours

About 350 miles of the run was made through terrific rain storms and over roads absolutely indescribable in their wretchedness. Even under such adverse conditions, no trouble whatever was experienced on the road.



HERZ MAGNETO can be depended upon day in and day out, in all kinds of weather and upon all sorts of roads. Our claim that it is not only dustproof but absolutely waterproof was proved conclusively at this winter's New York and Chicago Shows, when a HERZ MAGNETO ran for 16 days completely submerged in water. Without exception, this is the strongest Magneto of its size and weight in the world.

John P. Garner, president Henderson Motorcycle Sales Co., in Rogers Side Car with J. E. Bice, vice-president of same concern on Henderson Motorcycle.

Wins Motorcyclists' Highest Endorsement

The Rogers Motorcycle Side Car has won the endorsement of leading motorcycle manufacturers, dealers and users, throughout the country.

The letter printed on this page is typical of the enthusiastic comment received daily on this wonderful Side Car.

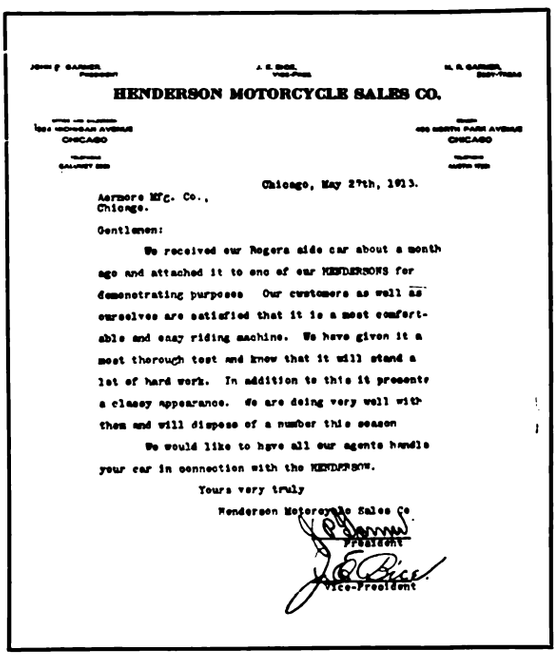
Alert, up-to-date motorcyclists are equipping their machines with side cars this season. Scores are selecting the Rogers because of the endorsement given it and the fact that it offers so many values for a moderate price.

ROGERS MOTORCYCLE SIDE CAR

The Rogers has a beautiful and spacious automobile body. Its superior and distinctive construction gives comfort, ease of riding and safety. It will make Her supremely happy to ride in a Rogers, **by your side with unobstructed vision ahead.**

Write today for instructive Rogers booklet. We will send it together with the name of our dealer in your locality. If we are not represented there, we will fill your order direct.

Every dealer should order a Rogers for demonstrating purposes. One Rogers sells ten. It will greatly increase your business.



HENDERSON MOTORCYCLE SALES CO.

CHICAGO — CHICAGO

Chicago, May 27th, 1913.

Aermore Mfg. Co.,
Chicago.

Gentlemen:

We received our Rogers side car about a month ago and attached it to one of our HENDERSONS for demonstrating purposes. Our customers as well as ourselves are satisfied that it is a most comfortable and easy riding machine. We have given it a most thorough test and know that it will stand a lot of hard work. In addition to this it presents a classy appearance. We are doing very well with them and will dispose of a number this season.

We would like to have all our agents handle your car in connection with the HENDERSON.

Yours very truly

Blaze Your Way To Greater Motorcycle Sales With "Black Hawk"

Live-wire dealers everywhere are grasping the local sales-rights of this new motorcycle, designed by the oldest, wisest heads in the motorcycle world.

The "Black Hawk" is the motorcycle all masters of motorcycle craft impatiently awaited for over a year and a half. It is the masterpiece of the acknowledged geniuses of the motorcycle world—a wonderful achievement.

The "Black Hawk" Is the Motorcycle Sensation of 1913

The success of each "Black Hawk" agent is **sure**—because the supremacy of the "Black Hawk" is **certain.** No other motorcycle shown in 1913 combines within itself so many **new** features that appeal so forcibly to riders—so many innovations that are such **real improvements.**

Check these improvements over—as they are noted in the panel to the right. Then act quick—don't let "the other fellow" beat you to this sure, easy sales-maker. Time is slipping—don't let it slip this opportunity through your fingers. Write today.

BLACK HAWK MOTOR CO.

Dept. B Rock Island, Ill.

"Black Hawk" Betterments That Bring Bigger Sales to "Black Hawk" Dealers

Spring Forks and Seat Posts designed so uniquely that they cannot "bottom"—that they cannot break.

Free Engine Clutch—instead of an unsightly bump on engine shaft or side of machine, clutch is **on the inside of rear hub**—thoroughly protected—most durable, being of the multiple steel disc type. This clutch is **lubricated while slipping,** thus avoiding wear and tear on engine and whole machine.

Most Flexible Motor—as fast and almost as silent as thought, yet extremely flexible, handling machine flawlessly at all speeds from 50 to 60 miles to 4 miles per hour without use of clutch.

Steel Oil and Fuel Tank Built Integral With Frame—enabling saddle to be placed low without sacrificing strength or beauty of frame—and also making the "Black Hawk" balance **almost** as perfect as that of a fine watch.

Sight Feed Mechanical Oiler—our exclusive position automatic oil pump, with only one moving part, cannot clog, always furnishing perfect lubrication, with oil flow increasing automatically as speed of machine increases, the flow stopping when engine stops.

This picture shows twelve Newark, N. J., Police and their Excelsiors. They are prepared for any emergency

How Competitor A Great Excelsio

The Newark, N. J., Police Dept. was satisfied to place its order for 12 Twin Excelsiors after the "Ex" had beaten all competitors in the two mile speed contest which was to decide the order. But one of the beaten contestants alleged that the winning "Ex" had been doped to make it speedier.

The Haverford Cycle Company—the local "Ex" agency—was more than willing to have the race re-run.
Again the "Ex" won. Once more did competitors for the order get peevish. This time it was claimed that the rider who won was a "professional" rider.

SEE THE "EX" DEALER OR W

"The Excelsior Always Makes Good"

Made

Victory Still Greater

Again our local agent consented to another race—even after the order *was his.* Here was a chance to make a great victory still greater. So a third race was arranged and in order to prove beyond any doubt that the "Ex" could do it again, a policeman was mounted on a fresh "Ex" straight from the crate, and easily *won.* The Excelsior that you buy is as good in every particular as the machines sold the Newark Police. The above is another big reason "Ex" dealers make big sales.

Write today for our "open territory" proposition—maybe you can secure the agency for the "Ex"—the world's greatest auto-cycle.

PHONE DOUGLAS 3686

628 THIRD STREET
SAN FRANCISCO, CAL. April 28th, 1913.

The Davis Sewing Machine Co.,
Dayton, Ohio.

Gentlemen:

It will probably be of interest to you to know of the splendid showing made by a Dayton Motorcycle on a trip to Sacramento and return the distance being 280 miles.

The photograph was taken at the Sacramento Motorcycle Race meet Apr. 26 & 27 and shows W.E.Woods and wife and Jos. Mather and wife. This machine was equipped with a side car carrying the two ladies and with Mr. Woods the owner driving and Mr. Mather on a tandem - four passengers in all. The total weight of passengers & luggage was 635 lbs., in addition to which was the side car attachment. Notwithstanding this load the average time made was 30 miles per hour, which is all the more remarkable as there were two heavy grades to negotiate over the Altamont & Dublin Hills. The machine took these grades with ease carrying all four riders, passing some twins that could not even make the grades with but two passengers. The owner of the DAYTON, Mr. Woods who is seated on the saddle in the photo, has owndd and ridden most every type of Motorcycle, but is now a DAYTON booster as this trip demonstrated the strength & power of the DAYTON and accomplished what had never been done before - a Motorcycle carrying four passengers to Sacramento and back.

The writer inspected the machine to-day and it is in perfect condition, notwithstanding the strain to which it was subjected, and the frame is in perfect alignment.

Yours very truly,

W. E. & W. H. Jackson,

W. E. Jackson

Year After Year, the

AGAIN the "Big Y" made a clean sweep in the annual Memorial Day endurance run of the New Jersey Motorcycle Club. The two days' grind over 465 miles of steep hills and miserable roads, made a test so severe that **the Yale was the only machine which had all its starters to finish the run.**

Also, for the **fourth consecutive year,** the manufacturers' team trophy was won by the Yale team, George Riechey and P. W. and O. W. Stevens. It was a "hands-down" victory, with no other team able to approach its score, for the Yale was the **only team of which all three riders finished.**

Digitized by Google

Yale Wins on the Road

Yale Riders in New Jersey Two-Day Run, Left to Right: C. A. Leander (individual rider), and the Yale team, O. W. Stevens, George Riechey, and P. W. Stevens.

In such searching competition against the best riders and machines of all the others, the Yale made good just as we knew it must. When a machine is built as the "Big Y" is built, with the most expensive and carefully-selected raw materials for every part, built by the expert skill of highly-paid, experienced mechanics, it cannot help but succeed. Its service excels that of others just as its construction does.

CONSOLIDATED MFG. CO.

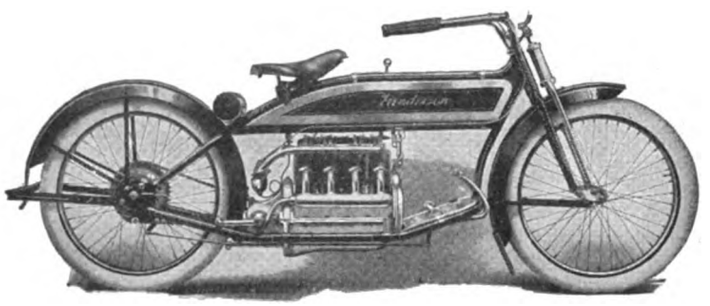
HENDERSON



8 H. P., 4 CYLINDERS, FREE ENGINE, CHAIN DRIVE **$325**

Why Henderson popularity is sweeping the country

It is not difficult to explain the widespread grip the Henderson has taken on the nation's motorcycle business.

It is directly due to the Henderson's advantages of no noise, no vibration, little or no road shock, the easy riding produced by the combination of a low saddle, long wheelbase and 3-inch tires; no waste of power, and a motor flexibility possible only with four cylinders.

These, in turn, are the results of structural features lacking in the ordinary motorcycle:—

The 8 H. P., 4-cylinder motor, low center of gravity, chain drive, continuous development and application of power.

These features appeal powerfully to the buyer; he really wants them.

These features have sent a wave of Henderson popularity sweeping the country that will reach you sooner or later.

The Henderson letter will help you understand better the Henderson advantages. Write for it.

Henderson Motorcycle Co., 1170 Cass Avenue, Detroit, Mich.

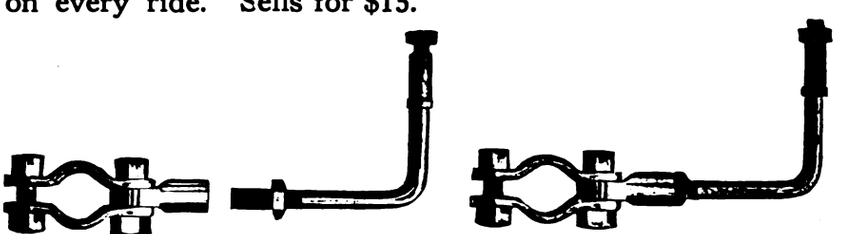
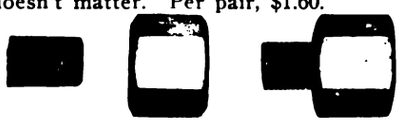
Fully Equipped

For genuine comfort and real service, Fentress-Newton specialties are necessary equipment. The F-N combination tandem attachment gives luxury to the passenger—ask anyone who has ridden it. Its low riding position makes steering easy. The carefully-designed shape of the seat, narrow in front, and the compound springs insure enjoyment on every ride. Sells for $15.



LAMP BRACKET FOR ANY MACHINE.
The only lamp bracket that will fit any machine. Adjustable in all directions. Shape of handlebars doesn't matter. Per pair, $1.60.

F-N BACKREST
This backrest gives automobile luxury to the motorcyclist and relieves strain on the back on long tours. Attached or removed in a moment's time. Price, $2.60.



F-N EXTENSION NUTS
The F-N Extension Nut, for attaching tandems or luggage carrier, has a screw insert that acts as lock for the nut. Made in these sizes: ½ x 24, ½ x 20, and 9/16 x 24. 40 cents per pair.

If you are not using Fentress-Newton equipment you are not getting the full benefit of your machine. Find out about this—write for our catalog.

New Departure,—

The last one out and worth waiting for.

Riders are already asking Dealers about it.

It "looks good" to them.

It is exactly the same kind, type and design of a brake as is used in automobiles.

It is powerful enough to hold an automobile, or a motorcycle of several times the horse power of any now on the market.

It gives you everything the autoist has:—

Absolutely reliable control of your motorcycle under all conditions:—

A brake that will not wind, bind or lock:—

A slight back pedaling pressure will exert a retarding force of a ton and a half.

You surely want to know about this newest motorcycle device.

Write for fully illustrated and descriptive literature.

Prest-O-Lite
For Motorcycles

"Wouldn't ride at night without it"

That's what every experienced rider says about Prest-O-Lite. You know, if you've ever tried to do any road work at night that the oil lamp won't do. Small carbide lamps are but little better.

But with Prest-O-Lite and a lamp big enough you can tour safely any time and anywhere. You have a brilliant, dependable light that turns on and off like a gas jet.

Money Invested

Regard the money paid for Prest-O-Lite not as money spent,—but as money invested. It's extra insurance against accident. And, besides, Prest-O-Lite never gets to be second-hand. It can always be sold for about what it cost, owing to the universal use and demand. Exchanges cost little—never more than the carbide to feed a generator—and in most cases less.

$10

Try Prest-O-Lite for 30 days at our risk

You need Prest-O-Lite to make your night riding pleasant and safe. So that you can see how much you gain by it, we want to have it on your machine for 30 days' trial. Then if you decide you can do without Prest-O-Lite, the trial won't cost you a penny. Fair enough, isn't it? We want every rider who isn't using Prest-O-Lite to take advantage of this offer. Write for booklet and plan today.

The Prest-O-Lite Co. 246 Speedway Indianapolis, Ind.

CANADIAN GENERAL OFFICE AND FACTORY, MERRITTON, ONT.

Exchange Agencies Everywhere

TO DEALERS—It's a poor idea to train your customers to going elsewhere for Prest-O-Lite Exchanges. The other dealer may sell them other things as well.

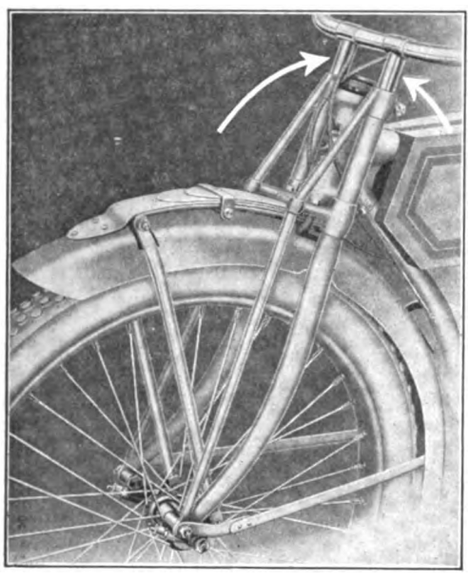
POPE

Double Stem Handle Bars

Give POPE Riders Perfect Steering Control



Pope riders have absolute steering control under all conditions because Pope Motor Cycles have DOUBLE STEM HANDLE BARS instead of single stem. As it is impossible for TWO STEMS to slip, steering wheel and handle bars are bound to work in unison so that absolute control of the handle bars means absolute control of the steering.

By fitting double handle bar stems into the extension fork sides, the steering members are held together as rigidly as if they were one piece, which they virtually are.

The fork sides themselves are made in one piece of heavy re-inforced tubing, connected by drop forgings at the top and bottom of the fork crown, giving the strongest kind of a steering head.

Handle bars mounted in this way can't be forced from their correct steering position by road shocks or the difficulties of steering in deep ruts and sand.

EVERY POPE MODEL HAS THIS SAFETY STEERING DEVICE.

Our catalog tells you all about Pope Motor Cycles, explaining the advantages of the Pope Overhead Valves Motor; the Pope Rear Helical Spring Suspension; the Pope Spring Fork; and other characteristic Pope features.

Write Today for Pope Motor Cycle Catalog.

Guaranteed for 5,000 Miles— Usage far more

Automobile Tires —Motorcycle Size

All the successful and popular features of Pennsylvania Vacuum Cup Automobile Tires are found in

PENNSYLVANIA Oilproof VACUUM CUP TIRES FOR MOTORCYCLES

They are long-wear tires built to prevent skidding and to resist oil-rot. The Vacuum Cups hold the road firmly, preventing tendency to skid. The touch knobs forming the cups, strengthen and add life and long wear to the tires. The rubber composition is Oilproof. Oily roads cannot injure it.

Each tire is guaranteed for 5,000 miles; often good for as many miles more.

Dealers don't have to argue to sell these tires. Motorcycle enthusiasts know their value and demand them more and more.

The R-S Guards the Nation's President

Models—

Twin, Chain Drive
$275

Tourist, Belt or Chain
$225

Service, Belt Drive
$200

On his automobile trips, President Wilson is invariably closely trailed by two motorcycle policemen whose duty it is to keep a watchful eye upon the nation's head to see that he comes to no harm. Obviously, their machines must be proof against any and all troubles. They must be fast—they must be silent. They must be clean-cut and graceful in appearance.

Is there any wonder that the R-S was chosen? What greater duty, what more responsible service can a motorcycle be called upon to perform than to guarding the President of the United States? Do you think the Washington Police authorities, who, by the way, use six Reading-Standards—chose the R-S haphazardly? Don't you think exhaustive experiments, merciless tests and keen investigations eliminated all other contenders for this high honor and left the R-S triumphant? That's understood.

Get our Art Catalog. It tells the rest of the story—the WHY of it.

Bulletin

On Decoration Day, at the Empire State Track at Yonkers, N. Y., an R-S Twin, John Cronan riding, won the ten mile amateur Race against six others. Time, 10:37. Next best time, 10:39⅘. Chalk up another for the R-S.

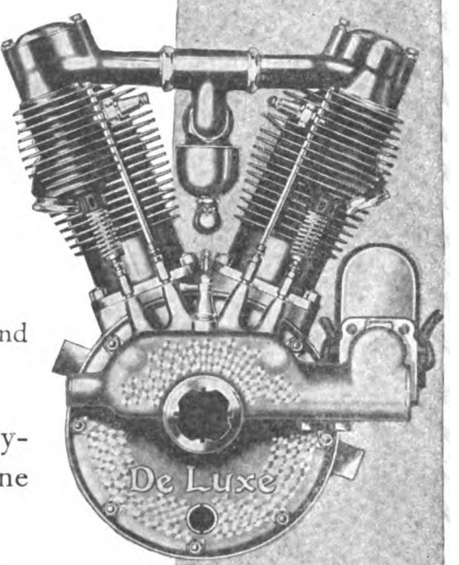
De Luxe Motors
The Heart of the Motorcycle

SO SILENT—that you almost forget that you have a motor running under you. It is like riding in a Pullman.

SO FAST—that you can pull away in an instant from any of your companions, and stay ahead of them.

SO CLEAN—that when you return from a run, your motor may be covered with gray dust, but will not look as if it had not been cleaned for a month.

SO POWERFUL—that you can climb the steepest hills and pull through the deepest sand, where others walk.



DE LUXE Motors have done more than anything else to elevate motorcycling to the high plane where no apology is necessary for it.

You cannot afford to be without these advantages, so choose a DE LUXE Motor equipped motorcycle and be a year ahead of the others.

SPLITDORF

"Always There"

The "female of the species"—the ever increasing army of charming women deciding in favor of the two-wheel "steed of the road" as a means of economical and healthful touring travel—is voting unanimously in favor of SPLITDORF IGNITION.

The reason is immediately apparent even to the lay observer of the popular trend of the times—SPLITDORF IGNITION can ALWAYS BE DEPENDED UPON. Faithfulness is the woman's cardinal demand—the new SPLITDORF MAGNETOS and the standard, common-sense SPLITDORF PLUGS are always faithful in foul weather or fair.

SPLITDORF IGNITION does away with distressing and disappointing roadside delays to the "road plugger" and "joy rider" alike.

A jewel-like SPLITDORF MAGNETO finds favor immediately on first appearance—the same SPLITDORF MAGNETO becomes endeared to every rider on practical acquaintance, owing to its staunch, rugged FAITHFULNESS in SERVICE. A SPLITDORF MAGNETO will fire AS SLOWLY AS YOU CAN PEDAL, and it is WATER PROOF.

SPLITDORF PLUGS are, as they always have been, the standard plug for the hardest usage—they don't fail. They are soot-proof—gas-tight and unbreakable.

Woman's intuition and practical common-sense are demanding SPLITDORF IGNITION.

DEMAND IT NOW.

Front View E U Magneto

"New ignition for old" is a special exchange proposition of great interest to every owner of a gasoline motor that is not equipped with SPLITDORF up-to-the-minute ignition. Save time and money and write or call for particulars today.

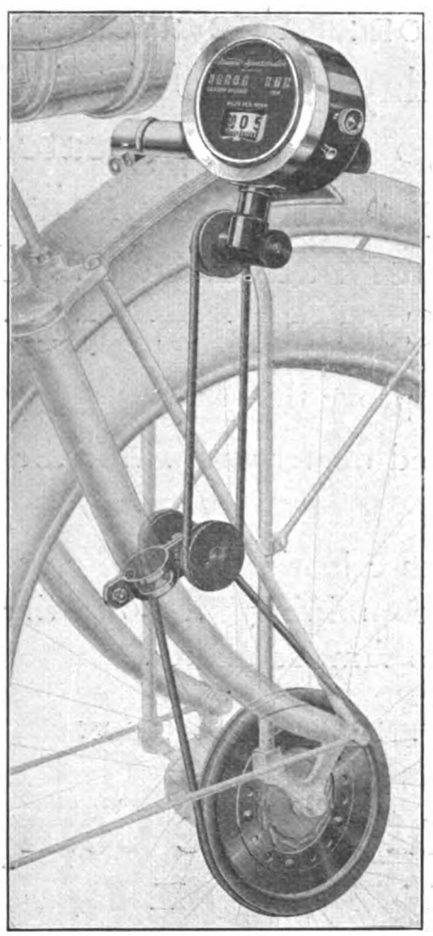
"Stewart" Motorcycle Speedometer

With New 2-Belt Front Wheel Drive



$12 (*Complete*)

75-mile speedometer; 100,000 mile season odometer, 100 mile trip register, which can be readily reset to any tenth of a mile without disturbing total mileage of season register, front wheel two-belt drive complete with pulleys and brackets.

THE one important essential in motorcycle touring, either competitive or for pleasure, is an absolutely reliable speedometer. An instrument that *cannot* be affected by vibration or road shocks of the roughest going must be used. Without such a perfect speedometer the value of the tour will be lost, for speed and mileage records will be erroneous—and therefore worthless.

The new Stewart Motorcycle speedometer has been proved absolutely correct in thousands of tests, under every condition of weather and travel. It is the only simple, practical and reliable motorcycle instrument made. The coiled steel piano wire belts of the new two-belt front wheel drive absorb every vibration and shock. The instrument cannot possibly be affected—at any speed—over any road.

The letter below gives evidence of Stewart worth and reliability under extraordinarily severe conditions. We have hundreds of others.

"Charlottesville, Va., May 10, 1913.
"Stewart Warner Speedometer Corporation, Chicago, Ill.
"Gentlemen:—

"Some time ago I purchased from you one of your 1913 Stewart motorcycle speedometers, which I have put to a test of nearly ***1000 miles*** of the roughest riding over Virginia ***unimproved roads.*** I have smashed my front wheel and broken the leaf spring on which the speedometer was installed and it has escaped any injury.

"A friend of mine had a ..... speedometer which, after five hundred miles riding, was only fit for the junk pile—and he had no accidents of any kind. I think this little comparison will show the superiority of the Stewart.

"I am tourmaster of the first F. A. M. tour in Virginia for the second day's run from this city to Richmond, and have every confidence that my Stewart will be the one to check off the correct speed that will be set.

"Very truly yours,
(Signed) "J. F. S. DUKE."

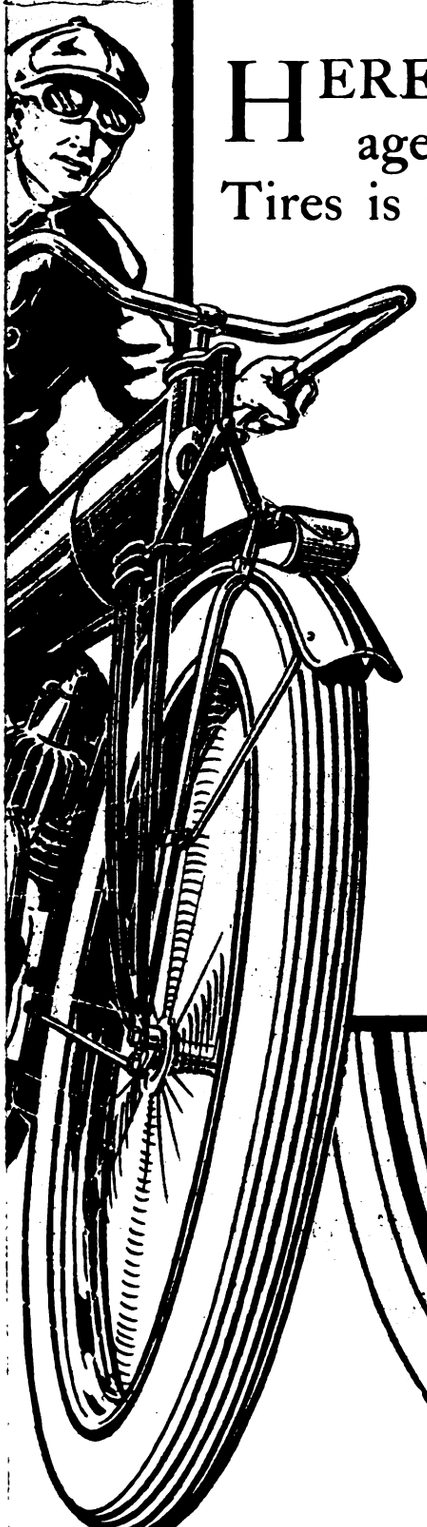
United States Tires

cut down tire bills



HERE is the reason: The average mileage yielded today by United States Tires is from 25 to 50 per cent greater than that given by any make of tires previous to the formation of the United States Tire Company two years ago.

Our own records prove this.

Every unprejudiced dealer and user in the country will admit it.

This radical increase in tire mileage comes as the logical result of combining into one tire all the best points of two famous makes.

Washington Motorcyclists Test Ordinance

Two Riders and Their Wives Violate Unreasonable Tandem Regulations and Suffer Arrest in Order to Furnish National Capital Club with Grounds for Continuance of Legal Fight.

THE Legal Action Committee of the National Capital Motorcycle Club has entered into the second stage of its fight against arbitrary police regulations in the District of Columbia. On Thursday, June 6, at 4 p. m. a test was made of the regulation prohibiting the carrying of a passenger except on a certain specified form of tandem attachment prescribed by the Police Board which has charge of the issuing of permits to carry passengers. Test was also made of the ruling of this board which declares that only male passengers be allowed to ride on tandem attachments for which permits to carry passengers have been granted. The persons volunteering to take part in the test were Frank S. Long and wife mounted on a Henderson motorcycle, and Edmund A. Mitchell and wife, of Guilford, Howard County, Maryland, who rode an Excelsior. The test was staged in Rock Creek Park on the outskirts of Washington, D. C., and the arrests which were necessary were made by Motorcycle Officer Trennis of the Rock Creek Park Squad of the District of Columbia police department. He courteously allowed the riders concerned in the test case to depart without compelling them to go to the police station merely requesting them to appear in the police court at 10 a. m. the following morning.

The attorney for the Legal Action Committee, William E. Ambrose, appeared before the court the following morning, Saturday, June 7, and requested a postponement of the case in order that all the evidence be put in writing and brought to the court. The court set June 16 as the day for the trial of the case, which is expected to be quite long drawn out, as every aspect of the situation will be taken up in order to have a substantial basis for an appeal to a higher court if necessary. It is the determination of the Legal Action Committtee of the National Capital Motorcycle Club, which is backed by the Legal Action Committee of the Federation of American Motorcyclists and the Motorcycle Manufacturers' Association, to carry this case to a final decision which may be used as a precedent in similar cases all over the country.

J. W. Henderson, president of the Henderson Motorcycle Co., of Detroit, Mich., was in Washington several days last week in consultation with Frank Long, Legal Action Chairman of the National Capital Motorcycle Club. Mr. Henderson, in company with other manufacturers of motorcycles and accessories, is interested in the Legal Action Committee's fight, and promised to bring the matter before the Motorcycle Manufacturers' Association at their meeting in Buffalo, June 11.

Motorcycles Barred From C. R. R. Trains and Boats

Railroad Officials Refuse to Transport Machines on Any Basis, Even with Tanks Empty, and F. A. M. Legal Action Committee Takes Action Looking Toward Modification of the Ruling.

ONE of the latest problems to confront the National Legal Action Committee of the F. A. M. is based on a ruling of the Central Railroad Company of New Jersey that motorcycles will not be carried on its trains, or on the boats plying between New York City and New Jersey coast points over the Sandy Hook route. This announcement was made a few days ago in reply to a letter from A. H. Hyde, of Yonkers, N. Y., who requested information relating to the transportation of his motorcycle on one of the company's Sandy Hook boats. Mr. Hyde at once forwarded the railroad company's letter to Chairman J. Leo Sauer, of the F. A. M. Legal Action Committee, who took up the matter with C. R. R. officials. Later he addressed communications to the Pennsylvania Railroad Company and the New York Central Railroad, requesting full information with reference to similar regulations and suggesting that steps be taken to modify them. At this writing replies have not yet been received.

The ruling applies to automobiles and aeroplanes as well as motorcycles, and apparently is subject to no qualifications. In writing to the C. R. R. officials Mr. Hyde, the Yonkers motorcyclist, explained that his gasoline tank would be emptied before the machine was presented for transportation, but this had no bearing upon the situation. Mr. Hyde is authority for the statement that motorcycles were carried on the Sandy Hook boats of the C. R. R. several years ago, and just when the new ruling went into effect has not been ascertained. That it has not been called to attention previously is due no doubt to the fact that motorcyclists traveling from New York City to New Jersey coast points almost invariably make the trip in the saddle and do not need either trains or boats, excepting the ferryboats to Jersey City or to St. George, Staten Island.

The letter of the Central Railroad Company to Mr. Hyde is as follows:

"Your favor of the 22d instant, to Mr. P. W. Heroy, has been received, and in reply would state that we do not accept motorcycles for transportation on either the boats or trains of this company as part of passenger's baggage or free allowance thereof, nor have we any tariff filed with the Interstate Commerce Commission covering such arrangement. Such being the case, I regret that it would not be lawful for me to give you the permit desired." The letter is signed by General Passenger Agent Pope.

Chairman Sauer's letter addressed to the officials of the three railroads mentioned above read as follows:

Digitized by Google

"Will you be good enough to advise, if it is consistent, why the railroads, as I understand it, have made a ruling to the effect that 'automobiles, motorcycles, aeroplanes, and other machines propelled by motor attachment, are not to be accepted for transportation'?

"As Chairman of the Legal Action Committee of the Federation of American Motorcyclists, with a membership of twenty thousand, I am in constant receipt of letters complaining against this ruling, and I wish to know whether something cannot be done to modify it. Owners of motorcycles are willing, of course, to remove gasoline before tendering their machines as baggage."

Brighton Bowl Continues to Fly F. A. M. Banner

WITHIN a few hours of the opening, on Decoration Day, of the Brighton Beach Stadium, Chairman Thornley, of the Competition Committee, and Chairman Sauer, of the Committee on Legal Action, succeeded in persuading Manager Wellman that he had nothing to gain, and possibly a lot to lose, by breaking away from the F. A. M. As a result of the three-hour conference, conducted in all friendliness on all sides, Wellman agreed to amend his contracts with riders to provide that his races would be run under the rules and regulations of the federation and with the sanction of its Competition Committee. Wellman agreed to accept Pitman's refereeship the first night in view of an understanding that he should be succeeded by Lawson Robertson. Robertson was not only the choice of Wellman, but also that of all the riders, and Thornley and Sauer came to the conclusion that a referee favored by both the management and the riders would not be likely to encounter any serious difficulties in running the Brighton Beach meets.

As a matter of fact, everybody concerned seems to be satisfied with the new arrangement, and the situation at the present time is all that could be desired, and promises to remain so indefinitely.

The Brighton Beach situation also involved Philadelphia. Had Brighton Beach gone "outlaw," the Point Breeze track in the City of Brotherly Love would have followed suit. By the same token, Wellman's conversion brought back into the F. A. M. fold the Philadelphia motordrome.

The change in the refereeship at Brighton is regarded by no one who knows anything about the situation as a reflection upon the ability of "Happy Days" Pitman. However, Pitman, Wellman and the Brighton Beach riders were simply unable to get along together and, under the circumstances, Thornley and his fellow director agreed with Wellman that his insistence upon a change could not be considered unreasonable. The conference was almost broken up several times, but in the end the conferees succeeded in reaching an adjustmen involving observance of the principle for which the chairman of the Competition Committee was fighting and, at the same time, a very healthy concession to the manager of the track.

Arthur Chapple "Breaking In" a Recruit at the Brighton Motordrome.

Manufacturers' Cup Goes to Yale Squad at Newark

Indian Team Makes a Good Second in Two-Day Endurance Trial and Gold Medal For Most Consistent Riding Goes to Andrew Bohsen, an Excelsior Rider—Secret Time Run For July Fourth

NEWARK, N. J., June 11.—At a special meeting of the New Jersey M. C. last night the final returns on the endurance run held May 30-31 were considered, and several questions that had been raised relative to the standing of contestants were disposed of.

The manufacturers' cup goes to the Yale team, which was made up of P. W. Stevens, George Riechey and O. W. Stevens. There was some talk of a protest based upon the claim that one of the Yale squad had been forced to make tire repairs in a control, but no formal complaint was registered and the committee ruled that the Yalesters were fully entitled to the trophy.

An effort was made to have two members of the Indian team, Zimmerman and LaRoe, credited with perfect scores, but it was decided that the committee would not be justified in changing their standing. These riders received 996 points each, and the third member of the Indian team finished with a score of 729. The four points lost by Zimmerman and LaRoe were taken off at Suffern, where they were nine minutes late checking out. The schedule allowed them leeway of five minutes, but the remaining four counted against them. The Indian team also receives a cup as the second team prize.

Andrew Bohsen, of West Orange, an Excelsior rider, will receive a gold medal for having the most consistent score. He finished with 873 points out of a possible 1,000. Peter Bohsen, also mounting an Excelsior 7, had a score of 870, and was therefore in second place for consistency. P. W. Stevens, Yale, finished in third place with reference to consistent road work, his score being 849, and George Riechey followed him with 847 points.

Those who finished the run were Peter M. Bohsen, West Orange, 7 h. p. Excelsior; Andrew Bohsen, West Orange, 7 h. p. Excelsior; Elliott B. Holton, Newark, 7 h. p. Excelsior; W. Ed. MacDougall, Jr., Newark, 7 h. p. Harley-Davidson; Alexander Klein, Philadelphia, 7 h. p. Harley-Davidson; Arthur LaRoe, Perth Amboy, 7 h. p. Indian; A. J. Zimmerman, Springfield, Mass., 7 h. p. Indian; C. A. Leander, 7 h. p. Yale; O. W. Stevens, West Orange, 7 h. p. Yale; George Riechey, East Orange, 7 h. p. Yale, and P. W. Stevens, West Orange, 7 h. p. Yale.

At last night's meeting the club decided to hold a secret time run on July 4, from Newark to Asbury Park. The riders will be started at 8 a. m. and will be called upon to make the trip down along the Jersey coast as closely as possible in keeping with a secret running schedule. President Roy Pascall will check the boys out in Asbury Park, and will also have a secret check or two to keep tab on the riders as they approach their destination.

Charles N. Jones, of the Harley-Davidson

Digitized by Google

team, is given special credit for his game showing in the May 30 run. After a severe fall he continued in the running and managed to finish, thus bringing his team into third place in the contest for the manufacturers' trophy. His mount gave an excellent performance despite the fact that it was damaged in the spill.

OHIO CONVENTION PROGRAM

Commissioner Campbell Announces Strong Line-Up of Entertainment Features for First Big Assembly.

F. A. M. State Commissioner Jesse Campbell has just made an official announcement of the program for the Ohio State convention, to be held June 21-22, and even a casual glance over the list of features will leave no doubt as to the thoroughness with which arrangements for the assembly have been carried through. The tourists will arrive in the convention city on Friday, June 20, and the afternoon will be devoted to checking in the riders and taking photographs of the divisions. On Friday night there will be a sail on Lake Erie, free to F. A. M. members.

The convention will be held on Saturday morning, June 21, at the Hollenden Hotel, and Saturday afternoon will be given up to sightseeing and swimming at Euclid Beach. In the evening there will be a special racing program at the Luna Park saucer, and admission will be free to all visiting F. A. M. riders. After the races the F. A. M. membership cup recently won by the Cleveland M. C. will be presented by Director J. Leo Sauer, and there will also be addresses by President A. B. Coffman, of the Motorcycle Manufacturers' Association, State Commissioner Campbell and others. The cup will be presented in the arena of the motordrome. Later there will be a Dutch lunch.

On Sunday morning there will be a motorcycle parade and $100 will be offered in prizes. On Sunday afternoon the State Championship races will be staged on the Randall Park track. Gold, silver and diamond medals will be the awards, and trophies embodying the shield of the State of Ohio and the F. A. M. emblem in an artistic design. The program will close with more races on Sunday evening at Luna Park.

ON A FLYING TRIP

Walter Davidson Finds Dealers Satisfied and Conditions Encouraging on All Sides —New Fore-Car on the Way.

PRESIDENT WALTER DAVIDSON, of the Harley-Davidson Motor Company, visited New York this week in the course of a rapid-fire tour of the East and the Middle West. On his way to the metropolis, he made stops in Cleveland, Buffalo, Rochester, Syracuse, Utica and Springfield. Leaving Gotham yesterday morning, he stopped at Philadelphia, and then Baltimore, Washington and Pittsburgh. He found that the Harley-Davidson dealers had in nearly every instance estimated their 1913 sales to a nicety and that in many of the smaller cities re-orders were the usual thing.

The Harley-Davidson policy has always been a conservative one, and President Walter expressed himself as more than satisfied with the results. No tremendous increase in the 1914 output over that of 1913 is anticipated by the company. Instead, the company will make it a point to put forth its best endeavors to further improve a most efficient factory organization. So rapid has been the growth of the Harley-Davidson business, and so persistent the demand for more space and facilities, as to cause one to wonder how so large and steady an output could have been possible in the face of constant building construction for several years.

Plans are well under way for placing a cleverly designed fore-car on the market in the near future. This model will be complete in every way, and at the same time moderate in price. It promises to be immensely popular for commercial use.

LIVELY LAMP BUSINESS

C. F. BROOKS has recently returned from a business trip through New York State, showing the complete 20th Century Lamp line. The firm's new model No. 2, for bicycles, was most enthusiastically received and they report a large sale already for this efficient lamp. Mr. Brooks states that general motorcycle business conditions are very good, and that all jobbers are piling up orders.

M. M. A. Discusses Show Plans at Buffalo

BUFFALO, N. Y., June 11.—There was a representative gathering of trade boosters on hand when the meeting of the Motorcycle Manufacturers' Association was opened at 10.30 today, and considerable business was transacted before a recess was taken pending the arrival of a telegram from Chicago with reference to an option on the Coliseum for the independent motorcycle show in November.

Those in attendance were: Pete O'Horo (Excelsior Cycle Co.), W. G. Schack (Emblem Mfg. Co.), Arthur Davidson (Harley-Davidson Motor Co.), Col. A. L. Pope and E. L. Hardin (Pope Mfg. Co.), A. W. Mitchell (Black Hawk Motor Co.), Frank Schwinn (Excelsior Motor Mfg. and Supply Co.), H. N. Kirk (Aurora Automatic Machinery Co.), G. E. Atkins (The Reading Standard Co.), T. W. Henderson (Henderson Motorcycle Co.), R. D. Webster (Eclipse Machine Co.), L. G. Reid (Firestone Tire and Rubber Co.), Frank W. Pardee (Ericsson Mfg. Co.), Bert Quayle (Standard Welding Co.); W. P. Schamber (Minneapolis Motor Co.); A. B. Coffman.

The show committee was authorized to enter upon negotiations with Samuel A. Miles for space at the Grand Central Palace, New York City, in connection with the next national automobile show. It is likely that the motorcycle exhibit will be located about as it was for the last show, but there will probably be a slight increase in the area occupied.

When reference was made to the independent show in Chicago it was explained that the committee would not be able to make a definite report until a telegram embodying further information was received, and it was for this reason that arrangements were made for a recess until 3.30 this afternoon.

Following the morning session, W. G. Schack, the genial Emblemite, gave a luncheon which was attended by the trade representatives, eighteen in all.

The members of the M. M. A. not represented at the session today were fined $25 each. The next meeting will be held at Atlantic City, on August 6.

RAPID-FIRE SALES WORK

"SPEAKING about rapid-fire selling," said Gid Haynes, a traveling salesman of the Excelsior Motor Mfg. & Supply Co., of Chicago, in a recent interview, "I think I hold a record or two in that line. Not long ago I left Kansas City on Friday evening and arrived at my next stop at 7:30 the next morning. I jumped into a cab, went to a hotel for breakfast and was at the agent's store by 8 o'clock. Without delay I started talking carloads to the proprietor, assuring him that it was for the purpose of giving him the benefit of reduced freight rates. Upon learning that he did not have enough money in the bank to pay for a carload I asked him when the bank opened and learned that it would be ready for business at 9 a. m. I then took him out for a walk, incidentally dropped in at the bank, and in an interview with the cashier I explained my mission, stating why it would be good policy for my friend to buy a carload of machines. The cashier agreed to let the agent have the necessary money and by 10 o'clock I was on my way to the next town with a carload order in my pocket. Quick work, eh?"

EXPECTATIONS EXCEEDED

ALTHOUGH the Lowenberg Company, of Newark, N. J., made arrangements to handle a material increase in business for this season it was not fully prepared for the remarkable demand that is now being felt for its line of motorcycle clothing and sporting goods, and as a result it has not been possible for the firm to make shipments with its accustomed promptness. The company makes this statement by way of apology for any annoyance that may have been occasioned by the delays, and states that from now on shipments will be made more promptly. In August the Lowenberg company will send its representative, L. N. Smith, on an extended business trip. He will show a full line of fustians, whipcords and moleskins for fall and winter wear.

IN LARGER QUARTERS

TO CELEBRATE the acquirement of a new clubhouse a large number of the members of the Maryland M. C. turned out at the last meeting, June 4, to bid goodbye to the old quarters which have been occupied for a long time. The new clubhouse is located at 7-9 East North avenue, in the heart of the automobile district.

MOTORCYCLES IN CIVIC PARADE

ONE of the leading features of the parade in which 12,000 employees of New York City participated on Saturday, May 17, was the motorcycle squad, under the direction of Sergeant Samuel W. Johnson.

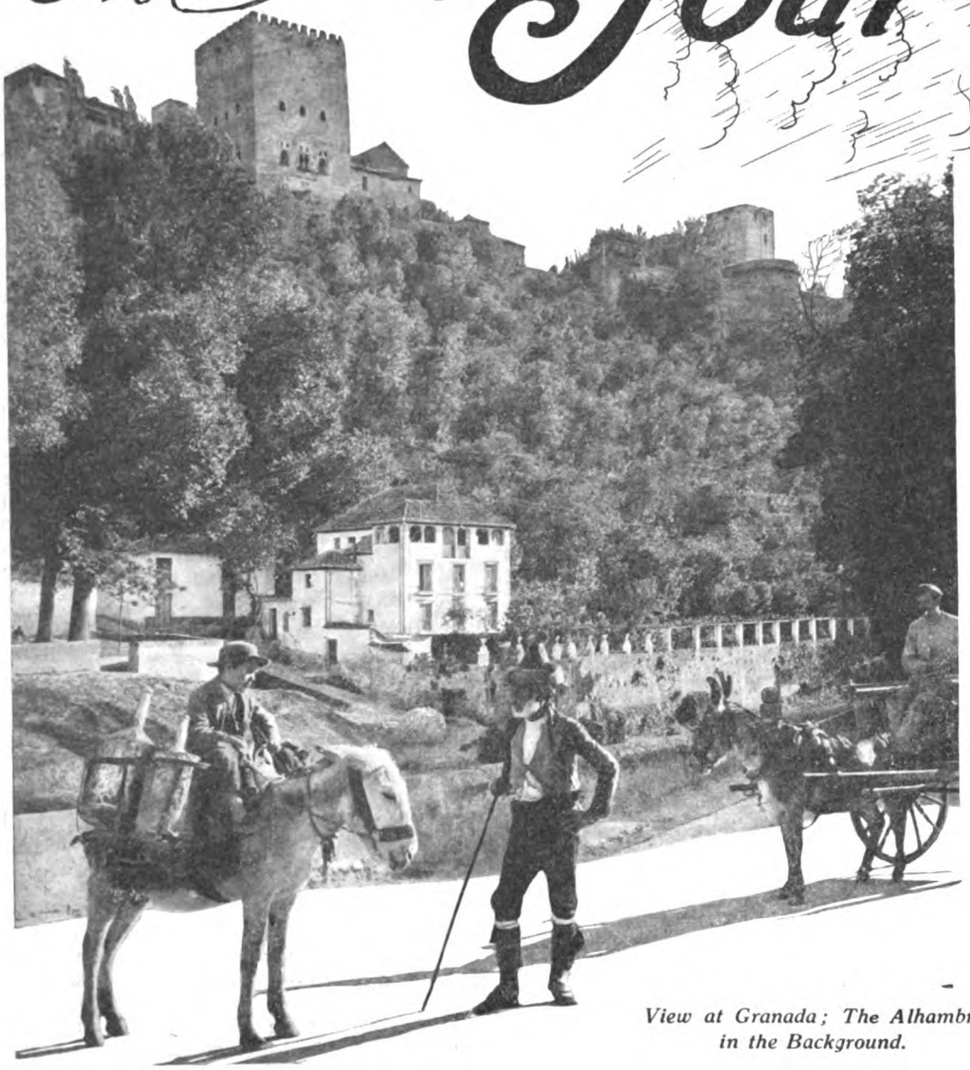
A Motorcycle Tour in Spain



View at Granada; The Alhambra in the Background.

FOR the American motorcycle tourist abroad who can dovetail his schedule with his inclinations there are so many attractions that it is difficult to find time for many excursions off the main-traveled routes, and this no doubt accounts for the fact that comparatively little has been heard of the widely-varied scenic inducements offered by Spanish roads. True enough, Spain has not escaped the insatiable automobilist. For years past the four-wheeler has poked into every picturesque nook and cranny of the country, but it is safe to say that not more than half a dozen of the scores of American motorcyclists who have enjoyed European tours in the last two years have extended their itineraries into the land of the Don.

Nor can this be held against road conditions, for Spanish roads, while often dusty and featured by quite stiff grades, are usually of fairly good surface. Were it otherwise some of the climbs found on the most striking routes would probably balk the sturdiest of two-wheelers. Many of the main roads are very old, but of such construction that they practically defy wear and the elements. It must be admitted that they are sometimes narrow, but this is a condition that need not deeply concern the seasoned motorcycle traveler, and at all times the scenic panorama is worthy of the tourist's best efforts.

ON A PICTURESQUE ROUTE.

It is safe to assume that the American motorcycle tourist in Spain will find something to interest him at every turn of the road, and he may not consider it necessary to map a long trip and adhere strictly to any given route. Still it is obvious that a tour planned carefully in advance, and with regard for the most attractive cities and the points of historical and scenic interest, will always give the greatest returns. It hardly pays the motorcycle visitor to dash into Spain, say to Madrid, and then wheel about and skip back over the French border, for by so doing he obtains only a taste of what the country has to offer in the way of motoring inducements. He may even be dissatisfied with his jaunt, for he will have missed the finest scenery and some of the best roads, whereas a more leisurely journey would have forced him to admit that any slight annoyances were fully offset by the multitudinous charms of the colorful towns and their quaint inhabitants.

Let us take it for granted that the motorcyclist has arranged for an indefinite stay in Spain; that a few days more or less will not perturb him. If this is the case he cannot do better than to make what is practically a circuit of the country, starting in either the northwestern or northeastern corner and following the coastline as far as is possible. Such a route will permit of visiting many interesting cities and towns, and will also avoid the worst of the mountainous country. Spain's mountain ranges extend generally east and west, and it follows that any circuit of the country must entail some climbing. In the far north there are the Cantabrian mountains, which run almost parallel with the coast and appear to merge with the Pyrenees at the French border. In the central part of the country is the Sierra Guadarrama range and to the south are the Sierra Morena and Sierra Nevada ranges with a few smaller ranges such as the Montes de Toledo and the Gredos.

SOUTHWARD FROM SANTIAGO.

If the tour is to be started from Santiago or some other city in the northwestern district there will be only an easy three-day run to Madrid. The motorcyclist who wishes to cut down this time can do so without difficulty, but it is likely that he will feel justified in devoting the best of three days to this leg of his journey. Roads are fair but the hotel accommodations are not to be boasted of even in quite pretentious towns, and native cooking may give the visitor many an uneasy moment until he accustoms himself to it. Hotel and restaurant rates are usually quite low, and the *rioja*, a native wine that reminds one of claret, costs only a *peseta* for a quart bottle.

After leaving Santiago the traveler will pass through a number of smaller towns and finally arrive in Valladolid, a city of some importance lying to the northwest of the capital. It is then necessary to engage in some mountain climbing before arriving in Madrid, which city is located at an altitude of about 2,400 feet. Madrid is always worthy of the visitor's most careful attention. It has some beautiful pieces of architecture, many imposing avenues and public squares featured by statues, and on all sides there is evidence that the people spend much of their time in the open air.

From Madrid the route may lead to Toledo, which the tourist will at once associate with

Digitized by Google

the manufacture of finely-tempered swords. This industry at one time brought the city into great prominence, but the visitor of today will find the inhabitants fairly well satisfied to rest on past accomplishments. From Toledo it will probably be well to strike in a southwesterly direction, for Badajoz, an important city on the Guadiana river and near the Portugal line. Ciudad Real will probably prove satisfactory for a night stop, and the Montes de Toledo will be left to the right as the traveler turns westward.

ON THE SOUTHERN COAST.

On leaving Badajoz the rider will strike through the Sierra Morenas and arrive in due time at Cordova, a rather impressive city on the Guadalquivir river. He will then have only a short run to Seville, the city which inspired Rossini to compose "Il Barbiere di Seviglia." Thence the route is to Jerez, which is pleasantly situated and calculated to hold the tourist for a day or two. From Jerez an enjoyable trip may be made to Cadiz, the famous city on the southern coast, which is almost surrounded by the sea. While in this neighborhood the traveler should not fail to visit Algeciras, from which point one of the most striking views in all Europe is obtainable. Across the water from Algeciras is the towering rock of Gibralter, and in the distance may be seen the African coast and under favorable conditions it is even possible to discern the Atlas mountains, snow-capped and awesome.

Malaga will be the next stopping place on the coast route northward from Algeciras. Here there is much to be seen that will interest the American tourist, not least among the city's attractions being a famous bull ring. From Malaga the most desirable route is still northward to Granada. This city lies at the foot of the snow-capped Sierra Nevada and its situation is one of the most beautiful imaginable. It is very old, having been founded before the year 800, and possesses many features of historical interest. For the motorcycle visitor who carries a camera Granada offers practically an unlimited field.

The tourist will be especially interested in the old quarter of the city, with its Hispano-Moorish architecture, and the wonderful Alhambra is in itself worth a trip abroad. The beautiful cathedral, the Carthusian convent and the far-famed Alameda walk should not be overlooked, and for the antiquary and the lover of pictures there are many special attractions. One of Murillo's most wonderful paintings hangs in the Carthusian convent.

TO CARTAGENA AND BARCELONA.

From Granada the tourist will no doubt decide to turn his machine for Cartagena, which lies slightly to the northeast, amid most pleasing surroundings. He will encounter the lower slopes of the Sierra Nevada on this leg of the tour, but should experience no great difficulty in maintaining a satisfactory running schedule. It may be necessary to stop at a peasant's cottage here and there in lieu of hotels, but this will only add to the interest of the trip and give a new insight into the life of the great rank and file. Fresh fruit will be found plentiful and the supply of *rioja,* or native wine, is inexhaustible. It can be obtained almost anywhere.

Northward from Cartagena to Barcelona the route follows the coast quite closely, and for about 400 miles the tourist will always be able to rest his eyes by turning them to the blue sea. This section of the trip can probably be made in two days if the motorcyclist is so inclined, but a week can be devoted to it with good results. It is inadvisable to hurry, for there is so much to be seen that frequent stops will be found necessary by the tourist who wishes to make the most of his outing.

Stops may be made at Valencia, Castellon de la Plana and Tarragona on the route to Barcelona. And what is more to the point, each of these cities will offer the traveler a new thrill, a novel scenic effect, a wonderful piece of architecture; something calculated to cling in his memory long after minor details of the outing have been forgotten. On arriving in Barcelona the rider may proceed northward into France, or he may swing westward through a number of picturesque little towns with the Cantabrian mountains on his right hand and finally reach Santiago again, his starting point.

SPANISH ROAD RACE

JULIAN OLAVE, Indian dealer at San Sebastian, Spain, will enter a team in the Spanish international motorcycle road race, scheduled for Sunday, July 20. The race will be held over the 100-mile course from San Sebastian to Bilbao and return.

WARNING FOR PENNSYLVANIANS

SPEED traps are being operated along the Philadelphia Pike, from Pittsburgh East as far as Ligonier. A number of riders have been fined for tearing through East McKeesport at an unreasonable pace, and the authorities are determined to put a stop to the practice. The trap in East McKeesport is a measured half mile from the top of the first hill, after crossing the car tracks, to the cemetery. Constables and witnesses with stop watches are on hand, especially on Sundays. Riders traveling this route should use caution. In Pennsylvania the permissible speed on country roads is limited to 24 miles per hour, very much faster than some Keystone roads can be negotiated, but the stretch from Pittsburgh to Greensburg is a regular 60-mile-an-hour road, and the temptation to "beat it" is indeed strong. Riders not burdened with superfluous cash should exercise a grain of caution.

Sidecar Division of Providence (R. I.) Squad Ready for Recent Annual Picture Run. The Strongest Sidecar Showing Ever Made in the East.

Expect 3,000 California Riders at Convention

Elaborate Program is Ready for First Annual Assembly of State F. A. M. Body to Be Held at San Jose, June 21-23—Big Squad of Sunset Ramblers Will Spend Day in the Convention City.

IT is expected that at least 2,500 F. A. M. members will attend the California State convention to be held in San Jose, June 21-23, in addition to 400 or 500 riders of Los Angeles and vicinity who will stop over for a day at the assembly while on the Sunset Ramble. Accordingly the committee in charge of arrangements for the convention is making elaborate preparations to entertain visitors. Dealers and riders have shown willingness to co-operate and as a result it has been possible to prepare for the first annual gathering of the State Federation body under most auspicious conditions.

The local F. A. M. committee appointed by the San Jose Motorcycle Club, consisting of A. C. Banta, L. Sorenson, J. C. Harris, C. D. Reade and H. Hunt, announces the following program:

Friday, June 20, will be devoted to an informal reception and registration of delegates and visitors in the clubrooms of the San Jose M. C., at 128 East Santa Clara street.

A number of side trips are planned for Saturday, the twenty-first. Among the points to be visited on these jaunts are Lick Observatory (Mt. Hamilton), Congress Springs, Port San Jose, New Almaden and Guadaloupe quick silver mines, Madrone Hot Springs, Big Trees, Leland Stanford, Jr., University and other interesting places. At 7 p. m. there will be an illuminated motorcycle parade, prizes for which have been donated by the dealers of San Jose. After the business session of the convention, which starts at 8:30 p. m. in the convention hall of the Chamber of Commerce, the schedule calls for a grand ball in Turn Verein Hall to be given by the San Jose club.

The riders will leave San Jose at 9 a. m. Sunday, the twenty-second, for a run to Alum Rock Canyon. After a panoramic photograph and moving pictures are taken there will be a barbecue and dance. At 1 p. m. the riders will leave the canyon for San Jose driving park, where a race meet will be held. The races will begin promptly at 2 p. m. and State Referee Claude H. Lashlee will officiate.

The clubrooms of the San Jose M. C. will be open for the accommodation of visitors during the convention and special arrangements have been made with the hotels, whereby visiting riders will be given low rates. All garages and motorcycle shops have agreed to store motorcycles gratis. Riders desiring information as to hotels should write to L. Sorenson, 165 East Santa Clara street, San Jose, in order to obtain satisfactory results.

F. A. M. GAINS FOR MAY

Secretary Gibson's Report Shows That 726 Affiliated Riders Were Enrolled During the Month—The State Figures.

DURING May an unusually large gain in affiliated members was realized by the F. A. M. National Secretary Gibson forwards the following statistics showing the increased memberships in each state:

Maine—unaffiliated, 1; renewal 1; Massachusetts—affiliated, 12; unaffiliated, 8; renewals, 12; Connecticut—renewals, 2; New York—affiliated, 124; unaffiliated, 28; renewals, 67; New Jersey—affiliated, 43; unaffiliated, 14; renewals, 27; Pennsylvania—affiliated, 44; unaffiliated, 15; renewals, 36; Maryland—affiliated, 30; unaffiliated, 1; renewals, 12; Virginia—affiliated, 5; unaffiliated, 2; renewals, 11; West Virginia—affiliated, 4; unaffiliated, 1; renewal, 1; District of Columbia—affiliated, 5; renewals, 6; Tennessee—affiliated, 29; renewals, 2; Georgia—unaffiliated, 6; renewals, 3; Florida—affiliated, 1; renewals, 2; Alabama—renewal, 1; Louisiana—affiliated, 2; unaffiliated, 1; renewals, 2; Texas—affiliated, 67; unaffiliated, 2; renewals, 3; Kentucky—affiliated, 2; unaffiliated, 1; renewals, 3; Oklahoma—affiliated, 13; unaffiliated, 1; Ohio—affiliated, 92; unaffiliated, 54; renewals, 72; Indiana—affiliated, 66; unaffiliated, 7; renewals, 51; Illinois—affiliated, 34; unaffiliated, 14; renewals, 37; Missouri—affiliated, 17; unaffiliated, 2; renewals, 10; Wisconsin—affiliated, 17; unaffiliated, 2; renewals, 9; Michigan—affiliated, 1; unaffiliated, 7; renewals, 9; Minnesota—affiliated, 2; renewal, 1; North Dakota—unaffiliated, 1; renewal, 1; South Dakota—affiliated, 19; renewals, 3; Nebraska—affiliated, 16; unaffiliated, 1; renewals, 7; Kansas—affiliated, 14; renewals, 5; Iowa—unaffiliated, 5; renewals, 7; California—affiliated, 8; unaffiliated, 2; renewals, 22; Nevada—unaffiliated, 1; Colorado—affiliated, 30; renewals, 13; New Mexico—unaffiliated, 1; Arizona—renewals, 2; Wyoming—unaffiliated, 2; Oregon—affiliated, 27; renewals, 4; Washington—affiliated, 3; renewals, 7; Panama—unaffiliated, 1; renewal, 1; Porto Rico—unaffiliated, 1; Mexico—unaffiliated, 1; Philippine Islands—affiliated, 5; renewals, 2. The total gains for the month are affiliated, 726; unaffiliated, 184; renewals, 467.

Raymond Ray, One of the Latest Additions to the Yale Traveling Staff. Note the "Big Y" Smile.

WINS A MOTORCYCLE

AS a result of the membership contest just closed by the Broome County Motorcycle Club, of Binghamton, N. Y., Alfred Worthine, of 89 Washington street, has a new Yale, which was offered as a prize. On the evening of May 28, members of the club paraded through the city headed by Motorcycle Policeman Donnelly, of the Binghamton squad. After the parade refreshments were served at the club headquarters. The contest resulted in heavy membership gains.

FIFTY motorcyclists of the Syracuse (N. Y.) M. C. recently made a Sunday run to Tuscaloosa. A feature of the run was the fact that all the riders wore the regulation khaki suits.

Four-Day Program Ready for Cycle Parts Convention

ALTHOUGH minor changes may still be made in the program for the coming convention of the Cycle Parts and Accessories Association in Atlantic City, plans for the annual gathering of trade workers are officially regarded as complete and members are now receiving circular letters giving an outline of what is in store for them. The convention will be opened on Tuesday, August 5, and as members and friends will arrive throughout the day the first special feature of the program will be held off until the evening. Then there will be a party on Steeplechase Pier, in connection with which each member will receive tickets entitling him to admission to all the amusement places. There will also be dancing.

On the morning of Wednesday, August 6, will be held the meeting of the Cycle Parts and Accessories Association, the session of the Cycle Jobbers' Association of America and the meeting of the Motorcycle Manufacturers' Association. In the afternoon of the same day there will be a reception for the ladies in the parlors of the St. Charles Hotel. All the ladies attending the convention are invited to participate in this feature of the program.

In the evening at 8:15 there will be a theater party at the Apollo Theater, where a New York company will present "Within The Law." Immediately after the performance there will be a midnight supper at the St. Charles Hotel. On Thursday morning, August 7, there will be meetings of the bowling and baseball committees at the St. Charles, and at 2:30 the joint meeting of the Cycle Trades Industries will be held. The latter will include the parts manufacturers, the jobbers' association and the motorcycle and bicycle manufacturers. The feature for the evening will be a bowling contest at Sweeney's Virginia alleys, located on the Boardwalk. The committee has secured the eight alleys for the bowling tournament and has also engaged the floor above the alleys which is equipped with pool and billiard tables, a shuffleboard, etc., so that those who are not bowling will be able to find amusement. As in the past, the winning team will receive bowling cups and there will be individual prizes for the bowlers making the first and second scores. There will also be a cup for the lady making the highest individual score, as two of the alleys have been set aside for the use of the ladies during the evening.

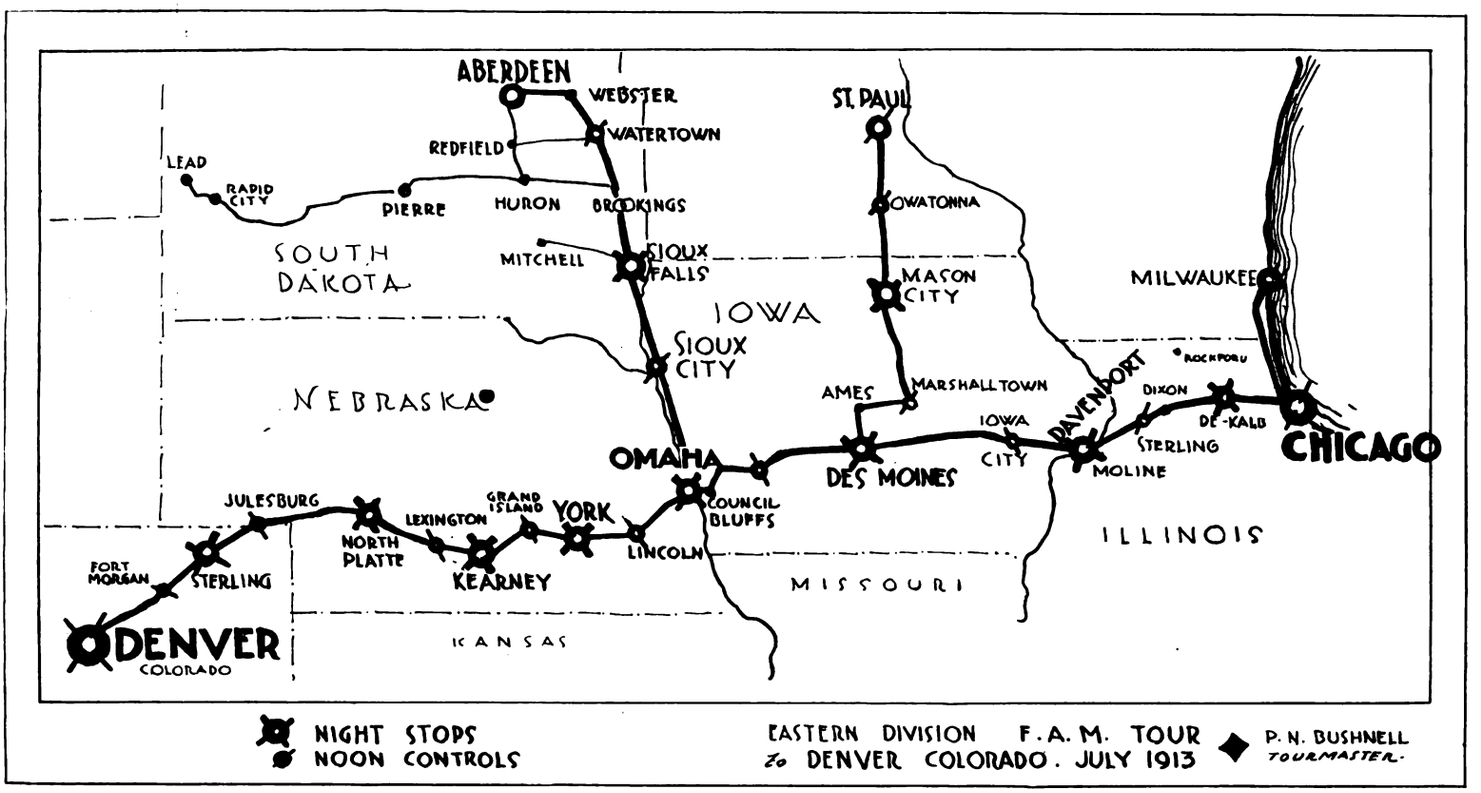
A ball game will open the program for Friday, the battle being waged on the Atlantic City baseball grounds from teams made up of jobbers and manufacturers. Bathing will be in order at any time, so that the visitors may take advantage of the surf without missing any of the other entertainment features. The various committees and the speakers for the joint meeting will be named at an early date.

It is evident from the outline given above that there will be few idle moments during the four days of the convention, and that the committee of arrangements, made up of W. J. Surre and David B. Smith, has made the most of its opportunities.

FOR TOURISTS

MOTORCYCLISTS who intend to visit the Gettysburg battlefield for the coming celebration will probably find it advisable to make a stop in Harrisburg, Pa., as accommodations in and about Gettysburg at that time will be somewhat strained. In Harrisburg the rider may visit the headquarters of the West End M. C. and obtain all necessary information relative to roads and other conditions. The West End club occupies quarters in the motorcycle establishment of the West End Electric & Cycle Co., Green and Maclay streets, and has grown so rapidly that a contract has been awarded for an addition to the building to give the organization more room.

Route for Eastern F. A. M. Tour to Denver Convention



WITH a view of having no less than three hundred riders in his division when it pulls into Denver, P. N. Bushnell, tourmaster for the Eastern Division of the National Tour, has sent out a strong circular letter to all F. A. M. members in his district telling them of his plans and what arrangements have been made to accommodate them on the tour. The Eastern Division starts from Chicago. Jesse Campbell, State F. A. M. Commissioner of Ohio, will take charge of the party until its arrival in Omaha, where Tourmaster Bushnell will join the riders with a squad from the Northern District and be in command until Denver is reached. Mr. Bushnell, who is State Commissioner of South Dakota, will leave Aberdeen with a squad of riders about the same time as the division under Campbell's direction leaves Chicago. The accompanying map shows the itinerary of the Eastern Division, including noon and night stops.

How F. A. M. Riders May Aid National Touring Bureau

Each Affiliated Motorcyclist Is Requested to File With the Bureau Data Covering at Least One of His Summer Trips—Suggestions as to Material Required and How to Prepare it—Log Sheets Ready.

HUNDREDS of motorcyclists who have been supplied with route information by the National Touring Bureau of the F. A. M. during the last few months are now making trips and obtaining first-hand data on road conditions and itineraries, and a few riders have already reciprocated by sending in to the Bureau valuable bulletins based on their touring experiences. This is a plan which all Federation riders are requested to follow, in order that the touring department may accumulate a fund of information—collected with special regard for the requirements of motorcycles. It goes without saying that the rider who covers a certain route on his machine is admirably fitted to post other motorcyclists, and while the details of the trip are fresh in his mind the tourist should embody all his data in a letter to the Touring Bureau and hustle it along to 51 Chambers street, New York City.

All material received in this way will be filed so that the next rider who needs information bearing on the route in question can be given the latest and most reliable information. Road surfaces are continually changing under traffic wear and the battering of the elements, and a highway indicated as "fair to good" on a map issued five or six months ago may now range from "bad to worse." There is no better way of collecting this precious data than through the club and the individual rider, for they are the ones directly in touch with the existing conditions. Maps cannot be changed except yearly; it is out of the question for official pathfinders to bulletin headquarters on every rough stretch, dangerous curve, washout, railroad crossing, bad hill, etc., as soon as they discover it, but it is a simple matter for the individual F. A. M. tourist to jot down a few notes and mail them to the Touring Bureau as soon as he returns from an outing. In this way he will assist his brothers of the road and they in turn, by submitting reports on their trips, will help him through the touring season. There is practically no limit to the scope of this policy of co-operation, and the ability of the National Touring Bureau to specialize upon data for the motorcyclists must depend to a great extent upon the riders themselves.

Practically all existing road maps have been prepared for automobilists, and while they meet the general requirements of the motorcycle tourist they pay little or no attention to several features that are of prime interest to the owner of a single-tracker. For example, no special effort is made to give the rider information concerning road surfaces on heavy grades, and it is vitally important that the motorcycle enthusiast be posted in this direction if he is to avoid trouble. The 30 or 40 horsepower four-wheeler can get over a bad hill in wet weather where the motorcycle would be entirely out of the running—because conditions would not permit of keeping it upright in the road. If you have been over such a grade and you are convinced that it would not be fit for travel by a motorcyclist immediately after a rainfall write a few lines to the F. A. M. Touring Bureau. You will save other riders from spoiling their outings by attempting the route in question and you will be rendering the finest kind of assistance to the Bureau.

Quite a few motorcycle tourists have explained that they do not know what is required in the way of information by the Touring Bureau, and that they have withheld their data because of the fear that they would encumber the touring department with material of no practical value. This situation need not give much trouble. When writing to the Bureau simply include such information as you would find necessary if you were preparing to go over the route for the first time. Write plainly and begin by giving the names of the cities or towns between which the tour was made. Then give the mileage, mention the different road surfaces encountered and tell approximately how much there was of each. If there are any stiff grades on the route state where they are located, give the estimated grade and the character of the road surface. Do not neglect to state whether you believe the route in general would be fit for motorcycle travel during or immediately after a rainfall.

If you found it necessary to stop overnight at a hotel or roadhouse and satisfactory service was received, it is advisable to mention this fact in your letter to the Bureau. If you were dissatisfied with either the service or the rates it is still more important that this information be included in your bulletin. The F. A. M. touring department aims to do more than simply map routes; it is desirous of safeguarding the tourist in every way possible throughout his trip, and pointers relative to suitable hotels and garages are of great importance.

If there is a deceptive turn, a grade railroad crossing, a speed trap or any other feature of the route that you would have been glad to know of in advance, you may take it for granted that other motorcyclists will appreciate such data and you should embody it in your letter. The Touring Bureau has a supply of log sheets, so arranged that information covering any ordinary trip can be worked out systematically and without confusion, and these will be forwarded to Federation riders promptly upon application. It is not necessary to use one of these blanks—the bureau will welcome your data in an ordinary letter—but matters will be considerably simplified if the log sheets are used. Letters should be brief (to permit of satisfactory filing), but they should embrace as many helpful suggestions as possible. A running story of the trip is not necessary. Simply pick out the salient points and send them in. It is hoped that each active member of the F. A. M. will supply the Touring Bureau with data on at least one tour made during the summer, and the suggestions above are offered with a view of facilitating the preparation and filing of the information. Address all communications to the F. A. M. Touring Bureau, 51 Chambers street, New York City.

A Striking Indian Outfit Photographed Recently in Central Park, New York City.

SNODGRASS'S VACATION TOUR

LEROY SNODGRASS, accompanied by Mrs. Snodgrass in a sidecar, is one of the first riders of Los Angeles to start his vacation on a motorcycle this summer. He recently left Los Angeles on a tour that will extend over three months, during which time he and Mrs. Snodgrass will live entirely out-of-doors. Their itinerary includes Albuquerque, Denver, Omaha, Kansas City, Detroit and New York.

Digitized by Google

NOT long ago "Billy" Grimm, of South Bend, Ind., invested in a Harley-Davidson motorcycle and found it so alluring that all his leisure time was spent on the road. This state of affairs aroused no enthusiasm in Mrs. Grimm and she announced that something had to be done to include her in the outings. "Billy" smiled knowingly and hitched a sidecar to his sturdy chugger. Now Mrs. Grimm is satisfied and Buster, the poodle, has expressed himself as tickled to death with the new arrangement, or words to that effect. Note the accompanying photograph.

LEARNING ENDURANCE RULES

IN ORDER to try out the endurance rules adopted by the Freeport M. C., of Freeport, Ill., the club recently held a trial endurance run to Lena and Pearl City. The circular course covers a distance of 33 miles. It was the object of the club to acquaint its members with the new regulations, as a number of endurance runs are scheduled for the season. The Freeport Club is now growing rapidly and will have a busy season.

Using Denatured Alcohol to Remove Carbon

Motor Expert Treats of Conditions Responsible for Carbonization, Discusses Need of Prompt Removal of Foreign Deposits and Reports on Test Cases in Which Alcohol Process Was Used.

IN an interesting pamphlet dealing with denatured alcohol as a decarbonizer and motor cleanser Joseph A. Anglada, M. E., embodies the following timely paragraphs relative to causes of carbon deposits and the necessity for removing them promptly:

"The subject of cylinder incrustations or carbonization is, of course, closely related to the subjects of lubrication and carburetion and there seems to be a divergence of opinion as to whether most of the carbon found in the combustion space of cylinders is due to fuel or the lubricating oil. It is often concluded that the carbon composing these deposits is derived from the lubricating oil, because of the solid nature of the deposits which sometimes appear slightly oily. It must be remembered that generally the surfaces of the combustion space are covered with an oil-film which forms an adhesive surface perfectly adapted to catch and hold whatever gasoline soot or other solid matter is brought into contact with them. It seems reasonable that a mass of oily carbon would be built up, if fresh oil and fresh carbon were being constantly supplied to these surfaces and that the heat of combustion would serve to consolidate these materials.

"Therefore it does not seem necessary to assume that the lubricating oil is decomposed to account for the carbon incrustations in the motor which is using an over-rich mixture. It is however, probable that the oil is also being decomposed; when one considers that generally in a motor which has run for some time, the underside of the piston head is coated with a carbon deposit. It might be well to mention here that a chemical analysis of so-called carbon deposit from the combustion space of an automobile engine, especially if this deposit has been formed during the summer months when the roads are dusty, will very likely show a percentage of silicates, which have been introduced in the form of road dust, held in suspension by the air passing through the carbureter. This dust upon coming in contact with the oily surface of the combustion space lodges there and combines with the carbon deposited, whether from the decomposition of the lubricating oil or the fuel, to form the incrustations.

"The presence of carbon deposits on the surface of the combustion space of any type of engine is to be avoided, because the radiation of heat to the outside surfaces of the cylinder is retarded. The presence of these deposits causes spontaneous ignition, which is a common source of rapid depreciation of the working parts of an engine, in addition to affecting the economical and quiet operation of the engine. Where the deposits are present in sufficient quantity, depending upon the design of the engine and the service in which it is employed, the operation of the engine may be entirely prevented, due to spontaneous ignition. The phenomenon of spontaneous ignition (sometimes called pre-ignition or self-ignition) is explained as follows: When the engine is in operation the temperature of the gases in the combustion space during the period of combustion, is sufficiently high to raise the temperature of the carbon deposit to a red heat. The result is that the deposit retains the heat imparted to it during the power stroke, and serves to ignite the new charge of inflammable gas on the following compression stroke. The result is that the ignition of the gas and consequent high explosive pressure occurs while the piston is on the up-stroke, the effect being that the force of the explosion tends to suddenly stop the engine and reverse its direction of rotation. The inertia of the flywheel and momentum of the vehicle are generally sufficient to prevent this reversal, with the result that all of the power transmitting parts of the engine and vehicle are subjected to undue strains. The continuance of severe pre-ignition will in a short time cause the bearings of the connecting rod and generally the crank shaft bearings to fail. Carbon deposits are the cause of greater wear of the working parts of the engine than appears at first thought. It is but necessary to filter the oil drawn from the crank case of a motor, which has been in operation but a short time and analyze and closely examine the substance extracted from the oil by the filter paper. It will be found to be mostly granular carbon that has worked past the piston rings and found its way into the oil in the crankcase. As this foreign material reaches the working parts of the motor in the oil it is obvious that it must cause undue wear."

Mr. Anglada states that denatured alcohol gave surprising results in cleansing several automobile motors of carbon. When the affected parts were soaked with the fluid for several hours the carbon deposits (previously so flinty that they could hardly be chipped off) were found to be in the form of a black paste. The bulk of this could be removed with a small stick and the part then wiped clean. Running the motor completed the cleansing operation, and the combustion chamber and valve parts were found to be entirely free from carbon after a short trip following the denatured alcohol treatment.

NELSON MOULTON, of Portland, Me., who recently rode his motorcycle from his home to Los Angeles, Cal., covered the entire distance in 27 days.

Pleasant Tours in the Delaware River Country

Road Surfaces Are Not Always Ideal But They Strike a Satisfactory Average and the Scenic Inducements Offset All Ordinary Annoyances—How Main Routes Cross the River.

MANY POINTS OF HISTORICAL INTEREST FOR TOURISTS

First-Hand Information Covering Most Attractive Lines of Travel Along and Across the Delaware and Some General Pointers.

By Robert Bruce

OF the very large number of motorcycle tourists who make the interesting trip from Kingston, Saugerties or Catskill across the Catskill Mountains by the two main routes between the Hudson and Susquehanna valleys of New York State—for Cooperstown, Richfield Springs, Oneonta, Unadilla or beyond—possibly few more than merely notice the modest streams crossed in passing through the small mountain villages of Stamford (on the upper route), or Margaretville and Delhi (on the lower route). They look just like a thousand-and-one other streams and crossings that are characteristic of that locality; probably not one stranger in a hundred—unless he had studied the map with more than the usual care—would be able offhand to correctly name or otherwise identify them.

Any suggestion that these might be the two upper tributaries of the Delaware River would frequently be received with doubt or surprise; and yet such is the case, for the headwaters of the west branch of that river are still farther north, in or near Lake Utsayantha, about 1½ miles above Stamford village. The headwaters of the East Branch are in the recesses of the mountains well above Margaretville; but that is the first place where the traveler between the Kingston section and Oneonta or Unadilla will see anything of it.

But from either Stamford or Margaretville south to the lower end of Delaware Bay, no east-and-west trip can be made without crossing that river or its tributaries at least once. The map on the next page will exemplify that fact more clearly than any amount of descriptive text; and from the road-users' standpoint interest may be added by giving in connection with that diagram the nature of the various crossings.

HOW THE CROSSINGS ARE MADE.

On the East Branch and the West Branch in New York State these crossings are all bridges; also (reading from north to south) at Port Jervis, Milford and Dingman's Ferry. There is no direct connection across the river at Delaware Water Gap, but a covered bridge spans it at Portland; at Myers Ferry is the old ferry which gives its name to the place, and is in fact still the principal connection for road travel from New York, Newark and Morristown to the "Gap" or beyond. Easton, Pa., and Phillipsburg, N. J., are connected by a large and important bridge, which is in keeping with the trunk-line highway that makes so great use of it.

There are several smaller bridges on the way to Trenton, not much used by motorcyclists on account of the poor road along the Delaware below Easton; but at Trenton is the most important one of all, as it carries most of the travel between New York and Philadelphia. Here is also the last bridge, for the river road grows wider; but there are three ferries much used by road travel: (1) Bristol, Pa., to Burlington, N. J.; (2) Camden, N. J., to Philadelphia, and (3) Penns Grove, N. J., to Wilmington, Del. Of course the most important of these is the one between Philadelphia and Camden, which carries across the heavy road travel from the Quaker City to Atlantic City, Cape May and the entire south Jersey peninsula.

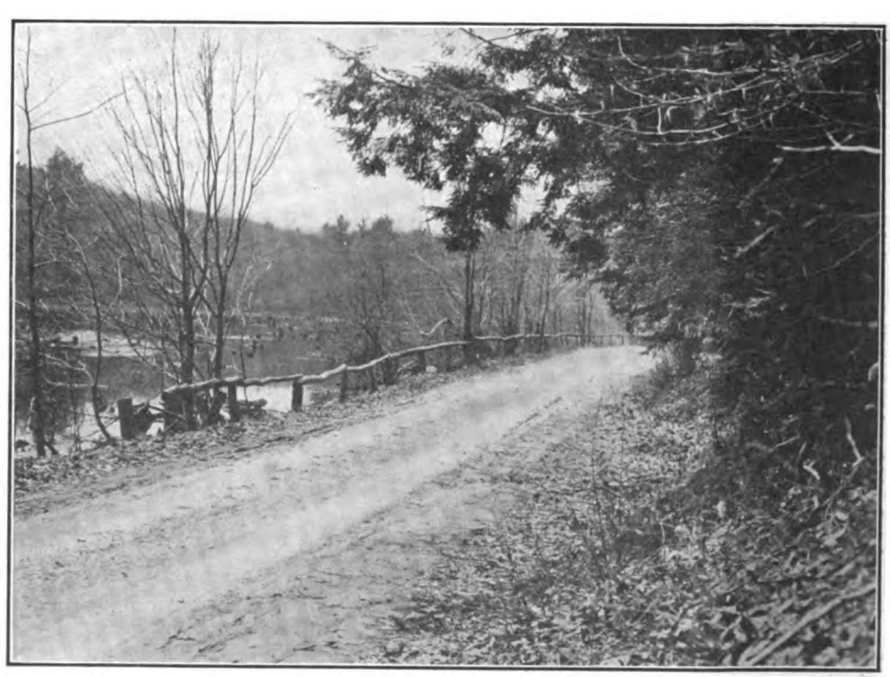
However, the Delaware gradually loses the character of a fugitive mountain stream, gathering force and volume and gaining in importance as its waters sweep past Port Jervis, Milford, Bushkill, Easton, Trenton and Bristol to Philadelphia and Camden. Here for a few minutes it floats a marine commerce suggesting that of New York Harbor, then edges a quieter way past Gloucester, Chester and Wilmington, passing with majesty out to the sea through Delaware Bay. In their course these waters have passed through some of the best farming country in central and southern New York; and over them, by bridge or ferry, passes a considerable proportion of the travel and commerce between the Atlantic seaboard and the Central West.

A DISTRICT OF HISTORICAL INTEREST.

From an historical standpoint it is no less interesting, for the Delaware rises in the country of the Six Nations, whose legends are unsurpassed; lower down it floats through an important interstate section over which the Continentals and Redcoats fought for the possession of a continent. By crossing its chilly waters by night and winning the Battle of Trenton, Washington turned the tide of the Revolution, and clinched the independence that seemed just then to be slipping away. Later on when called to assume the first presidency, the "Father of His Country" crossed the Delaware under happier auspices, and passed under the "Triumphal Arch" erected in his honor. Nor is this all—but space forbids.

The Susquehanna is larger and will average wider than the Delaware, but naturally more road travelers are acquainted with the latter. For fully two-thirds of its entire length, it is the physical boundary between four important states (the "Empire Group"), first separating New York from Pennsylvania, then Pennsylvania from New Jersey, and lastly New Jersey from Delaware. At one point the tourist may spend parts of three consecutive minutes in each one of three states, as a glance at the vicinity of Port Jervis on any accurate map will show. The Port Jervis diagram accompanying this article will bring out this point even more sharply.

To do this it would only be necessary to mark one's time in crossing the long steel toll-bridge over the Delaware River from Matamoras, Pa., into Port Jervis, N. Y., turning right on Front street, and then running nearly



A Picturesque But Little-traveled Stretch of Road Along the East Branch of the Delaware River Near the New York-Pennsylvania State Line.

Digitized by Google

Along the Headwaters of the Delaware

straight ahead along the Erie R. R. tracks into Jersey avenue. A right turn on Main street, followed by a short left turn across the Neversink River, and almost immediately right—back toward the Delaware again—will cross the line from New York State into New Jersey, all within the radius of a mile from the center of Port Jervis. In this vicinity will be found the famous "Tri-States" rock.

GREAT VARIETY IN ROADS.

The winding, diagonal course of the Delaware, through probably more than 300 miles of beautiful, but rough, sparsely settled and largely unsubdued country, accounts in a large measure for the lack of a comprehensive road system to serve the important district it traverses. No doubt the fact that the laws, policies and methods of four different states are involved, accounts in part for this; but it is a peculiar circumstance that certain sections traversed by the Delaware have some of the most heavily traveled roads in the United States, while on stretches of the same river scarcely fifty miles away, a motorcycle has hard work to get through, and the automobile road books specially advise motor car owners to keep away from that section.

Up in New York State the country traversed by the Delaware is about midway between the Hudson and Susquehanna, and is traveled in practically every direction; but from Deposit and Hancock down to Port Jervis it has very little through touring. While the scenery is exquisite, and there is occasionally a good wide stretch of road, no trunk line has been built alongside in New York State; and on the other side is a wild, thinly settled and seldom traveled section in Pennsylvania. Then at Port Jervis there is a complete change.

From a short distance out of Matamoras, along the west side of the Delaware to the vicinity of Bushkill, the majestic river is bordered by a natural shale road, which experts agree is about the finest in the entire country. It is clean, smooth and a trifle springy without being slippery—practically dustless, and far outwears the best common gravel or macadam. Here also the shale is nearest and cheapest, for it needs only to be shoveled out of the inexhaustible banks by the roadside and spread evenly in the path of travel to begin its long and nearly perfect service.

The strategic location of the road, and the deserved fame of this 30-odd miles, is so great that all summer long and until late in the fall, one heavy stream of travel from Delaware Water Gap and below comes up through Shawnee to merge with the other stream of travel from Stroudsburg and points beyond through Marshall Creek, the two joining a short distance below Bushkill. Between that quaint little village and Port Jervis, on a summer day or evening, the combined up-and-down travel almost fills the road, now close alongside, now farther away from the river. Except for the perfect surface and almost dustless roadway, there would certainly be more accidents; for, as many of our readers will recall, at least a half dozen of the most treacherous curves imaginable are half-hidden in what may seem, only a short distance away, perfectly safe and normal stretches.

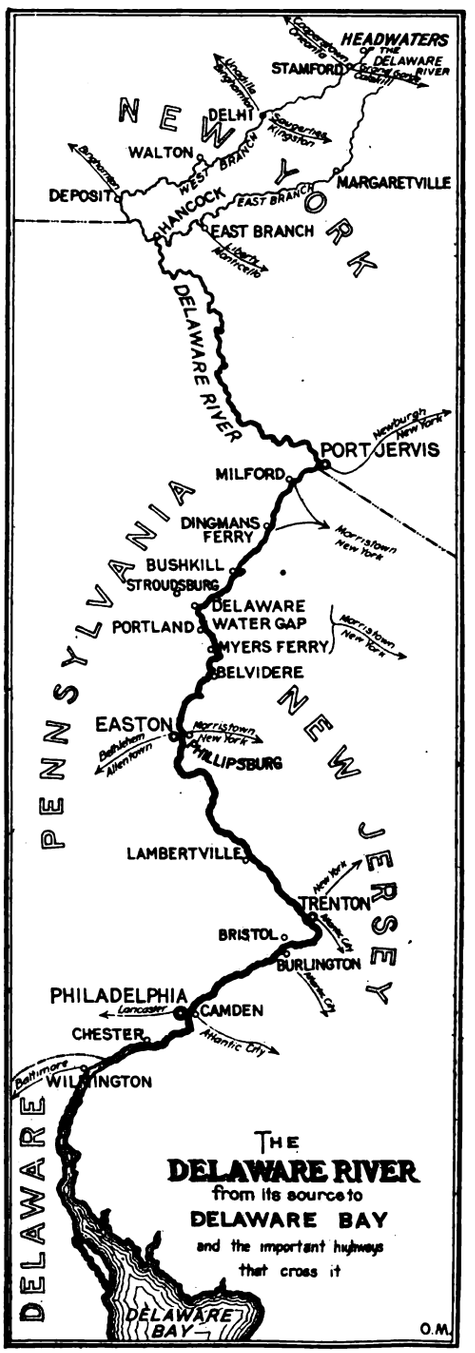
BETWEEN PORT JERVIS AND HANCOCK.

By way of contrast the roads along that part of the Delaware River between Port Jervis and Hancock or Deposit, N. Y., are comparatively deserted by tourists; of course, a considerable number of motorcycles and automobiles are owned along the line, but there is relatively little through travel. In reality, however, this is an integral part of what ought to be the shortest and most natural way from New York and northern New Jersey to Binghamton and the west. Nature was equally prodigal with scenery along the upper line, but less generous with shale, and road improvement in this section is hardly under way; so most travel either turns northeast to the Hudson Valley and goes to Binghamton over the Catskills, or else trends almost as much southwest to Stroudsburg and then up through Scranton or Wilkes-Barre, in either case at a great loss in mileage.

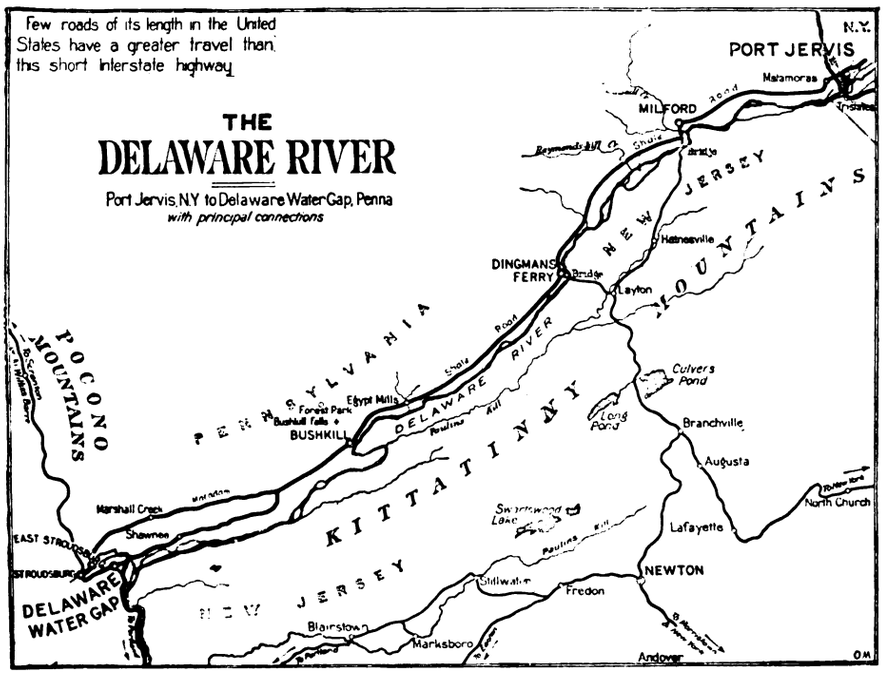
Both of these present alternatives will practically cease to exist just as soon as a good road is built from Port Jervis to Hancock or Deposit. Until then, however, the immense tide of road travel from New York, Newark, Suffern, Tuxedo, Newburgh, Goshen, Middletown, etc., will continue to touch the Delaware River at Port Jervis, going down the shale highway through Milford and Dingman's Ferry to Bushkill, dividing just below there for Delaware Water Gap and beyond, or for Stroudsburg and beyond. Corresponding travel will come up to Port Jervis, and either turn sharply to the right for Middletown, Goshen, Tuxedo, Suffern, New York, Newburgh, Newark, etc., or else keep a more northerly course to the Wallkill Valley and Kingston—in each case turning carefully away from that same part of the Delaware above Port Jervis.

The roads along the river between Delaware Water Gap and Easton, and also between Delaware Water Gap and Myers Ferry (on the Morristown-New York line), are a combination of good and bad—leaning more heavily toward the "bad" by latest reports. This is principally the fault of Pennsylvania, which state has made no adequate progress in meeting the good roads system which New Jersey is gradually bringing nearer to the Delaware. Below Easton splendid oiled macadam extends about 12 miles—to the point where the Trenton road turns left with the course of the river, leaving the Doylestown-Philadelphia short line.

For the remaining 22½ miles to Lambertville, the road along this superb stretch of river is the crowning disgrace to the Keystone State; the only highway is very narrow—it is almost impossible to pass a man afoot—rough and stony as the worst stretches across the Alleghenies, and absolutely unfit for contact with a rubber-tired vehicle. The two factors which leave it simply tolerable are the fine scenery and the absence of bothersome grades. New Jersey is absolved from blame for this stretch, except as that state might sooner or later be expected to shame Pennsylvania by building a new line on its own side of the river to connect Trenton, the state capital, with Easton and Delaware Water Gap by a good, fairly direct road, along what should be



Digitized by Google



one of the best natural highways of the United States. The first of these two states to do this will secure an advantage which the other can never take away; and every year's delay means a loss that can never be made up by either of them.

TRAVEL INTO PENNSYLVANIA.

A considerable proportion of the road travel that crosses the Delaware in the Water Gap district does so in order to reach the Poconos, or on through trips to Scranton, Wilkes-Barre and beyond. You begin to climb from the river's edge and shortly come to Stroudsburg, from which point there is a choice of two main roads through these scattered Pennsylvania highlands, the choice of which depends principally on whether the destination is some point on the Scranton line or the Wilkes-Barre line. Roads are a combination of good and poor either way; in extremely dry weather they are apt to be dusty, but ordinarily cool, and as comfortable traveling as can be expected of rough country in a state where waterbars are an established institution.

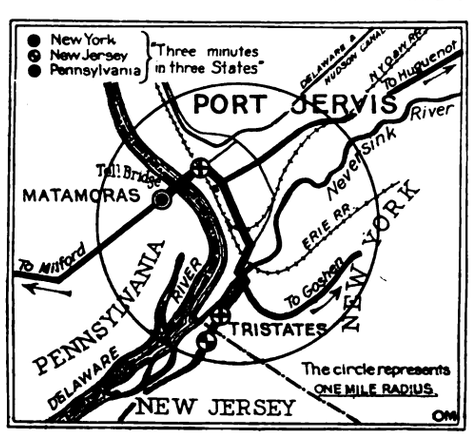
For Swiftwater, Pocono Summit station, Naomi Pines, Pocono Manor and the summer cottages in the vicinity of Pocono Lake and Long Pond, the usual way is from Delaware Water Gap through Stroudsburg, and up past Bartonsville, Tannersville and Scott Run to Swiftwater, where an iron bridge is crossed and a left-hand road taken up a long grade, affording some exquisite views of the surrounding country. The rough going most of the way from Stroudsburg to Swiftwater is now compensated for by a fine stretch of macadam, which not only extends for more than 14 miles on the way to Wilkes-Barre, but has numerous branches to nearby localities.

In starting for points on the Scranton line, one may leave Stroudsburg as if going to Wilkes-Barre—taking the right-hand road after crossing the bridge at Swiftwater, but within the last year or so, more travel has preferred the Paradise Valley, a slightly longer but very interesting and picturesque way. This road goes nearly north from Stroudsburg, running through Analomink, Henryville and Paradise (for Paradise Falls or for Cresco), gradually bearing left to Mt. Pocono. Unfortunately, there is a long stretch of very rough and uncomfortable road between Tobyhanna and Elmhurst, which discourages many trips from the Water Gap through to Scranton; so a large percentage of week-end trips turns back from the Poconos, usually reaching Morristown, Newark or New York City by some other route than the one taken outbound.

NORTHERN OR TRANS-CATSKILL LINE.

Stamford, N. Y., is the most northerly village on the Delaware River, and, as mentioned in the opening paragraph, it is on the through line from the Hudson River at Catskill across the Catskills to the Susquehanna Valley. It is a locality of fair-to-good roads, fine summer homes and superior hotels, the principal one of which, the Rexmere, is situated by the side of a pretty lake near the main road out of the village toward the west. In the town, Churchill Hall and the Hotel Hamilton provide good accommodations; they are under the same management, and at least one is open throughout the year.

The route across the Catskills from Kingston or Saugerties to Unadilla and Binghamton crosses the east branch of the Delaware



An Unique Geographic Situation—"Three Minutes in Three States."

at Margaretville and the west branch at Delhi. There are good accommodations on this line, including the Grand Hotel at Highmount Station; Margaretville and Delhi are pleasant Delaware River towns, but they are not resorts like Delaware Water Gap and Milford farther down. It is rather a land "flowing with milk and honey"—interesting to tour through, or pleasant to rest in.

ORANGE COUNTY-SULLIVAN COUNTY LINES.

The lower west side of the Hudson River—New York to Newburg inclusive—and the interior towns of Orange County, Chester, Goshen, Middletown, etc., have first-class trunk line highways in practically every direction save one—northwest toward the upper Delaware River. From Newburgh the Cochecton turnpike extends nearly direct west through Montgomery and Bullville, coming to the Sullivan County line at the Shawangunk Kill, while from Middletown a nearly direct road comes up through Fair Oaks to a junction with the Cochecton turnpike at the same county line. Travel from both directions then continues directly west through Bloomingburg and Wurtsboro to Bridgeville and Monticello, 125 miles from Middletown and approximately 15 miles farther from Newburgh. Less than 20 miles farther, as the crow flies, is the east bank of the Delaware River; and this should be the trunk line highway from most of the lower west side of the Hudson to Binghamton and the west, if the middle portion of it were improved.

A comparison of distances will show at once the economic importance of making a good road this way, especially taking into consideration that rail distances will usually average about 5 per cent. less than road distances. From New York to Middletown, Monticello, Liberty, Deposit, Windsor and Binghamton, is a total of only about 186 road miles, and this could be shortened several miles by running the line from Monticello to the Delaware River and then up to Deposit, without going through Liberty. The corresponding distance from New York to Binghamton by the Lackawanna Railroad (through Scranton) is 207 miles, and by the Erie (through Paterson Middletown and Port Jervis), 215 miles.

It is doubtful if more or greater obstacles would be encountered in building a first-class road this way than were overcome in constructing the new State Boulevard from Haverstraw to the Rockland County-Orange County line on the west side of the Hudson, and its economic value would be far greater. To go through Poughkeepsie and Albany on the way to Chicago is justified only on the score of the present unscientific road conditions, for every mile traveled over Newburgh is a mile out of the way. That city and Sandusky, Ohio, are in almost the same latitude, and the Newburgh-Albany distance must be offset—gradually but no less surely—by the southwest direction of road travel from Buffalo, around the south shore of Lake Erie to Erie, Cleveland and Sandusky. It is almost impossible to lay out a correct New York-Chicago highway without figuring on the improvement of the Delaware River line as a part of it, and their long neglect of these stretches is no credit to the foresight of the immediately interested states.

WATER GAP-MILFORD-PORT JERVIS ROUTES.

It is in this district that the Delaware River becomes of first importance to motorcyclists, on account of the fine road along the Penn-

A Sunday Morning Round-up of Indian Enthusiasts in Sayre, Oklahoma.

sylvania side, its accessibility from many directions, the variety and beauty of the surrounding country, and the ample accommodations in the several towns. Delaware Water Gap, Bushkill, Dingman's Ferry and Milford are all on the west side of the valley within an average of 30 miles from the good roads system of northern New Jersey, and while the actual approaches to the river are not as good as they ought to be, this handicap is usually forgotten when once on the other side.

From New York, Newark and the surrounding territory, the usual route to Delaware Water Gap is through Morristown and Chester to German Valley, where a right turn is made to go up over Schooley's Mountain, the surface of which has been materially improved during the last year or so, especially on the eastern face, though it is still a stiff climb. You descend the "Mountain" and come quickly into Hackettstown, taking the left-hand road at the American House and following the main line of travel through several small towns to the Delaware River, crossing at Myers Ferry. The "ferry"—which seems not to have changed within the memory of living men—is an old-fashioned flat-boat, attached by cable to a stout wire stretched across the river, but it safely carries a large number of tourists year after year. It occupies the most natural crossing, and will probably continue to use that advantage for a long time to come, as a bridge at that point for road travel alone would probably not pay.

The balance of the way is on the Pennsylvania side through Portland, gradually coming up into the Gap along the river's edge, over a road that has been greatly improved by the building of a long concrete wall to guard the rather heavy travel at what were formerly a number of danger points. One fine view succeeds another, until finally the Gap itself is seen immediately ahead; it is impossible in so brief space to describe this locality, where a day or two may well be spent in exploration and discovery. In approaching the Gap from the Portland Road, one first passes the Kittatinny Hotel (on the right near the river), gradually turning left toward the village on the road which comes up from the D. L. & W. R. R. station.

WHERE A FINE MEAL MAY BE HAD.

Just beyond—on the left—is the road which leads up the rather steep grade to the Water Gap House, whose accommodations are first-class. Occasionally strangers hesitate to make the climb, but it is short and not as steep as sometimes thought, while the view from the top is worth it. On the main road just beyond the bridge over Cherry Creek, the Glenwood may be seen over to the left; and nearly opposite on the right starts the road to Shawnee, which runs into the Delaware Valley route, approximately 7½ miles from the Gap.

Next on the string of resort villages is Bushkill, where at "Germond's"—a comfortable but unpretentious country house, run by a real French chef of long experience—you will sit down to a meal that you will probably agree could hardly be better, with a brook of rare beauty within sight and hearing. The only trouble about dining at Germond's is that about the time you expect to be through he sends in something else that looks too good to let pass by—and he will keep it up until you flee. It is a distinct contrast to some places known to tired and hungry motorcyclists, and the worldly-wise will keep a lookout for the sign on the left-hand side of the main road just before coming into Bushkill Village from the Water Gap.

When you come to the incidental pleasure of paying the bill, you will be surprised to find out how reasonable the charge is, and you will soon be looking for a reasonable excuse to go that way again. SPECIAL CAUTION (as the road book might say)—like various other Frenchmen, Monsieur Germond is a late riser, and it will not be worth while to start out early from somewhere else, planning to make the "Rendezvous" for breakfast. Even 10 a. m. is "early" here.

A little farther along (immediately after crossing the railroad at Bushkill station), a left-hand road leads up to Forest Park Hotel and cottages, situated in a private forest reserve of 2,000 acres on Forest Lake and Lake Tamient at an elevation of 1,600 feet. It is a somewhat long and hilly ride to Forest Park, but once up you are in what is often called the "Adirondacks of Pennsylvania." Several smaller hotels are scattered along this portion of the main road, and at the next town—Dingman's Ferry—the High Falls House, situated on the left-hand side of the main highway, probably has the best accommodations. At Dingman's one road starts nearly west to the private park of the Blooming Grove Club, whose members are mostly business or professional men of the large eastern cities, and another road crosses the river, ascending a very steep hill, and making a short route to Newton, Lake Hopatcong, Morristown and New York. The Hotel Schanno is one of the better class of road-houses on the way from Dingman's Ferry to Milford, and makes a specialty of serving meals to tourists.

WHEN THE SCENERY IS AT ITS BEST.

Milford, the largest town in this vicinity, is another way to the Blooming Grove Club, and it also has a connecting road across the Delaware to northern New Jersey. It is a curious fact that Milford has no railroad, and its principal regular connection with the outside world is by a stage line to and from Port Jervis. There must be a dozen hotels, of which the Bluff House is located upon the river, while the Fauchere and Milford Inn and Marguerite are all within a short distance of the town center; the scenery along this part of the river is unsurpassed by that of any other portion of the Delaware.

The main road from Delaware Water Gap to Port Jervis makes two right-angle turns in Milford, and then swings up the valley again, taking the right-hand road at "Pocono Farm," entering the small village of Matamoras, the last place in Pennsylvania. Immediately across the iron toll-bridge from Matamoras is Port Jervis, N. Y., the terminus of the fine river road from Delaware Water Gap, and likewise at the western edge of the

A Critical Moment in the Feature Event at Recent Successful Speedfest in Seattle, Wash. All the Races Were Hotly Contested.

NORTHWEST HAS FAST RACES

SEATTLE, WASH.—Three thousand spectators at "The Meadows" recently agreed that the first motorcycle meet of note in the Northwest was successful from every viewpoint. Jimmy Bergstadt was the favorite of the crowd. He is only 16 years old and is one of the youngest riders on the coast. Riding against champions, the little fellow took two seconds on a Thor single. Summaries:

Five-miles, private owners. Fred Mercer, Merkel; Bergstadt, Thor, and Zwick, Merkel. Time, 5:45½.

Five-miles, trade riders. Mercer, Merkel; Bergstadt, Thor; Zwick, Merkel. Time, 5:36. Young Bergstadt pushed the winner closely.

Ten-miles, flying start. Godfrey, Excelsior; Berrith, Excelsior, and Zwick, Merkel. Time, 9:55.

Twenty-mile for Portus Baxter trophy, Zwick, Merkel; Godfrey, Excelsior, and Berrith, Excelsior. Time, 19:52½.

The races on June 1 were not as well attended but were equally interesting. Young Berreth was easily the favorite of the crowd. He was leading the field in the Portus Baxter Trophy race when he spilled and broke his handlebar, putting him out of the going. Summaries:

Five miles, for 4 h. machines, standing start—Bergstadt, Thor; Mercer, Excelsior; White, Excelsior. Time, 5:34.

Five miles, for 7 h. machines, flying start—Cogburn, Excelsior; Pettit, Indian; Godfrey, Excelsior. Time, 5:03.

Seven miles, for 4 h. machines, flying start—Bergstadt, Thor; Mercer, Excelsior; Keller, Indian. Time, 7:37½.

Four miles, for 7 h. machines, flying start—Berreth, Merkel; Godfrey, Excelsior; Pettit, Indian. Time, 4:00½.

Twenty-five miles for Portus Baxter Trophy, free-for-all—Cogburn, Excelsior; Pettit, Indian; Godfrey, Excelsior. Time, 25:15. Best mile by Berreth in 59 seconds.

Pointers for Keeping Leggings at Their Best

Tommy Dedge Makes a Plea for More Neatness in Leg Coverings and Tells How Different Styles May be Treated to Prolong Their Life and Improve Appearances—Formulae for Cleaning.

FEW motorcyclists give more than passing attention to their leggings and as a result find that they wear out quickly and present anything but a pleasant appearance while they last. Tommy Dedge, the well-known Washington (D. C.) speedster, calls attention to this fact and offers the following suggestions for the rider who is interested in keeping his leg coverings at their best.

Says Tommy: "A strong solution of common washing soda (lukewarm) will stiffen the leather of leggings and also take out the surplus oil that has been thrown on them from the motor. A sponge may be used to best advantage to apply the solution. The leggings should be thoroughly covered with the soda solution and rolled up, but not too tightly. Care must be exercised to avoid denting in the sides of the leggings with the straps, as such dents will not add to the appearance of the leggings when they are dry. When they are perfectly dry they will be found to have resumed their original shape and they may then be blacked or treated with tan dressing, as the case may be.

"To clean tan leather leggings get a five-cent portion of oxalic acid, dissolve in a pint of water and use a sponge for the rubbing. When the leggings are clean they should be rolled and allowed to dry thoroughly. When they are ready for polishing it is necessary to rub off all the dry acid which has accumulated on the leather and then apply black or tan polish in the usual way. The oxalic acid should stand for an hour or more to dissolve. Then it needs a good shaking before it is used. All of the acid will not dissolve no matter how hard you work or how long you wait. To blacken tan leggings, clean thoroughly as directed above with oxalic acid, rub off all dry powder and apply a dye. The best I have used is sold under the name of 'Electric Dye' and is made, I believe, in Philadelphia. It is unlike other dyes and has a certain amount of oil in it which will help some when the time arrives for polishing.

"When the leggings are dry they must be cleaned of all the blue coating that has accumulated, and in some cases it may be found advisable to apply a second coat of the dye. When the dyeing operation is complete get a can of harness dressing and sponge the leggings well with this solution. Then put on black paste and proceed with the polishing. These directions should be adhered to strictly, as it is a simple matter to make a bad job when the work is done carelessly. I claim that a man's shoes and leggings are very important articles of his riding costume and that they cannot be given too much attention."

A MEXICAN BOOSTER

ONE OF the latest motorcycle boosters to become interested in the F. A. M. is Rafael Calderon, Jr., of Chihuahua, Chih., Mexico. In a recent letter to Chairman Estabrook, of the Membership Committee, Rafael stated that he had opened a motorcycle garage in Chihuahua and expressed a desire to become a member of the F. A. M. He will handle the Harley-Davidson and probably the Henderson. Rafael expects to attend the coming convention at Denver.

A REWARD OFFERED

A REWARD of $25 is offered for information leading to the recovery of a 1913 Harley-Davidson, chain drive. The machine was equipped with Prest-O-Lite tank, two lamps and a horn. The machine number is 2350. Bartlett B. Pennington, 2177 West Fourth street, Cleveland, O., offers the reward.

Close Running Features Secret Time Run

OF a field of thirty-one, nine professionals and twenty-two amateurs, all but four finished in the secret time trial of the Atlantic City (N. J.) M. C., held on May 25. The run was witnessed by a big throng distributed all along the route, and is considered the most successful event ever held by the club. The 150 miles included three laps through the county, and the entire distance was covered without an accident. The amateurs, four of whom did not finish, started at 10 a. m., and the professionals were sent off at 10:10 a. m.

The official time proved to be 5:1:58, and some of the riders managed to keep very close to the secret schedule. The finishes are reported as follows: Amateurs.—W. Fritz, 7 Indian, 5:11; J. Patroni, 7 Indian, 5:11:15; W. K. Smith, 7 Pope, 5:13:22; B. D. Edwards, 7 Thor, 5:15:30; H. F. Carnell, 7 Excelsior, 5:19:58; R. H. Bowen, 7 Excelsior, 5:20:30; W. H. Hardin, 6 Merkel, 5:21; G. H. Keffer, 7 Indian, 5:21:45; J. L. Greenley, 7 Harley-Davidson, 5:24:30; E. Apel, 4 Harley-Davidson, 5:25:20; A. A. Blomfeldt, 7 Thor, 5:27:25; H. Miller, 7 Harley-Davidson, 5:29:46; A. Adler, 4 Thor, 5:30:32; D. C. Freas, 7 Thor, 5:31:30; H. A. Hirsch, 7 Indian, 5:31:33; H. C Stockinger, 7 Indian, 5:31:45; H. Arthur, 7 Indian, 5:37:20.

Professionals.—A. Smith, 7 Pope, 5:13:12; R. Blackeley, 7 Harley-Davidson, 5:22; C. A. Van Doran, 7 Merkel, 5:22:50; W. F. Specht, 7 Harley-Davidson, 5:30:45; W. H. Camp, 5 C. V. Stahl, 5:31; T. J. Newman, 7 Thor, 5:31:15; F. P. Gravatt, 7 Pope, 5:33:20; G. R. Armstrong, 7 Indian, 5:48:10; W. Shannon, 6 Excelsior, 5:55:50.

A PLEA FOR CO-OPERATION

OFFICIALS and members of the Atlantic City (N. J.) Motorcycle Club are confronted with a serious situation which can be remedied only by the co-operation of visiting riders. The club is endeavoring to have its members observe the traffic laws of the city and state, and its efforts have been rewarded in that the members strictly adhere to all the regulations. However, Atlantic City attracts numerous motorcycle visitors, many of whom show a total disregard for speed, muffler and other regulations. Vehicles are required to stop when approaching trolleys discharging or taking on passengers, but few if any of the visiting tourists observe this ordinance. Not only do the violators bring trouble upon the local boys, but they also submit themselves to severe fines. The department of public safety is at a loss as to how best to cope with the rapidly increasing motor traffic and the fines imposed upon violators are by no means moderate.

Aside from the trouble experienced in this way the Atlantic City club is making splendid headway. President William N. E. Shannon is one of the most enthusiastic riders in Southern New Jersey and has probably done more than any other person for the advancement of the sport in that section.

COHASSET BEACH MEET

IN THE motorcycle race meet held at Cohasset Beach on Sunday, May 25, under the auspices of the Aberdeen (Wash.) M. C., Ed. French lowered the Cohasset Beach 50-mile record and won the championship of Southwestern Washington. French's time was 48:34⅗. Archie Taft, former champion of Washington, dropped out in the ninth lap.

The second race, at 30 miles, was for singles. George French took first place in 37:45. A notable feature of the meet was the fact that both winners were practically new at the racing game. Ed. French, winner of the twin event, is only 17 years old and has been riding just a year; while George French, who won the race for singles, has been riding only a month and is 16 years old.

HOFSTATTER TAKES FEATURE EVENT

FEATURING the race meet of the Indianapolis (Ind.) M. C. on May 29, was the fifty-mile professional race, which was won by Ray Hofstatter. Erwin G. Baker, the Indian record holder, was forced to drop out because of engine trouble, leaving Ray an easy winner. Summaries:

Five miles, stripped stock machines, 61 inches—Mike Kizel, Indian; Minor Ennis, Indian; Jack Carr, Excelsior. Time, 5:36⅗.

Five-mile amateur, 30:50 open—H. Meyers, Indian; Fred Sellers, Indian; Frank Irish, Harley-Davidson. Time, 6:14.

Fifty-mile professional, open, 61 inches—Ray Hofstatter, DeLuxe; Thurman Constable, Harley-Davidson; V. O. Scanling, Indian. Time, 52:14.

Ten-mile amateur, stripped stock machine, 61 inches—Ennis, Indian; Carr, Excelsior; Hiday, Harley-Davidson. Time, 11:03⅗.

Twenty-five-mile professional, stripped stock machines, 61 inches—E. G. Baker, Indian; Carl Gossert, Indian; Ennis, Indian. Time, 27:26.

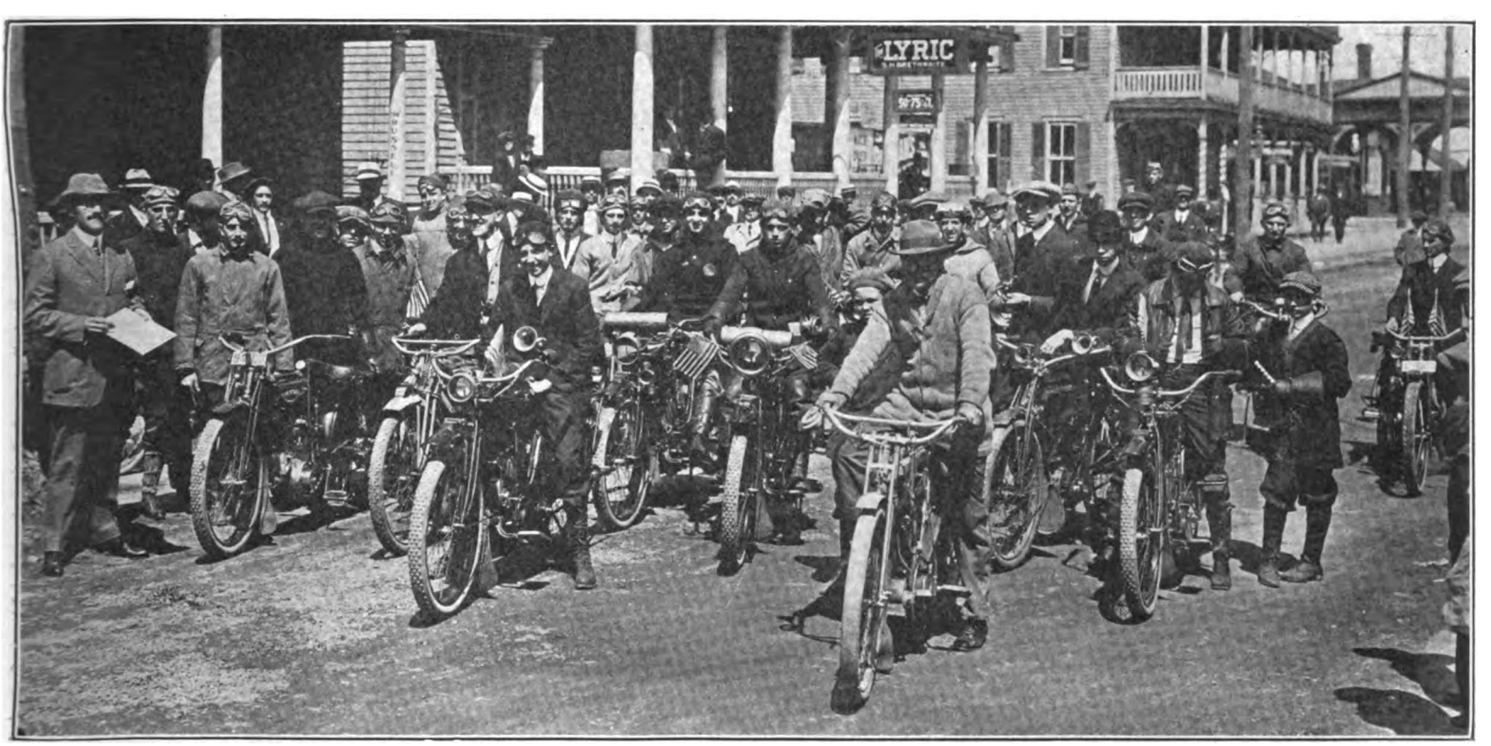
Five-mile match race—Baker, Indian, won from Hofstatter, DeLuxe. Time, 5:15⅗.

One-mile time trial—E. G. Baker, Indian. Time, 54⅗ seconds.

Ten-mile professional, 30:50 inches—Constable, Harley-Davidson; Meyers, Indian. Time, 11:26.

CANADIAN HARMONY

JUST prior to the race meet of the Toronto (Ont.) M. C., on May 24, the club requested a conference with officials of the Canadian Motorcyclists' Association, from which it had previously split off, and an understanding was reached under which the club agreed to conduct its racing program. A permanent settlement was not reached at the time, but there were strong indications that the way had been paved for future harmony. The Toronto M. C. has a large membership and its return to the fold of the Canadian governing body has aroused much favorable comment.



Starting the Amateur Division on the 150-Mile Secret Time Run of the Atlantic City (N. J.) M. C. The Professional Squad Was Much Larger.

Digitized by Google

Fifty-Eight Starters in Maryland M. C. Trial

Out of Big Field That Participated in Two-State Reliability Event Forty-One Riders Finished—Downpour of Rain Transformed Roads into Wallows and Machines Were Subjected to Severe Tests.

THE annual two-state tour of the Maryland M. C., of Baltimore, held May 30, was one of the severest ever made by the squad. Considering the unpropitious conditions an excellent showing was made by the boys. Out of 65 entries, 58 started and 41 finished. Fifteen of the 19 professional starters completed the run, but few reached the final checking station on time.

The professionals were sent away at 6:30 a. m. They started two at a time, at one-minute intervals. The boys had covered about 20 miles when a fine rain began to fall and this gradually became a heavy downpour. About midway between Westminster and Gettysburg it came down in sheets and the roads were soon in frightful condition. Fortunately the boys got over the stretch to Gettysburg in time to avoid running through the red clay of which the road is composed. It did not stop raining entirely until 6 p. m.

Despite these conditions there was not a serious accident, a few bruises being the only injuries reported by the riders. There was little tire trouble and the motors stood the test splendidly. The performances of J. Raymond Ailsworth excited considerable favorable comment. He rode a 1910 Indian, without a clutch, and went over the entire route, finishing a few seconds behind schedule time. The tire car found him five miles out of Chambersburg with both tires flat. A new casing was put on one wheel and an inner tube on the other. When the job was completed he had only six minutes to make the control. Ailsworth was off like a shot and when the tire car pulled into Chambersburg the checker said that Ailsworth was on time. How he made the distance, over a mountain road, has all the boys guessing. There was one lady on the run, Mrs. Clark, who rode tandem with her husband, Robert L. Clark. After several spills Mr. Clark decided to discontinue the run at Newmarket, 35 miles from the finish.

After spending several days figuring up the tally sheets of the checkers the officials announced that there were fifteen perfect score men in the professional class and 24 among the amateurs. Each contestant had leeway of three minutes both ways at each checking station and if inside those limits a perfect score was given. In case more than one came in on time a penalty was arranged so that their proper places could be given in the final list. For every minute ahead two points were deducted and for each minute late, one point was taken off. There being four perfect scores in the professional class this system had to be resorted to in order to give them their relative positions. The scores follow:

Professional class—George Gephardt, 7 Indian, 1,000, penalty 2½; Carey Mears, 7 Indian, 1,000, penalty 3 points; R. H. Merryman, 9 Dayton, 1,000, penalty 6½; J. A. Robinson, 9 Dayton, 1,000, penalty 8½; D. W. Briggs, 7 Reading-Standard, 996½; Raymond Rockford, 7 Indian, 996; Bert E. Heinz, 7 Harley-Davidson, 990¼; Chester Harden, 7 Harley-Davidson, 988½; George Osborne, 9 Dayton, 981¾; C. E. Sandruck, 7 Excelsior, 979¾; James Basilicata, 7 Excelsior, 968¾; Edward A. Allard, 7 Yale, 967; Alfred Clark, 8 Henderson, 946½; Frank Schuneit, 7 Harley-Davidson, 937¾; Gus W. Heinz, 7 Harley-Davidson, 875.

Amateur class—Frank O. Boyd, 7 Indian, 1,000, penalty 5½; John Booth, 6½ Excelsior, 997½; Elmer Snyder, 6½ Excelsior, 99½; Clarence Rappold, 7 Yale, 994; Nelson Johnson, 7 Indian, 989; L. Von Ziegenhahn, 7 Indian, 988¼; J. R. Ailsworth, 4 Indian, 986; DeWitt Kemp, 7 Indian, 983; R. C. Challoner, 9 Dayton, 982¼; E. C. Burness, 7 Indian, 976¼; I. Ellis Behrman, 7 Harley-Davidson, 974½; F. E. Rasmers, 7 Indian, 968; W. F. McCauley, 5 Harley-Davidson, 962¼; Charles J. Doeller, 7 Indian, 960¾; A. F. Patzsche, 7 Indian, 960½; Charles P. Frank, 7 Harley-Davidson, 959; Andrew Gephardt, 7 Indian, 952½; Otto Doebereiner, 7 Excelsior, 947½; A. Lehman, 4 Indian, 947; Arthur C. Boehm, 4 Iver Johnson, 927½; William G. Horn, 7 Reading-Standard, 927; Frank Fertita, 4 Yale, 890¼; H. G. Morgan, 7 Thor, 890; Herman Schmidt, 7 Harley-Davidson, 868.

Among the starters who failed to finish were: Dr. J. Fred Lautenbach, Indian 7; Robert Lee Clark, Indian 7; Henry H. Hickman, Henderson 7; Arthur E. Miller, Indian 7; Sam Ambach, Indian 7; Henry Schlegal, Indian 7; Harry C. Hughes, Indian 7; Marion L. Brown, Indian 7; W. B. Mayo, Harley-Davidson 4; Theodore Falkenhahn, Merkel 7; Edward J. Wunder, Indian 4; Sidney J. Goldenburg, Indian 7; George Houser, Dayton 9; James M. Hepbron, Pope 4.

Howard A. French was chairman of the run committee and the other members were: Nelson Johnson, Elmer Snyder, W. Scott Staniford, Roger Wilkins and James Basilicata. The run officials were: William Wood, Frederick Shaffer and J. Early Codd, Baltimore; O. W. Hess, Westminster; George W. Buohl, Gettysburg; M. H. Rehrig, Chambersburg; Samuel B. Haines, Hagerstown; Murray Brish, Frederick.

PATTERSON'S SUGGESTION

F. A. M. President Recommends That Protecting Overhang on Board Tracks Be Higher Than at Present.

IN a recent letter dealing with the problem of safeguarding spectators and racers at board tracks President Patterson, of the F. A. M., refers to the overhang construction which is now being used on some of the big bowls and argues that it should be at least eight feet from the top of the incline to the point at which the overhang starts. The overhang is built out at right angles from the fence at the top of the track and is intended to prevent the racing machines from plunging over the fence or hurling their riders among the spectators. As a protective arrangement for the spectators this safeguard is effective, but it has already proved highly dangerous for the speedsters themselves.

On many occasions machines have climbed up on the perpendicular boarding at the top of the track at high speed and have been brought down safely, but with the overhang as constructed on one or two of the bowls it is low enough to strike the rider as soon as he works up off the incline. President Patterson's suggestion that the lowest point of the overhang be placed at least eight feet above the top of the incline would give racers a fighting chance to regain control even after going up on the perpendicular section.

WANDAMERE'S OPENING EVENTS

MORE than 2,500 racing fans gathered at the Wandamere Motordrome, Salt Lake City, at the opening meet held on the evening of May 30. High honors for the evening were carried away by Excelsior machines ridden by J. A. McNeil and Ray Peck. Both the Wandamere Special, the feature event, at eight miles, and the five-mile point race, Class A, were won by riders of these machines. Summaries:

Three-mile match race, Class B: First heat—T. M. Samuelson, R. Rognon, Burt Smalling. Time, 2:18⅗. Second heat—Samuelson, Rognon, Smalling. Time, 2:14⅘. Third heat—Rognon, Smalling, Samuelson. Rogon, 11 points; Samuelson, 10 points; Smalling, 7 points.

Five-mile point race, Class A: First heat—Whittler, McNeil, Peck. Time, 3:58⅗. Second heat—McNeil, Peck, Whittler. Time, 4:22⅖. Third heat—Peck, Ward, McNeil. Time, 3:47⅘. Peck, 10 points. McNeil, 10 points; Whittler, 8 points.

One-mile exhibition, introducing the Henderson—F. E. Whittler. Time, 48⅗ seconds.

Six-mile open, Class B—Samuelson, Rognon, Smalling. Time, 4:41⅗.

Wandemere Special, eight miles—McNeil, Peck. Time, 6:20⅕.

OUR FRIENDS IN THE PHOTOS

ROCHESTER, N. Y., has a 267-pound motorcyclist "Pop" Bowden, who appears astride the Pope twin picture No. 1 on page 43. He is holding a loving cup which was presented to him after a recent outing by the boys in E. W. Fisher's motorcycle headquarters. Fisher is the Pope agent in Rochester. E. W. Smith, Pope traveler in the Rochester territory, is seated at the left in the photograph.

No. 2 shows an imposing line-up of the Seattle (Wash.) police squad, mounting Excelsior machines.

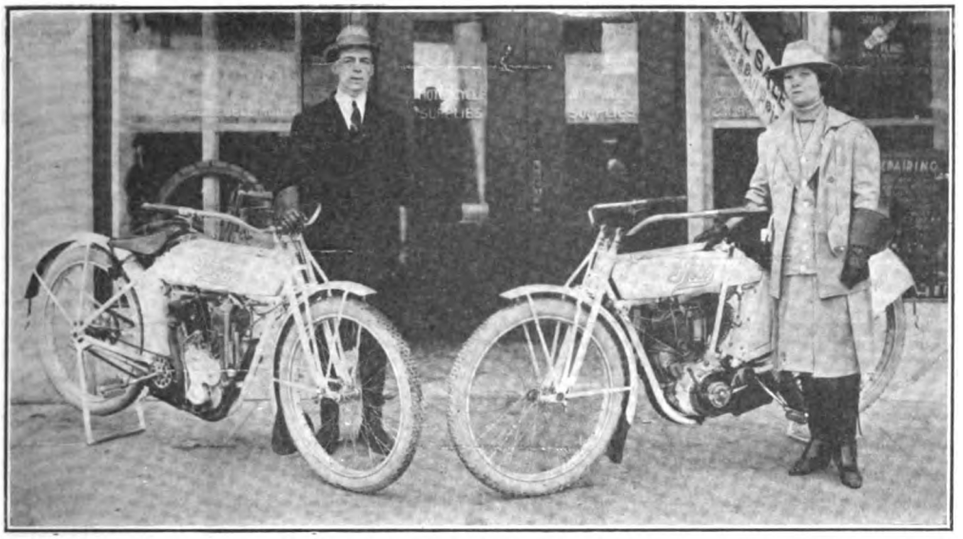
Picture No. 3 shows the Press Car in the Indiana State F. A. M. run held up for tire repairs. The car was sent out by the Goodyear branch in Indianapolis, and its crew was of great assistance to the riders.

The start of the 5-mile professional event at the race meet in Toledo, Ohio, May 25, is shown in picture No. 4. The race went to Cleviston (Thor) in 6 minutes, 20⅘ seconds. No. 5 gives another view of the Toledo races. It shows two of the boys neck and neck coming into the homestretch.

Charles P. Wuler, a Wichita (Kan.) florist, makes excellent use of his Yale single in connection with his business, and picture No. 6 shows him ready for delivery trip.

DURING the past year the Hamilton (Ont.) M. C. has grown so rapidly that it has twice been compelled to move into new quarters. This is due largely to the active membership campaigns conducted by the club.

Digitized by Google



MORTON IS BOOSTING

"BUSY BOB" MORTON, former New York State F. A. M. Commissioner, and a veteran booster in the interest of the Federation, is working night and day to advance the plans that have been mapped out for the first annual convention of Empire State motorcyclists, to be held in Elmira, July 3-5, and is giving special attention to the tours. Two big divisions will travel to the convention city, one from the metropolis and the other from Lockport. Many of the details remain to be worked out and Morton is giving State Commissioner J. A. Hall all the assistance possible in order that the program may be completed without delay. An effort is being made to have a strong showing of tandemites and sidecar users on the tours. A schedule is now being arranged by which clubs all along the touring routes may join the main bodies without confusion. As each club joins it will take charge of the squad and conduct it until the next club falls in line. In this way each club will have an active part in the handling of the tours and will also facilitate travel because of full acquaintance with the roads throughout its district.

HELPING THE CAUSE

THE publicity campaign inaugurated by Frank Long, chairman of the legal action committee of the National Capital Motorcycle Club, of Washington, D. C., is meeting with continued success. Responses are coming in from motorcycle clubs and manufacturers in all parts of the country. The Rockford Motorcycle Club of Rockford, Ill., recently forwarded a check for $5, as did the Fentress-Newton Company, of Chicago. The Davis Sewing Machine Co., of Dayton, Ohio, manufacturers of Dayton motorcycles, forwarded a check for $25, the Emblem Manufacturing Co., of Angola, N. Y., contributed $10 through their local agent, Harry F. Seamark, and the Henderson Motorcycle Co., of Detroit, contributed $10 through their local agents, Osborn & Leishear. Many requests for further information have been received from interested individuals, and the prompt replies which have been forwarded by the chairman of the committee will no doubt bring substantial responses in the near future.

OUT of every two-dollar fee for a motorcycle license in Kansas, it is stated that $1.50 is to be used in the improvement of country roads.

INSPECTORS OBTAIN GOOD SERVICE

SUCH excellent service has been obtained from the two Harley-Davidson motorcycles purchased by the District of Columbia Street Cleaning Department a little more than a month ago that the officials have asked for bids for two more. The machines were used by inspectors, one of whom covered 2,800 miles on a gasoline consumption of 25 gallons, or over 100 miles to a gallon.

A NEW ZEALAND WINNER.

IN A recent tournament of the Manawtu Motorcycle Club, at the Marton Jockey Club course, New Zealand, E. L. P. Hinds, shown above, won both the 10 and 15-mile handicaps from scratch with his 4 h. Indian.

FAIR RIDER CHALLENGES

ONE of the best known feminine riders in Pacific coast territory is Mrs. E. P. Miller who appears in the accompanying photograph with her husband. Mrs. Miller has won a number of medals for endurance work in California and has also established a reputation for crowding her speedometer in competitions. She is out with a sweeping challenge to eastern motorcyclists of the fair sex, and is prepared to compete on almost any terms. Mr. Miller is also well known as a roadster in southern California and has put many a century behind him.

BUSY MARTINSBURG RIDERS

A SIDECAR and tandem run to Harrisonburg., Va., was recently made by several members of the Martinsburg (Va.) M. C. The riders were accompanied by their wives and lady friends. On Decoration Day the club held a run to Hagerstown, Md., but were disappointed as the track at that place would not permit of running the races which had been scheduled. A run to Winchester was made on June 6 to view the Southern Decoration Day celebration, and an endurance trial to Pittsburgh is planned for July 4.

BRIDGES LOST IN OHIO

JAMES R. MARKER, State Highway Commissioner of Columbus, Ohio, has just completed a map which shows the bridges washed away throughout the state during the floods. The map is dotted with black-headed pins, each pin representing a loss of $1,000, and only seven counties escaped loss. These were Adams, Erie, Carroll, Noble, Highland, Vinton and Jackson. The total loss of bridges in the State is estimated at $8,400,000. The greatest loss in any single county was in Franklin, where it reached $787,000. Other large losses were in Montgomery, $699,000; Butler, $565,000, and Hamilton, $550,000.

NEW ENTERPRISE STORE

MEMBERS of the sales and mechanical forces, as well as patrons of the Enterprise Motor & Cycle Co., of Oklahoma City, Okla., are shown in the accompanying picture, which was taken in front of the company's new headquarters. The new store is 37 x 100 and affords ample space for a large salesroom and a repair shop. The Enterprise company handles the Harley-Davidson and has already sold 185 machines this year.

NOVEL DRIVING ARRANGEMENT

DRIVING his Flying Merkel from the sidecar by a special arrangement, W. T. Little, of Akron, Ohio, plans to make a 2,000-mile trip through the East. His route includes Buffalo, Syracuse, Rochester, Albany, Springfield, Mass., Boston, New York City, Washington,

Harrisburg, Pittsburgh and thence back to Akron. Mr. Little and the outfit in which he will make the trip are shown in the accompanying photograph.

CHAPPLE WINS FROM THOMAS

BROOKLYN, N. Y.—Arthur Chapple carried off the honors at the Brighton Beach Motordrome on Decoration Day when he defeated Hartley Thomas, of Philadelphia, in straight heats.

George Sperl was struck by Charles Davis in one of the heats of the five-mile professional race and Sperl was thrown from his machine. He rolled to the bottom of the track, but was unhurt. His machine was wrecked. Another spill was furnished by Franz Krebs, a novice rider, in the last event.

SPILLS AT BRIGHTON

BROOKLYN, N. Y., Saturday, May 31.—A crowd of about 3,000 witnessed the races held at the Brighton Motordrome this evening. A spill featured the novice race when Pete Cronin, Bert Sayer and Bert Miller got tangled up and all three crashed to the bottom of the track. None of the riders was seriously hurt.

The first race of the evening, a four-mile professional race, took three heats to decide the winner, Charlie Davis finally flashing across the line in front.

Cox and Costello pushed Kessler to the limit in the McGraw Sweepstakes. The first heat went to Kessler after an exciting race; the second heat to Costello; Kessler turned the tables in the deciding heat, winning by a narrow margin.

CHAPPLE SCORES AGAIN

BROOKLYN, N. Y.—Last Sunday night's racing at the Brighton Motordrome was productive of close finishes. Arthur Chapple captured the 5-mile handicap after a very exciting race. Chapple rode from scratch, allowing his competitors a lap and a half handicap. Chapple rode at top speed and caught the trailers on the beginning of the second mile and gradually cut down the lead until he was on even terms at the fourth mile. He shot into the lead on the last lap, winning from George Mercier by a few feet in 3:43.

Mercier won two heats of the 5-mile professional race and Hartley Thomas won the third heat. Due to engine trouble, Thomas failed to qualify in the first two heats. Chas. Davis defeated Mike Costello in the 3-mile special match race. The novice race went to Albert Sayers, who finished first in one heat and second in the other two heats.

AN UNUSUAL REPAIR

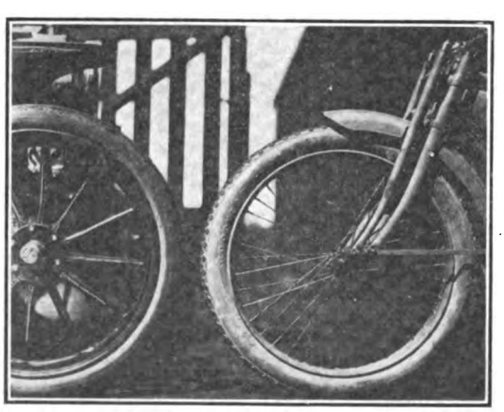
AN UNUSUAL road repair was made recently by a party of Washington (D. C.) riders on a run to Reading, Pa. Among the machines used in the run was a 1913 Emblem, which in some manner sustained a broken exhaust valve cam. The difficulty was overcome by removing the broken cam and replacing it with the intake valve cam, and by moving the intake valve push rod and tappet rod, the valve was allowed to operate automatically, while replacing the intake spring. This was replaced by a weaker spring obtained from a tire pump. Through this device the machine made the entire journey and returned by its own power, thus demonstrating its ability to run satisfactorily under adverse conditions.

TOLEDO DIRT TRACK MEETS

EIGHT events make up the schedule for the first of a series of dirt track race meets to be held by the Interstate Racing Association of Toledo, Ohio, during the 1913 season. The races will be held on the Fair Grounds track at Toledo. It is reported that considerable money has recently been spent on this track, which is now in good condition. The first meets were held on May 25 and June 8. Others included in the present schedule are booked for June 8, July 13, August 31, and September 14.

AN INTERESTING COMPARISON

PAUL J. BAILEY, advertising manager of the Consolidated Mfg. Co., recently saw a Yale motorcycle standing in front of an automobile in such a position that attention was called to the tires, and an examination disclosed the fact that the sturdy Toledo product was carrying tires of the same size as those used by the four-wheeler. He promptly obtained a photograph, which is reproduced herewith, and it is being used as a strong argument in support of the claim that Yale machines are every bit as strong as they



look. The automobile, whose front wheels appear in the picture, weighed 1,800 pounds more than the motorcycle, but its tire equipment was no more efficient than the light and speedy single-tracker.

MORE EUROPEAN TOURISTS

LEAVING the office of the Toledo *Blade* Thursday morning, June 5, Charles Swartzbaugh and John Cager started on a motorcycle trip that will take them through all the principal countries of Europe. They will ride their Yale twins to Montreal, Can., from which

point they will sail. They are carrying a letter from Governor James M. Cox, of Ohio, to the Lord Mayor of London. Swartzbaugh and Cager are shown in the accompanying picture, Swartzbaugh at the right.

CAPITOL RIDERS AT GETTYSBURG

UNDER the leadership of their former captain, George W. Beall, members of the National Capitol Motorcycle Club, of Washington, made a run to Gettysburg, Pa., on May 30. No trouble was encountered on the outward trip which carried the riders through Rockville, Damascus, Ridgeville, Frederick and Emmittsburg. At Gettysburg the party divided, the majority retracing their route to Washington. George W. Beall and A. A. Schultz proceeded to Reading, and thence through Harrisburg and Philadelphia and back to Washington by way of Havre de Grace and Baltimore. They made the entire trip of about 500 miles in less than three days.

The Merkel riders, captained by Harry F. Seamark, traversed the same route to Reading; where a day's stop was made. In returning they followed the same route as did Beall and Schultz.

ONEIDA-VERNON RACES

MOTORCYCLISTS of Oneida and Vernon, N. Y., witnessed one of the most successful dirt track meets ever held in the vicinity on May 30. The races were held under the auspices of the Oneida Motorcycle Club and the Vernon Association. Horse races and a ball game were included in the day's program, but neither compared with the motorcycle events in interest or excitement. Summaries:

Five miles; amateurs; stripped stock—Dolin, Excelsior, of Syracuse; Myers, Harley-Davidson, of Oneida; Holbrook, Indian, of Solvay. Time, 7:38.

Five miles; professionals; stripped stock—Duvall, Indian, of Syracuse; Daycock, Indian, of Oneida. Time, 7:06¼.

Five miles; amateurs; 50 cu. in. displacement.—Ryker, Indian, of Oneida; Holbrook, Indian, of Solvay; Vendetti, Reading-Standard, of Syracuse. Time, 7:01.

Design and Location of High Tension Spark Plugs

Extreme Care Must be Used in Construction If Plug is to Withstand Extraordinary Strains of Ignition Service—Requirements of a Good Spark Plug and Method of Placing it Properly

By Alfred H. Bartsch.

PERFECT ignition will go far toward making the success of a gas engine, the capacity and efficient operating merits of which depend more on the perfection of that detail than on any other. Much importance is attached to the carbureter, lubricating devices and other accessories generally fitted on gas engines, but their burden, so to speak, is hardly equal to that of the operating parts of the magneto and its much abused, and often unconsidered auxiliary, the spark plug.

Lying in the dealer's showcase, or in the tool kit of the motorcycle, spark plugs appear quite simple in construction, but when the conditions under which they have to operate and the functions that they have to fulfill are understood, it will be appreciated that the designing of a spark plug involves a problem. It should, therefore, be understood that it is not merely a spark plug that is to be chosen but a perfect one.

PLUG SUBJECTED TO HEAVY STRAIN.

In the opinion of the average rider a high-tension spark plug consists of a threaded piece of metal and an insulated core having a metal wire or bar passing through its center, so arranged that a gap exists between these two metal parts. When the plug is properly connected with the ignition system, an electric current jumps across this gap at certain predetermined intervals, forming a spark as it passes. Furthermore, it is generally supposed that the spark passing across the plug electrodes will ignite the mixture, or gas charge, equally well if the sparking points are anywhere within the combustion space.

These opinions are correct in general, but the idea of the engineer and engine designer is quite different. To them the construction of a spark plug, and its location in the cylinder, are of vital importance. Special study has been given to the plug's construction and location, for the conditions of service which it is called upon to meet are difficult in the extreme. It is screwed tightly into a cylinder-head, or valve-cap, and the electrodes, or points, project into a small enclosed chamber where they are subjected not only to an intensely hot flame from one-quarter to one-half of the motor's operating time, but must withstand pressures varying almost instantaneously from less than atmospheric to four hundred pounds or higher per square inch.

In addition to that there is the moving piston inside of the chamber, which at all times must be generously lubricated, and the lubricant is often caused to lodge in the form of thick short-circuiting gum on the electrodes and the insulating members of the spark plug. The plug must operate perfectly notwithstanding these conditions.

The distance which makes the so-called spark gap must be maintained in strict accordance with engine requirements, and with the current with which it is used. The insulator must be of such a character that it will continue to offer high electrical resistance, in spite of the effect of intense heat, carbon, or burned oil.

In view of what has been said, it will no doubt be of interest to the reader to consider the most important requirements of a spark plug. Briefly, they may be analyzed as follows:

That the insulation must resist the destructive effects of heat and possess a surface which, when exposed in the combustion chamber, shall be so smooth that it will be difficult for carbon deposits to accumulate upon it. Most important of all, it must have the highest possible insulating properties and be sufficiently heavy and strong to withstand vibration and shock.

That the plug must be absolutely gas-tight—it being known, of course, that the spark plug is exposed to the high pressures existing in the cylinder—and, if possible, a design should be chosen which will prevent the leakage of this pressure.

That the electrodes be of such construction and so arranged that carbon and oil will not affect the passing of the spark. The electrodes should present the least possible resistance to the passing of the current, so that an efficient spark may be obtained at very low engine speeds.

That the electrodes be so constructed as to render pre-ignition almost impossible.

That the electrodes be made of a material which will not burn away and thereby offer greater resistance to the current.

That as far as possible all the heat of the spark should be given up to the gas, but that certain mechanical arrangements should be taken into consideration when designing the plug, so that the heat which surrounds the plug itself and is necessarily accepted, should be transmitted into the open air to prevent over-heating of the plug in general. Here is involved a very important point.

IMPORTANCE OF PLUG LOCATION.

The place in which the spark occurs makes considerable difference to the ignition results, and, therefore, in the efficiency of the engine. In the ordinary gas engine, the best practical location in which the spark can occur is about flush with the inside surface of the cylinder wall or valve cap. Theoretically, the best position would be in the center of the compressed gas, but to accomplish this result a plug would have to be used which had a very long reach, and such a plug having so much of its surface exposed to the gas would become incandescent and cause pre-ignition. If a plug with too short a reach is used, so that the spark occurs inside of the hole or chamber through which the plug is screwed, good results cannot be obtained, due to pocketing of dead gas about the electrodes, with a consequent lag in ignition of the charge. Also if a weak mixture were being obtained from the carbureter, pre-ignition would very likely occur, owing to the mixture which is left in the pocket continuing to burn, and the fresh gas entering during the induction stroke would be ignited before the proper time.

It is the opinion of some "would-be expert" motorcyclists that it is preferable to place the spark points of a plug in a pocket, as such an arrangement would tend to keep them clean. While there may be something in this opinion when a worn piston is being considered, one which allows lubricating oil to get upon the spark points, in so far as ignition alone is concerned, the idea is distinctly bad.

The idea in engine and plug designs providing for a little pocket in which the spark occurs, is supposed to be a good idea inasmuch as it will instantaneously ignite all the gas in the combustion chamber by tongues of flame shooting out of the chamber or out of the separate holes, but this is quite wrong. There would be no tongues of flame, for combustion spreads through the small chamber, through the hole or holes, and then through the main chamber at a definite rate of speed. Therefore, the speed of combustion would be considerably retarded, due to the choked passages. Small and large chambers form one combustion chamber, in reality being only divided by what we may term a baffle plate. It is obvious that the removal of this baffle plate would be an advantage. Further, the ignition of gas through small outlets or holes is extremely uncertain, if the theory of the miner's safety lamp is relevant. The reader will understand that the principle of the miner's safety lamp is that the gas cannot reach the flame, due to the smallness of the holes in the perforated metal surrounding the light.

POINTS ON SPARK PLUGS.

It is decidedly not advisable to use cheap spark plugs as they cannot give the best results and are very likely to fail at a critical moment. It is, therefore, well to give little consideration to the price, but to seek more to purchase a plug made by a well-known manufacturer, one who has a reputation for turning out a product of high quality. By this policy much trouble will be avoided.

A plug of simple construction, having at the most three sparking points, will undoubtedly prove to be the best, although it is advisable to see that the spark is produced away from the metal body of the plug so that all the heat of the spark will be given up to the gas. It is essential to have substantial sparking points made of good metal, such as nickel. If inferior metal is used, the electrodes will burn away very quickly causing trouble and waste of time.

To obtain the best results from a gas engine, a plug should be selected which will bring the sparking points as nearly as possible flush with the inside walls of the cylinder or valve cap. The spark plug cap should be adjusted so that it is about 1/50 of an inch, or in other words, .5 of a millimeter. This in casual measurement is about the thickness of an ordinary visiting card, but it would be better to use the exact measurement. See that the shoulder of the plug is smooth and true, so that when it is screwed into position it will not injure the copper asbestos gasket, or washer. It is essential that a copper gasket be used to prevent leakage, and for that reason the metric or ⅞ A. L. A. M. (S. E. A.) spark plugs are the better sizes.

HER RIVAL

by W. G. PAULSON

I'm most dissatisfied with Dick—
I don't suppose he'll ever know it—
His conduct cuts me to the quick.
And yet I'd rather die than show it.
My meditations ever are
Disordered by one constant riddle,
Why should I—to a motorcycle—
Now play second fiddle?

In vain I toss my curls to show
The sweetest pair of turquoise earrings;
His thoughts are wandering, I know,
With silencers and two-speed gearings.
If I could find some magic drug
To change me to a carbureter,
A cylinder or a sparking plug,
I know he'd like me better.

And when I sing of tears, the rest
Entreat for more and praise my brilliance;
But Dick returns with cheery zest
To themes of rubber and resilience.
When rosy dusk to moonlight melts,
And all have vanished save the lovers,
Is it then a time to talk of belts,
And horrible outer covers?

My amber voile came home to-day,
I'm really too upset to wear it.
My heart is sore, yet strange to say,
Day after day, I grin and bear it.
He doesn't worry if I'm stiff,
Or if I snub or talk above him;
I'd break it off to-morrow, if—
I really didn't love him.

Kansas Bankers Welcome Motorcycle Deputies

Short Grass Club Launches Movement to have 1750 Riders Commissioned for Patrol Service and State Banking Association will Strive to Raise all the Funds Needed for Organization.

WHEN the Kansas State Bankers' Association held its annual convention in Hutchinson not long ago one of the most important matters discussed was the proposed organization of a motorcycle patrol squad to assist in running down criminals. It was obvious that the bankers would benefit directly by any movement to discourage thieves, and that the safety of their institutions would be materially increased with a squad of fearless motorcycle deputies ready to slip into the saddles of their mounts and take to the trail at a moment's notice. Accordingly, they went on record as favoring the plan strongly, and some idea of their enthusiasm may be gained from the fact that they will endeavor to raise all the money necessary to organize such an emergency force.

At a meeting to be held June 15, Secretary P. E. Zimmerman, of the Kansas Short Grass M. C., will confer with the bankers and give them first-hand information as to the possibilities of the motorcycle in police work. He will also suggest plans for organizing the patrol. If the present movement is as successful as its advocates believe it will be a bill will be presented at the next session of the Kansas Legislature making the motorcycle patrol a permanent part of the law-enforcing machinery of the State.

Pending this official action the patrol will be developed as far as possible, and already there are many names on the applicants' list. Each member of the patrol squad will receive his deputy's commission from the sheriff of his county and he will then be in a position to answer a call at any time. The only returns will come in the form of rewards obtained through captures, so it will be up to the motorcycle deputy to bring down his quarry once he takes to the trail. Practically all the clubs of Kansas have approved the plan and promised their support.

The idea of the motorcycle patrol originated in the Kansas Short Grass Club and no rider will be eligible to wear a deputy's badge unless he is a member in good standing of that hustling organization. He must also be affiliated with the F. A. M. and be so constituted morally and physically that he may be depended upon in any kind of an emergency. An effort will be made to have all members of the patrol exempted from poll tax, city tax and State license tax. When the Legislature finally takes the matter up it is likely that arrangements will be made to pay the riders for services rendered, even though they may not be entitled to a reward for a capture.

The offices to be filled at present are as follows: One chief; eight captains; 105 lieutenants and two patrolmen in each town and city, making a total of 1750 men. Applications should be forwarded to Secretary P. E. Zimmerman, at Lindsborg, Kans.

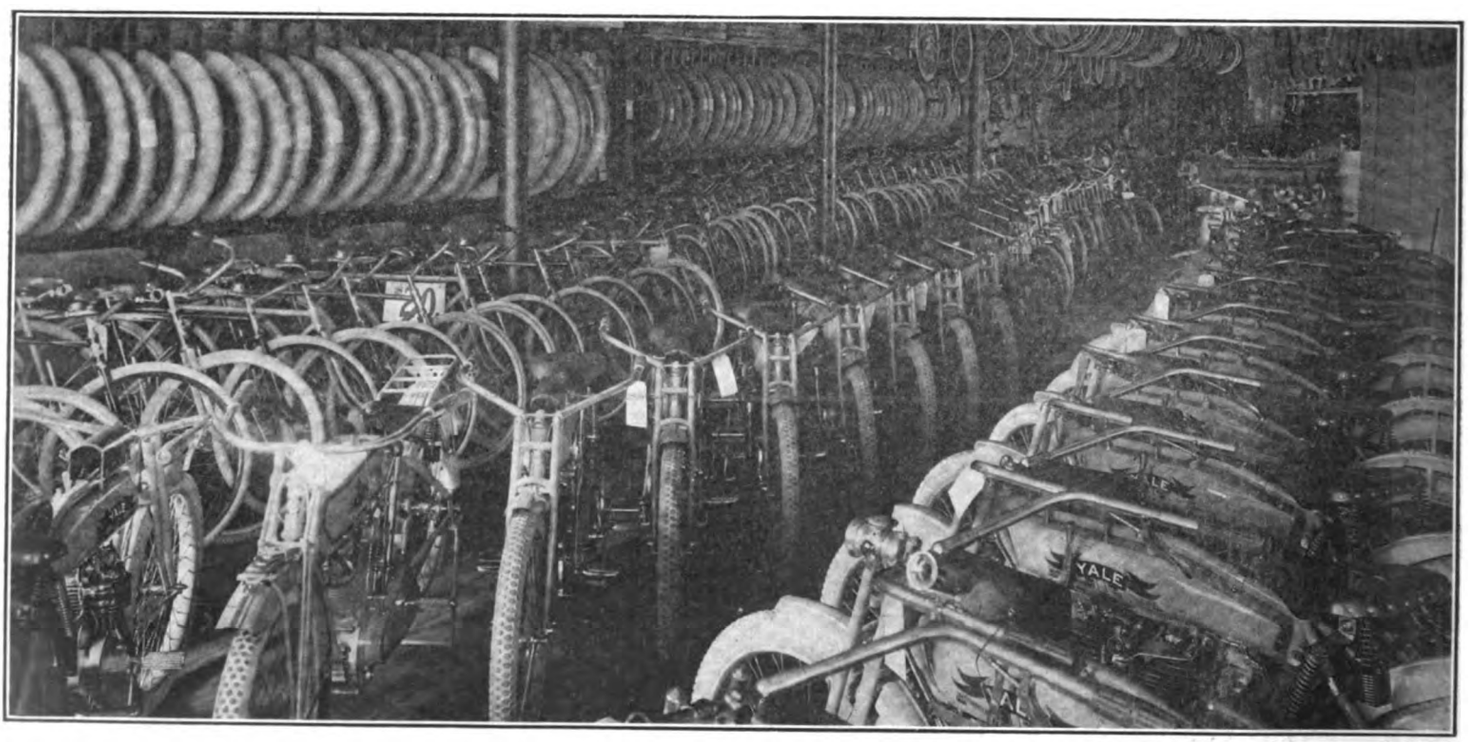
A HELPFUL DECISION

IN A case tried before Judge A. R. Malone of the police court in Washington, D. C., recently, a point relating to the use of motorcycles was brought out which is of great importance to local riders. It has been understood locally that no motorcycle could be ridden except by the owner thereof, and many owners when arrested for riding another's machine have allowed their deposits to be forfeited in the police court, to the amount of hundreds of dollars, although they were in possession of permits to operate a motorcycle.

Recently, however, a prominent local motorcyclist who is a member of the Washington Motorists' Association was arrested by Officer J. G. Dellamico, of the Ninth Precint for alleged wrongful use of a motorcycle registration number. On the rider's protesting against the interpretation of the regulation, he was allowed by the officer to depart without a deposit, subject to call. After consulting with the secretary of the automobile board and receiving an unfavorable report, Officer Dellamico summoned the rider before the police court. The rider immediately called upon W. S. Duvall, attorney for the Washington Motorists' Association, who took personal charge of the matter. The entire question of registration was taken up and it was set forth by the district authorities that although in order to properly collect the personal property taxes, it was made illegal to transfer a registration number from one machine to another—even though the property of the same owner—there was nothing in the regulations to prohibit a rider having a permit to operate a motorcycle, from driving another's machine; with its owner's consent, and with the actual owner's registration number thereon.

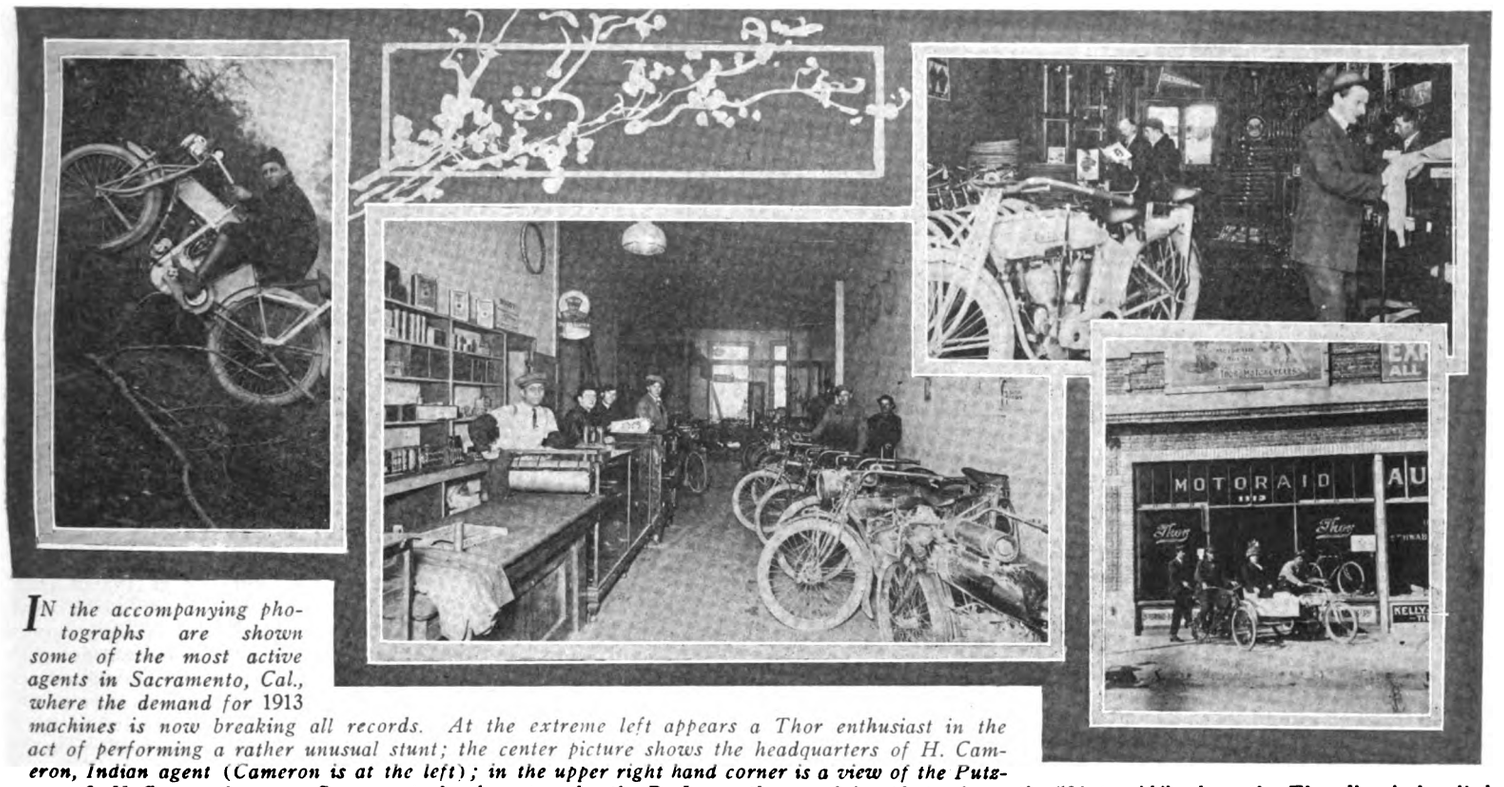
WINNERS IN IRISH TRIAL

INDIAN motorcycles had things pretty much their own way in the recent Irish open sidecar trial, conducted by the Dublin Motorcycle Club, the wigwam products taking first, second and fifth places. C. B. Franklin, the winner, made the only perfect score on an Indian. J. L. Walsh, who took second place with 99 points, was the winner of a special prize offered by the Hendee Mfg. Co.



An Impressive View of the Interior of the Howard Cycle Company's Headquarters in Trenton, N. J.

Digitized by Google



IN the accompanying photographs are shown some of the most active agents in Sacramento, Cal., where the demand for 1913 machines is now breaking all records. At the extreme left appears a Thor enthusiast in the act of performing a rather unusual stunt; the center picture shows the headquarters of H. Cameron, Indian agent (Cameron is at the left); in the upper right hand corner is a view of the Putzman & Hoffman salesroom, Sacramento headquarters for the De Luxe; the remaining photo shows the "Motoraid," where the Thor line is handled.

Picturesque Route Mapped for Sunset Ramble

Los Angeles Motorcycle Club Will Escort Big Squad of Tourists Upon Ten-Day Outing Over Ideal Roads and Through Scenic Districts, Beginning June 16—Special Features En Route.

LATE bulletins are to the effect that all is in readiness for the ten-day Sunset Ramble of the Los Angeles Motorcycle Club and that indications point to a program that will set a new standard, even for the high-pressure enthusiasts in Pacific Coast territory. The route for the Ramble was mapped by a squad of seasoned pathfinders under the direction of "Dare-Devil" Paul Derkum, and a wide-awake committee has been at work on the general plans for several months past. Derkum's most active lieutenants in the pathfinding have been Secretary A. H. McCulloh and Director F. A. Martin, of the L. A. M. C.

The Ramble will start from Los Angeles on June 16 and 110 miles will be covered on the first day, the night stop being scheduled for Santa Barbara. The party will leave the headquarters of the club, 449 West Jefferson street, at 6 a. m. and proceed through Hollywood, Cahuenga Pass, Lankershim, Van Nuys and Owensmouth over 26 miles of fine roads. The route then runs on through Calabas, Conejo and Ventura On The Sea. Beyond Ventura the new road around Casitas Pass, known as Rincon Causeway, will be followed to Carpenteria and then there will be only a short jaunt into Santa Barbara.

On the second day the tourists will cover 124 miles, from Santa Barbara to San Luis Obispo. The first division will be sent off at 6 a. m. The run for this day is along the sea. Beautiful scenery will be encountered, especially in passing through the Santa Ynez mountains at Caviota Pass. The roads are easy and the trip to the Santa Ynez valley will be a most enjoyable one. Here will be found the towns of Los Olivos and Santa Ynez, a few miles beyond the city of Santa Maria. From the last named point the route is over rolling country to the coast at Pismo, passing picturesque old Arroyo Grande.

The schedule for the third day calls for a run of about 110 miles, from San Luis Obispo to Hanford. This leg of the outing will be along the mountains hedging the great inland valley of the San Joaquin, a district of great scenic beauty. At latest reports it was understood that Hanford would be the stopping place for the night, although it was possible that a change would be made providing for the night stop at Visalia, Tulare, Porterville or Fresno. A trip of about 85 miles has been mapped for the fourth day, ending at Merced. Here there will be a banquet in the evening, followed by dancing and other entertainment features.

The run for the fifth day will be from Merced to San Jose, about 90 miles. The route lies westward into the famous Santa Clara valley. In San Jose the ramblers will stop for a day and will participate in the F. A. M. State Convention which will be in session at that time. Having spent a day in San Jose the tourists will ride on to Paso Robles on the seventh day, about 175 miles. This will be the longest run of the Ramble, but the roads are good and the country interesting. Many of the old missions will be passed and San Juan Grade and Jolan Pass will be features of this leg. At Paso Robles there will be a ball and banquet in the evening.

About 43 miles will be covered on the eighth day, to Pismo Beach. This run is expected to be one of the most enjoyable of the entire outing as the roads are ideal, the scenery pleasing and the beach itself an admirable amusement place. One of the features at Pismo will be a clam bake and a number of motorcycle races will be held on the broad smooth beach. The trip from Pismo to Santa Barbara, 110 miles, will occupy the travelers on the ninth day. They will pass again through the Santa Ynez mountains and follow the seacoast practically the entire distance to Santa Barbara.

The trip for the tenth day will be another 110-mile jaunt back to Los Angeles. The run will be over El Camino Real, affording good going and easy grades. When the riders arrive in Los Angeles they will go to the club headquarters for a big reception and banquet. The committees believe that the route chosen embraces the best roads and scenery in California, and owing to the care with which all the arrangements have been made it will be possible to make the entire trip on a surprisingly small outlay.

S. P. C. A. JOINS THE RANKS

PHILADELPHIA, PA.—The Pennsylvania Society for the Prevention of Cruelty to Animals has purchased a 7 h. Indian motorcycle for the use of Edward W. Lentz, its representative in this city. Mr. Lentz is to patrol the streets of the city on the lookout for animals that are being maltreated, and it is believed that the motorcycle will prove much more economical than a horse and carriage.

A RUN TO ALBANY

A 450-Mile Jaunt Through Southern California

Los Angeles Tourist Found Fair to Good Roads Leading Through a District of Widely Varying Scenic Features on Run to the Mexican Border—A Single Cylinder Machine Proved Equal to All the Grades.

By Henry A. Pinaire.

IN the article which follows, Henry A. Pinaire, of Los Angeles, Cal., gives a fair idea of what southern California can offer in the way of a short tour. Pinaire followed a 450-mile circuit, including a number of the old mission settlements, and also traveled along the border line of Mexico.

"It was a warm day early last spring," writes the California tourist, "when I started out for a three-day motorcycle trip to which I had been looking forward for some time. I planned to go east from Los Angeles to Riverside, and south from Riverside to San Diego. The first town on my route was Pasadena, which is just outside the city limits of Los Angeles. From here my course lay along the Foot Hill Boulevard, which, as its name indicates, runs along the base of a long mountain range. I followed this road eastward, passing large orange and lemon groves on either side of the road. English walnuts and olive trees were also much in evidence throughout this section.

"The road was good, and about 10.30 a. m. I passed to the south of 'Baldy,' the highest peak in the range. It was covered with snow and afforded a beautiful contrast to the blooming orange and lemon groves by which I was surrounded. A few miles further on I got a fine view of the wide and fertile valley which surrounds the city of San Bernardino, where I stopped for lunch. After renewing my gasoline supply I headed toward the mountains north of San Bernardino, and to the popular Arrowhead Hot Springs. The road was good, but the grade rather steep. The Arrowhead, a formation in the side of the mountain, just below the Springs, could be seen for a number of miles.

THROUGH AN ORANGE DISTRICT.

"I rested for a short time at the Springs and then returned to San Bernardino. From there I rode southward through one of the finest orange districts en route, and reached Riverside about 4 p. m. With the exception of a couple of short stretches of oil road, which were badly worn and rough, the going was good. I stayed in Riverside overnight and the next day being Sunday, I went to church before starting my day's jaunt. The road from Riverside was in fine condition, and I soon passed through Perris. A short distance from this town is Lake Elsinor, a beautiful little body of water located between two mountains.

"My route lay through the Temecular Valley, of which Temecular is the chief town, to Fallbrook. After eating lunch at the latter place I again took to the road and soon encountered a steep grade. I had to readjust my carbureter in order to make the climb. This was the only difficulty I had on the entire trip, despite the fact that I rode a single. Shortly after leaving Escondido, a town not far from Fallbrook, I passed through the Red Mountains, which are full of dangerous curves. The roads were good and the hills not very steep. After about 30 miles' riding over roads which were generally good I reached Poway grade.

"I was now riding downhill and passed through Murphy Canyon to the Mission Valley, where I visited the remains of the old San Diego Mission. Continuing southward from here I reached San Diego about 6 p. m., having covered 135 miles for the day. I now decided to change my plans and instead of returning to Los Angeles the next day I rode south over the Mexican border to the village of Tia Juana. I passed the Mexican customs officers without having to dismount, but on returning the United States customs officials took my name, and I had to swear that I was not bringing back any goods bought in Mexico.

ON THE LAST LEG.

"I was back in San Diego in time for lunch, and in the afternoon I rode around the bay over a fine boulevard to Point Loma, where

the government lighthouse is located. The next morning I filled my gasoline and oil tanks and started on the last leg of my trip. I followed the road along the bay and across the Mission Valley to the coast route, which was over a fine boulevard to La Jolla. Leaving this point I had fair roads, as a rule, with some rough and sandy ones. At one place I came to a stretch of road which I was not permitted to use. Instead, I had to make a short detour over plowed ground and soon struck the main road again. I stopped at the Old Mission at San Juan for lunch. This is one of the oldest and largest of the many missions which lay along the coast route of California, south of San Francisco and extending into Mexico. This mission was founded in 1776 and some of the original adobe walls are still standing, while a few of the buildings are used to this day as residences.

"Leaving this settlement I rode through some fertile farming land and again entered the orange and lemon district, which is more prosperous than the section in which I had been traveling. At Santa Anna I turned west to the coast at Long Beach, where I again struck a good boulevard, which, after the roads I had been riding, seemed quite a treat. I covered the remaining 22 miles from Long Beach to Los Angeles in jig time, arriving in the latter place about 5:30 p. m. I hade ridden about 150 miles since morning. This trip, although not long, affords a wonderful variety of scenery with roads generally good, but with enough poor ones to make it interesting."

INDIAN DAY PICNIC

"BIG CHIEF" SWENSON, of Providence, R. I., has set aside June 22 as Indian Day and has invited all Indian riders to be his guests at a picnic to be held at Hillside Farm, Noose Neck. The riders will assemble on Exchange Place at 9:30 a. m. and all must know the pass words: "Count the Indians on the Road." Refreshments will be served free and many games have been planned. There will be a 100-pound porker turned loose in an eight-acre field and the one catching it and holding it the longest will become its owner. A ball game, a tug-of-war and a hillclimb are included in the list of events for men. For ladies Swenson has arranged a potato or egg race, tug-of-war between tandem and sidecar girls and a 100-yard dash. Useful prizes will be given to the winners of all events.

ABOUT THE PHOTOS

PICTURE No. 1 on the opposite page shows four California enthusiasts on the Vallejo-Napa road, three miles north of Vallejo. This is a splendid road all the way to Calistoga, about 45 miles. In the vicinity of Napa there is some especially attractive country. Near Calistoga is the celebrated petrified forest.

Not long ago St. Petersburg, Fla., had a "White Way" carnival with a view of interesting the citizens in better lighting facilities for the town, and a prize was offered for the most attractive exhibit in a parade. The award went to Mr. Parker, chief electrician of the local power company, who decorated his Pope twin as shown in picture No. 3. The outfit scored a tremendous hit.

H. A. Stewart, of Indianapolis, a member of the Indianapolis M. C., appears in photograph No. 2. Stewart is now on his way across the country with San Francisco as his destination. He is a well-known rider, having devoted all of last summer to long path-finding trips for an Indianapolis map company.

Photograph No. 4 shows the new Jefferson agency at 816 Ninth street, N. W., Washington, D. C. Proprietor Sam McPherson is on the motorcycle and Mrs. McPherson is seen standing at the entrance.

M. E. Remelin, of the Bumiller-Remelin Co., Cincinnati, Ohio, is the central figure in picture No. 5. Some of the Cincinnati boys were talking of racing on a recent outing and the genial Remelin straddled the wierd-looking mount shown in the photograph and offered to give any of them a whirl or two. No one picked up his challenge.

ECLIPSE

The Brake You Can Trust

Confidence!

Ah! What a superb feeling of absolute delight the rider experiences while coasting down some steep hill, with the cool breeze whistling past him, a great panorama of rolling hills beneath him and, best of all, an ***absolute riding confidence,*** born of the knowledge that in an emergency he can bring his mount to an abrupt halt—in its own length. It is equipped with the ECLIPSE PERFECTION MULTIPLE DISC BRAKE.

The Eclipse Perfection Multiple Disc Brake is stronger, proportionately, than the most powerful automobile brake ever made.

It has a braking surface of more than 100 square inches. That means for every three and a half pounds weight there is one square inch of braking surface.

THE MOST POWERFUL AUTOMOBILE BRAKE MADE MUST WITHSTAND 9½ pounds weight to the SQUARE INCH.

For every use to which a brake may be put, side-car, tandem and solo riding, on the steepest gradients, the ECLIPSE BRAKE works with unfailing accuracy and immediacy. Its ball-bearing construction, combined with its ideal lubrication system, makes it practically indestructible.

Riders—ask your dealer to show you the perfect action of the Eclipse. He'll be proud to show it to you.

MOTORCYCLE ILLUSTRATED

Published every other Thursday at 51 Chambers Street, New York. Home subscriptions, $1.00 a year; foreign, $2.00; 10 cents a copy.

TELEPHONES 3690 AND 3691 WORTH.

Entered as second class matter July 6, 1908, at the Post Office at New York, N. Y., under Act of Congress March 3, 1879.

J. LEO SAUER, President.
H. N. CONDICT, Secretary.

WESTERN REPRESENTATIVE:
HARRY G. JACOBS
1220 First National Bank Building, Chicago. Telephones 5908 Central and Randolph 1022.

PAID CIRCULATION THIS ISSUE, 13,825 COPIES.

OWING to its large circulation, it requires two full days of 24 hours each, after the last form has closed, to print, bind and mail a full edition of MOTORCYCLE ILLUSTRATED. In view also of the fact that this publication is read in more than 2,400 different cities, towns and villages in the United States, its wide distribution demands that each issue be placed in the mails not later than noon every other Thursday, the date of publication. In order to make the mails at this time, forms must close not later than 6 p. m. Tuesday, and advertising copy cannot, therefore, be handled if received later than Tuesday morning.

This applies also to text matter. Photographs should reach us not later than Monday morning preceding each date of issue. They will be given better attention if reaching us the Saturday preceding.

MOTORCYCLE ILLUSTRATED requires correspondence and subscription agents in many towns where the paper is not already so represented; we pay a liberal commission to subscription agents, and the best space rates for text-matter, drawings and photographs.

EDITORIAL VIEWPOINTS

DESPITE the strenuous efforts of Commissioner McLain to make it a success, it cannot be said that the Indiana State Convention came up to expectations. It is surely to be hoped that the Ohio and New York State meets, to be held in Cleveland and Elmira, respectively, will each have a much larger attendance. At the Columbus National Assembly last year the delegates, in response to an apparent demand for more representation on the part of clubs and individuals, voted unanimously in favor of State organizations, thus affording to all F. A. M. members an opportunity to actively participate in the government of the national body. Under the Constitution and By-Laws, they have the right to elect State commissioners and delegates, recommend State referees, and exercise within their respective States all the powers that are not expressly delegated to the organization at large. But this is not possible unless the members take part in the various State conventions. Not only is that their privilege, but it also ought to be regarded as a duty, as the national officials desire and need just that sort of local and State co-operation.

CO-OPERATING WITH THE STATE ORGANIZATIONS.

WHEREVER State F. A. M. bodies have prepared convention plans—and a number of fine programs are now in readiness—a special appeal has been made requesting affiliated clubs to schedule their individual runs and race meets so that they will not conflict with the State event, and it would seem that such co-operation should follow naturally. Still, in more than one instance a State Commissioner has been kept on the anxious seat by the announcement that a club event of considerable importance would be staged simultaneously with the State program or immediately preceding it. It stands to reason that any racing or entertainment program carried through in the vicinity of the State convention city must "steal some of the thunder" of the latter, and for this reason affiliated clubs can reasonably be expected to give the State organization the right of way under all ordinary conditions.

ANOTHER MYSTERIOUS RULING AGAINST MOTORCYCLES.

THAT there are still existing a few of the unreasonable prejudices which hampered the early development of motorcycle interest in this country cannot be denied by even the most optimistic friend of the single-tracker, and from time to time these evidences of mysterious disapproval crop out at unsuspected points. A few days ago a Yonkers, N. Y., motorcyclist discovered that it would be impossible to transport his machine on either the trains or boats of the Central Railroad Company of New Jersey. A letter from the passenger department of the company informed him that motorcycles would not be carried under existing baggage regulations, and that no special tariff covering the transportation of the machines has been filed. This amounts to a ban on the motor two-wheelers, and it is an especially onerous ruling as applied to the company's boats, which ply between New York City and Jersey coast points on the Sandy Hook route.

The matter has been promptly taken up by Chairman Sauer, of the National F. A. M. Committee on Legal Action, and a modification of the ruling is hoped for. Still, the fact remains that the Central Railroad Company disapproves of transporting motorcycles, and that its decision, as at present interpreted, admits of no qualification. It is but fair to state that the shipping of a motorcycle involves some unusual conditions, but certainly none that justifies the C. R. R. company's attitude. It is not the simplest task in the world to lift a motor two-wheeler into or out of a baggage car, but this may also be said of numerous other articles that are carried without question. Assuming that extra trouble and responsibility were imposed, it would not be unreasonable to expect a special tariff, but the company has not seen its way clear to make concessions, even on this basis.

The objections cannot be built upon the claim that gasoline, carried in the tank, would subject the company to excessive risk, for the Yonkers rider took considerable pains to explain that the fuel tank would be emptied before the machine was offered for transportation. Some light is thrown upon the situation by the announcement that the ruling in question applies also to automobiles and aeroplanes. Obviously, neither of these motor vehicles could be carried in a baggage car, nor could they be transported under ordinary conditions on the C. R. R. boats. But the motorcycle can be transported by either land or water routes and with little more trouble than would be involved in the shipping of a bicycle. Minus its gasoline, the motorcycle becomes simply a heavy bicycle, capable of entering a train or boat by any passage that admits the general run of baggage. Nor does it occupy much more room than a bicycle.

PICKED UP ON HIGHWAYS & BYWAYS

ARTHUR CHAPPLE, dean of the Brighton Beach racing squad, was on his way to the motordrome from New York one afternoon recently when he overheard a conversation between a fair enthusiast and her escort in a B. R. T. car. "Oh, let's go to the track in preference to Coney," exclaimed the girls. "If we miss a night at Brighton I just know there'll be a fine smash-up and we won't see it." Chapple moved to another seat.

AN ENGLISH exchange believes the time is ripe for a "motorcyclette," to sell at $80 to $100 and embody the following features: Two-stroke twin motor generating one horsepower; variable gear; control by three levers, operating brake, gears and throttle; weight of 80 pounds.

O. C. GODFREY, the well-known Indian pilot in England, was recently married to Miss Muff Archer, an actress and dancer.

"COUNT me out of racing for this season unless there is a chance to do something really worth while," says Johnny Constant, the amateur champ. "Meeting all comers on all kinds of tracks is too risky for the returns it gives."

AT LATEST reports the Abernathy kids, on their way by motorcycle from Oklahoma City to New York, were breaking even with their schedule and giving the laugh to sand and rough going in the Southwest.

A FEW more such trips as the Kansas Short Grass Tour and the Sunset Ramble of the Los Angeles Club, for which plans are now ready, and the incredulous public will no doubt arrive at the conclusion that motorcycles are being used for pleasure purposes.

REPORT has it that the engineers at the Marconi wireless stations in Ireland run the internal combustion engines which operate their dynamos on a spirit extracted from peat. Go easy; it may still be discovered that the Standard Oil folks own the peat.

J. H. WILKINSON, of Doncaster, Eng., is the inventor of a new motorcycle carbureter with twelve jets. A valve semi-rotated by Bowden wire to the handlebar covers and uncovers the jets. The inventor claims more power; greater flexibility; low fuel consumption; rapid acceleration without choking; independence of atmospheric conditions; non-stoppage of jets and perfect vaporization. For cooling the motor all the jets may be closed and the air-lever opened.

A NEW accessory arrival abroad is a neat circular leather case designed to hold and protect an inner tube when the latter is wrapped around the handlebar near the steering-head. A lock is provided as insurance against theft.

WAR is h——! The Herts M. C. in a recent English hill-climb used a small cannon to start the contestants. As a rider was getting under way the cannon swung about and was fired across the road accidentally. The rider crashed into a bank and went down for the count.

MAKERS of the English John Bull tires furnish motorcyclists with booklets in which to note their daily mileages. The riders with the highest mileages on these tires will be awarded prizes by the company.

SAYS Tommy Dedge, the Washington (D. C.) speedster: "A bird-cage spring can be used to advantage to hold a carbureter open while racing on dirt tracks, with mixers that are prone to 'walk' closed while oil is being pumped."

WHEN it is desired to raise or lower the gravity of oil by mixing, warm the two oils to about blood heat before attempting to blend them. If handled cold the mixing will not be successful, the heavier oil going to the bottom and remaining there.

G. E. STANLEY, the speedy Britisher who pilots the Singer, breeds prize bulldogs as a hobby. Two of his entrants in a recent show won firsts.

SECRETARY-TREASURER GIBSON, of the F. A. M., now has a staff of six assistants and reports that they are always on the jump owing to the rapidity with which the Federation work has piled up of late.

RULING of the Central Railroad of New Jersey that motorcycles will not be transported on its lines may be intended as a "comeback" against riders who have been racing with the company's trains—and running away from them.

TERRE HAUTE (Ind.) correspondent suggests that F. A. M. clubs award prizes on sociability runs to riders with neatest costumes and mounts, with a view of improving the standing of the sport in the eyes of non-riders. A good idea, and timely.

MOTORCYCLE registrations in Johannesburg, South Africa, for the first three months of the current year were 1,204, as against 1,446 for the whole of 1912. The records show 67 makes of machines in use.

STATE COMMISSIONER J. A. Hall, of New York, has launched the *Empire State Bulletin*, a tidy little sheet which will be issued monthly in the interest of New York State riders and the F. A. M. in general. Write for a copy, addressing Mr. Hall, at 322 East Thirty-second street, Brooklyn, N. Y.

H. H. ALDRIDGE, circulation manager of the *News of the World*, an English weekly with a circulation of 2,250,000, says the Britishers make better time than we do in distributing newspapers. They use motorcycles. Mr. Aldridge is now visiting in this country.

ENGLISH Army Council has decided to use more motorcycles than ever before in the 1913 maneuver, both the Territorial Army and Expeditionary forces being equipped with them.

BRITISH motorcyclist has experimented with linen bag enclosing carbureter to keep out dust and grit and finds more satisfactory running.

TOURIST just in from Columbus reports a bad ten-mile stretch of road just east of Geneva, N. Y. Road was practically impassable during a rainfall and he believes it would afford rough going even in clear weather.

ENGLISH writer compliments us upon the fact that we have not acquired the habit of wearing our riding caps with the peak behind, as they do abroad. Haven't time to bother turning them about, old chap; that's about the truth of it.

LATE reports on the route from Springfield, Mass., to New York City, through Hartford, are to the effect that the roads are in good condition.

IF YOU learn of the location of a speed trap, bulletin the F. A. M. Touring Bureau, 51 Chambers street, New York, and thus warn other riders. A postcard will do the trick.

TOURS IN THE DELAWARE RIVER COUNTRY

(*Continued from page 39.*)

good roads system of Orange County. This makes a fine through route from the Water Gap, Bushkill, Dingman's, Milford and intermediate points either to Goshen, Chester, Monroe, Tuxedo, Suffern, New York, Newark, etc., or to Middletown, Newburgh and the east side of the Hudson River.

Of course these trips are frequently reversed and also varied at times by using the lines that cross northern New Jersey to the Delaware River at Milford or Dingman's. Port Jervis is not only a disappointing town to go through, but it has rather inferior accommodations, considering its importance as an interstate route center, and ought to be a first-rate opening for an experienced, enterprising hotel man with capital enough to build up an entirely new establishment.

Travel from Philadelphia and below to the Water Gap-Port Jervis section of the Delaware River divides about evenly between two principal routes: (1) via Willow Grove, Doylestown, Easton and Portland, and (2) via Sellersville, Quakertown, Allentown, Bethlehem, Nazareth, Wind Gap, Saylorsburg and the Cherry Valley. The former comes into the line of the Delaware River 12 miles below Easton, and follows it the balance of the way, while the latter takes a more inland course, and does not touch the Delaware until actually at the Gap; neither way is good throughout, but both are considerably traveled during the summer and fall. There would be another option from Philadelphia, via Trenton, except for the narrow, stony and tire-destroying road most of the way from Lambertville to Easton by that line.

Tours from Reading, Harrisburg and points south and west from Harrisburg usually take the short route from Reading through Allentown to Bethlehem, where they either continue on to Easton, and go up the west side of the Delaware to the Water Gap, or else take the Bethlehem-Cherry Valley line through Wind Gap and Saylorsburg. From Wilkes-Barre and Scranton (including trips from northeastern Pennsylvania and southern New York State points through the "Anthracite Capitals") the natural way is through the Poconos to Stroudsburg, where a left turn is made through East Stroudsburg for Bushkill, Dingman's, Milford and Port Jervis (without going through the Water Gap); or else the nearly direct road is followed through Stroudsburg four miles to the Water Gap. There is another line from Scranton through Carbondale and Honesdale to Milford, but it is not much traveled on account of very bad road, especially between Scranton and Carbondale, in the anthracite mining country.

TRENTON-PHILADELPHIA-WILMINGTON.

Trips from New York to Philadelphia and beyond first meet the Delaware River at Trenton. The usual way is to turn right at the central 4-corners (Broad and State streets), pass the state capitol and turn left on Calhoun street, crossing the toll-bridge over the Delaware River, which is here also the interstate boundary. By going to Philadelphia through Langhorne, Bustleton and Ogontz, the Delaware River is not seen again en route; but if the Jersey side be taken—via Bordentown, Burlington and Camden—it will be seen frequently, and finally crossed by ferry in going into the Quaker City.

In traveling from Philadelphia to Chester and Wilmington, the Delaware River is on the left a considerable part of the way, then it disappears in a southwesterly direction and is seen no more unless one turns down into the State of Delaware. That part of New Jersey on the opposite side of the river is comparatively little traveled by strangers, and its character and appearance are so changed that one can hardly imagine it a part of the same stream that flows quietly through Stamford and Delhi in the Catskills and moves majestically through the Water Gap. The Delaware River country and the Pocono Mountains provide a liberal choice of week-end trips for the business man of New York, Newark, New Brunswick, Trenton, Philadelphia, Paterson, Middletown, Newburgh, etc., when longer tours might be out of the question.

You may stay right at your desk until Saturday noon in any of these cities, or their surrounding towns, lunch and get away in comparative leisure, and still ride without undue haste to practically any point on the Delaware River between Port Jervis, N. Y., and Easton, Pa., or to the principal Pocono resorts before dark.

Half of Sunday may be spent at rest, and the trip home may be made in the afternoon; or a very early start made on Monday morning and the office reached during the late forenoon. The expense is comparatively small and the benefits extend at least through the week—usually beyond. There is usually no trouble about getting suitable accommodations in this district, except perhaps for Saturday night and Sunday, though it is always worth while to telephone ahead for rooms.

SHIPMENTS TO BRAZIL

AMONG the May shipments of the Majestic Mfg. Co., of Worcester, Mass., was one embodying six of the firm's cozy sidecars for an agency in Rio de Janeiro, Brazil. The sidecars were forwarded from New York in connection with a shipment of motorcycles from the Henderson Motorcycle Co., of Detroit. These initial orders have been followed up by repeat orders to both the sidecar and motorcycle manufacturers, thus affording the strongest proof possible that the products measured up to every expectation upon their arrival in Brazil. The Majestic company now has agencies in the Philippines and in the Hawaiian Islands.

TO BUY MORE MACHINES

THE ONLY motorcycle used by the Sacramento fire department is an Indian which was bought last year. The machine has seen steady service and has given such satisfaction that the department contemplates purchasing several more during the present summer.

MEMBERS of the newly-organized motorcycle club of St. Cloud, Minn., recently participated in a run to Paynesville.

Pittsburgh Rider's Clever Address at Club Banquet

Toastmaster Kenneth E. Banks Prefaced Introduction of Director Sauer During Recent Tour by Reminiscent Remarks That "Brought Down the House" Following Banquet by the Pittsburgh M. C.

EASILY the cleverest address delivered in introducing Director Sauer during his recent F. A. M. tour was the one given by Kenneth E. Banks, toastmaster of the banquet of the Pittsburgh M. C. Banks succeeded admirably in arousing the risibilities of his auditors and generally adding to the gayety of the occasion. His address follows:

"Ladies and Gentlemen:—

"That is, I hope that we would all be gentlemen if there were any ladies present.

"It gives me great pleasure to welcome you to this, the first annual banquet of the Pittsburgh Motorcycle Club. In this club we have at last realized our fondest hopes for a permanent organization and for one that will run without giving it 'gas' to keep it going or to put it to sleep. This city and the surrounding territory have a large enough number of enthusiastic motorcyclists to put this club where it should be, among the foremost in this country.

The motorcycle is today conceded to be the cheapest obtainable means of transportation. We often give the old 'bus' a 'shot of gas,' but we do not have to call in the city fallmaster as we do when we shoot a horse. Even the horse on the merry-go-round takes a back seat when the fiery two-wheeled steed enters the field, and the horse-fly has no chance at all. The motorcycle has placed the geography of this country before thousands who knew no transportation before but the trolley or the one-horse-shay, and to whom geography meant a book about a foot square. There is today no more exhilarating pastime than a dash through the fresh country air astride a good motorcycle. And, when I say a good motorcycle, you cannot appreciate just what I mean unless you travel with me back to the days when the motor-bike was a half-grown infant. Then you rode astride a hard-leather saddle with your feet resting on tin bicycle pedals. The tank, in all probability, was fastened to the rear mud-guard like a camel-back engine and the seat post grew right out of the top of the cylinder head. I remember a fellow who was riding one of these 'crocks' away back in the early 1900s who was caught in a rain storm, and the heat from the great, big two horsepower cylinder warped his legs so badly that he had to wear his trousers to bed to keep his legs from being frost-bitten.

"When you rode a 'hack' like that and hit a bump going at anything over 8 miles an hour it felt just as though the dentist had you flat on your back and was trying to take your wisdom teeth from you against your will. To start it, you would probably have to tear down the engine to prime it and would then pedal it a couple of city blocks or take it to the nearest down grade to get a spark. That is, if the front door-bell battery was alive when you pinched it for your spark case. After you got a spark and it spluttered half way up the other side of the hill, you would probably pedal your head off or dismount and run alongside to keep the engine from losing heart. You would then drop a pedal or pick up a horseshoe nail for luck, or any other sharp article placed alongside the road for that purpose, and then sit down beside the road and proceed to make the air blue while you sandpapered the joint. It was a hard job in those days to get back home the same day unless you 'looped-the-loop' around your own house.

"Today, with our modern motorcycle, we start the engine on the stand and start out with as little concern as does the owner of the highest priced four-wheeler. Our 3-inch tires, double brakes, two-speed gears, tandem attachments and cushion frames have placed the rider in a position where his own indiscretion alone can be responsible for his non-arrival at his destination.

"We read of all sorts of uses to which the 'bus' is placed, such as doing the family washing, propelling a sled in the winter time, rounding up the cattle out West and grinding corn for the chickens. Speaking of chickens, reminds me of a habit they have over in Old England of giving names to their machines. I met a Johnny Bull the other day who said that he was going to name his machine 'The Hawk,' and when I asked him the reason for the poultry name, he said, 'Don't you know, old chap, it's out after the chickens.'

"The machines of today are as nearly foolproof as possible, yet you cannot expect them to run right if you are always 'tickling' the carbureter or if you tear it down and have enough wheels left over to build an Ingersoll watch. If you are dissatisfied with your 'hack,' take it to the nearest agent of that machine, tell him your troubles and see if the machine or yourself needs a new set of brains. Don't knock the machine and don't let the machine knock itself. Better good, slippery oil at a dollar a gallon than a new crankcase for $15 or $20. Always see that your tank or, rather, the tank of the motorcycle, is full of gasoline, as they never did run well on a mixture of air and rusty water. Be sure that the spark plug does not look like a charcoal filter and that the magneto wires do not have more than fifteen holes in them.

"If you intend to take a ride through the country districts, do not fail to take along a generous supply of matches, as it is a simple matter to bump a chicken and have a nice mud roast. Be sure to save the feathers, as mixed with glue they make an excellent filler for inner tubes.

"Great care should be used while going through cattle-raising districts, as you might hit a pig and put your 'bus' on the hog. If you are approached when nearing any small hamlet by an individual wearing a tin star on his breast, or some other place, you will know that he is the town *constabul*. The best thing is to introduce him to your Five Brothers, as by so doing, you may save an Honest Scrap, a chase by Bull Durham or a hanging by Gold Rope. You may even get a trip in a hired express wagon, such as some of the members took last August down near Cleveland.

"I am afraid that I will get a 'hot box' if I continue to 'burn up the road,' so I will 'plug up,' 'close my muffler' and leave the 'track open' to some one with more 'speed.'"

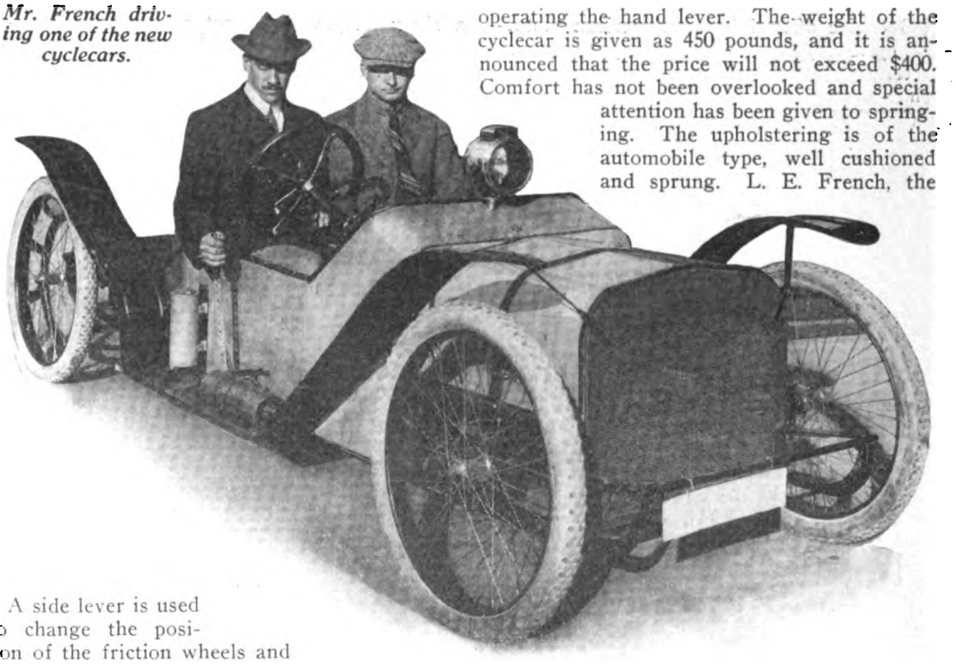
California Cyclecar an Attractive Newcomer

Company Just Organized in Los Angeles With Capital of $50,000 Will Build 10 Horsepower Machine With V-Belt Drive From Countershaft—Weight Is 450 Pounds and Price Will Not Exceed $400.

INCORPORATION papers have just been filed in Arizona by the California Cyclecar Company, of Los Angeles, Cal., the capitalization being $50,000. W. R. Norton, C. W. Hillyard, L. E. French, C. L. Cutter and W. M. Burke have been named as directors, and plans have been completed for a new factory building which will also embody an up-to-date salesroom. The first of the new cyclecar models was perfected some time ago and has given excellent service over California roads. In and about Los Angeles it has aroused much interest and the manufacturers are confident that there will be a wide demand for the machine.

The lines of the California cyclecar are low and an underslung frame is used, the clearance being nine inches and the wheelbase 102 inches. The motor is set across the frame, with a starting handle in front. A 12-inch cooling fan keeps the air circulating over the cylinders of the 10 horsepower engine, which has a displacement of 70 inches. From the motor the power is transmitted to the countershaft by a shaft and friction wheels, and the drive is then carried to the rear wheels by two 1¼-inch V belts. A convenient side lever is provided by means of which the rear axle can be thrown forward or backward. When moved forward the brake is applied and in the backward motion the belts are tightened, thus permitting of considerable flexibility.



Mr. French driving one of the new cyclecars.

A side lever is used to change the position of the friction wheels and another lever provides for increasing the pressure of the friction plates. A foot brake is fitted and a foot clutch makes it possible to disengage the plates without operating the hand lever. The weight of the cyclecar is given as 450 pounds, and it is announced that the price will not exceed $400. Comfort has not been overlooked and special attention has been given to springing. The upholstering is of the automobile type, well cushioned and sprung. L. E. French, the designer of the cyclecar, is a mechanical engineer who laid the foundation for his experiments by a course in Harvard University.

SAVING THE TIRES

Expert of United States Company Tells How Water Will Cause Trouble and Advises Prompt "Doctoring" of Tire Cuts

IF every man who owns a motorcycle could take a day off and go through a big, modern tire plant he would discover that while rubber itself is the most effective watershedder known, it is absolutely imperative that all moisture be eliminated in pneumatic tire construction. Furthermore, these owners would realize the great importance of looking after small cuts in the tire tread and closing them when they develop. When water works its way beneath the tread and breaker strip and into the carcass of a tire premature deterioration is certain to follow.

"In building up the carcass of a tire out of frictioned fabric, which means heavy cotton cloth impregnated with rubber, we are extremely careful to use only thoroughly dry material," says C. B. Whittelsey, superintendent of the United States Tire Company's Hartford factory. "After crude rubber has been carefully washed and rolled into sheets of crepe it is hung in drying rooms where a high temperature is maintained and where every trace of moisture is removed. The fabric, likewise, is run over heated rollers to make certain that it is perfectly dry before being subjected to the frictioning process.

"When a tire is completed it is free from moisture on the inside and it remains so as long as the tread is in condition to perform its full duties. However, small cuts, caused by sharp objects in the roadway, are very apt to appear, even in a new tire, and through these openings water eventually finds its way to the tire carcass. In time this produces separation of the individual plies of fabric of which the carcass is made up, and the tire rapidly goes to pieces. Breaks in the tread also admit sand and dirt, which cause fabric separation.

"When a motorist discovers one or more small cuts in the tread of a tire he should close them at once. There are several special preparations for this purpose which can be easily applied after the cut has been thoroughly washed out. The expense amounts to practically nothing and the saving is bound to be great."

TIRE COMPANY INCORPORATED

EAST LIVERPOOL, O.—A contract for the construction of a plant for the Morgan & Marshall Co-Operative Rubber & Tire Company has been awarded to Kerr Brothers, of this city. The building will be 90 x 107 feet. Dr. R. J. Marshall, Mayor of East Liverpool, is president of the corporation.

BANTAS HANDLE THE DAYTON

THE Dayton motorcycle is now being handled in Sacramento by the Banta Cyclery, F. W. Banta and his mother, Mrs. L. Banta, being the proprietors. The firm has been in existence for several years but has only recently entered the motorcycle field as agent for the Dayton line.

H. CAMERON, the Indian agent in Sacramento has sold two Indian sevens to the Fish and Game Commission for use by deputies on their rounds in the southern section of the state. Several other states are following suit.

ADVERTISING MEN CONVENE

BALTIMORE, MD.—The advertising managers of two of the big tire houses are here attending the national convention of the Association of Advertising Clubs of America, which opened last Sunday, and will last throughout the week. They are E. C. Tibbetts, of the B. F. Goodrich Company, Akron, Ohio, and George C. Hubbs, of the United States Tire Company, New York. Both are down on the program for speeches.

THE BRANTFORD TWO-WHEELER

IN REFERRING to the new Brantford autocycle in the issue of May 29 the impression was inadvertently given that the machine was essentially a three-wheeler, while, as a matter of fact, the third wheel in the outfit is used simply to support a chassis built along sidecar lines. The vehicle proper is a two-wheeler of new construction, with special attention given to springing. It is being produced by Brantford Autocycles, Ltd., Brantford, Canada.

CORTLAND RACE MEET

AN attractive program has been prepared by the Cortland (N. Y.) M. C. for its annual Fourth of July race meet, and more than $200 will be distributed in prizes. The club recently requested "Happy Days" Pitman to act as referee and the veteran official will be on duty for the holiday events. Mr. Pitman officiated at a number of up-State meets last season and so impressed the clubs with his determination to give everyone an even break that he is in demand for this year's programs. Entries are now being received.

Attractive New Hawthorne Lighting Products

Bridgeport Company Has Perfected Ingenious Universal Bracket to Carry Both Lamp and Its Source of Supply and Will Also Market Complete Electric System—Big Factory Extension Planned.

NO device offered in the American motorcycle field of late is likely to arouse greater interest among students of illuminating problems than a universal bracket perfected by the Hawthorne Mfg. Co., of Bridgeport, Conn., and so designed as to permit of carrying both the lamp and its source of supply, whether generator, gas tank or storage battery. The extreme simplicity of the new bracket, combined with its remarkable adaptability, makes it one of the most interesting products of the House of Hawthorne, long noted for its ingenious contributions to the motorcycle lighting field.

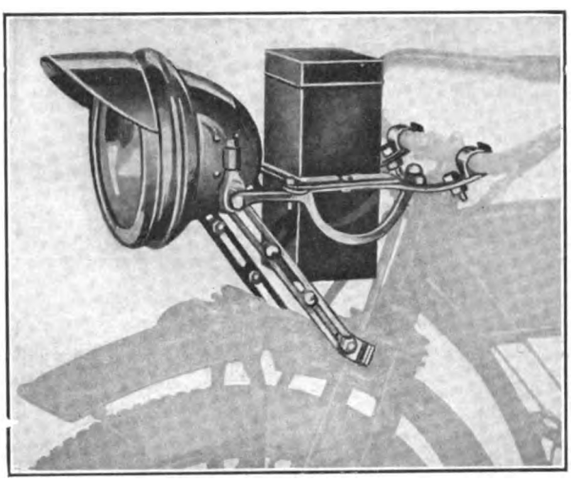
Probably the chief charm of the new Hawthorne product is that it does not confine the motorcyclist to any single form of lighting. It may be used for any of the three systems mentioned with equal facility, and without the necessity for tedious adjustments. The bracket is made up of two pressed steel members, formed with a semi-circular depression midway of their length, which is so gauged as to form a perfect cradle for a Prest-O-Lite tank. A pair of braces are pivoted to these members at their front ends and also clamped to the truss rods of the fork or to the fork sides, so that satisfactory rigidity is obtained without cumbersome fittings. The braces are slotted and keyed so that they permit of widely varying adjustments. A pair of smaller braces are pivoted to the rear ends of the main members and extended to clamps which are fastened on the handlebars.

The uprights, which carry the lamp itself, are held at the forward ends of the main members, and being pivoted they permit of tilting the lamp to any desired angle and thus using the beam to the best advantage under all conditions of travel. The pivot joint is of the tongue and groove variety, and is firmly locked by clamp bolts.

When the bracket is to be used with the gas tank it is accompanied by two retaining bands which complete the circle and hold the receptacle firmly when it is placed in the depressions above referred to. For use with a No. 5 Old Sol gas generator a plate is supplied, punched with a circle slightly greater in diameter than the generator and fitted on the under side with a simple and efficient locking device. The latter prevents the generator from working loose. This also bolts to the main members of the bracket. If a storage battery is to be carried, equally satisfactory arrangements are found. The improved battery box, which is offered by the Hawthorne company in connection with its new bracket, also fits into a punched plate between the main members. The bracket is easily adjustable in width so that no difficulty is encountered in accommodating battery-carrier, tank or generator, as the case may be. A special electric lamp is supplied with the battery outfit.

The latter comprises a six-volt Willard storage battery, mounted in a waterproof metal casing (the carrier above referred to), and an attractive torpedo lamp which carries a six-candlepower Tungsten bulb. Much attention has been given to perfecting the battery box, which is 3¼ inches by 4 inches and 9¼ inches in depth, and it is believed that it represents the last word in compactness and handiness. It is made in two sections, provided with flanges serving to join them together, and also to hold the box in place on the bracket plate. Two bolts with concealed nuts pass through the flanges and the plate. The box has a hinged cover which carries a concealed switch and a lock to ward off meddlers. The leads to the battery and the switch extend through a channel formed in the front of the box.

The 40-ampere battery will furnish light continuously for 20 hours, and the cost of re-charging is 25 cents. The box is finished in enamel to match the color of the motorcycle; battery and box weigh about nine pounds. The electric headlight



Hawthorne Electric Lighting Outfit

carries a short hood or "peak," which is designed to prevent light rays from being thrown upward so that they blind the rider, and is simple in general make-up. The cover is fitted with a special catch which is loosened by a quarter turn of the cover; to prevent its being easily taken off by meddlers a small set screw is provided.

An electric warning signal is also included in the Hawthorne electric system. It is of the electro-vibrator type and combines simplicity and efficiency to a remarkable degree. Very little current is consumed by the horn, although it is capable of producing a far-reaching sound. It is finished in nickel to match the lamp and is operated by a push button on the handlebar. In addition to carrying the lamp with its source of supply, and the warning signal, the Hawthorne bracket also provides an ideal mounting for the license plate. Provision is made for carrying the plate on the same auxiliary bracket that holds the electric horn. Thus the plate is out of the way and still discernible above the battery box.

Several notable improvements have been made in the Old Sol battery tail-lamp of late, one taking the form of a snap pin lock in connection with the red jewel. When this is once placed in position it will be impossible to jar the jewel from its mounting and lose it. A similar arrangement has been applied to the mica window through which the license tag is illuminated. The switch, which was formerly operated by turning a small key on the end of the battery case, now is operated by revolving the end of the case. In this way the danger of breaking the switch is reduced to the minimum. The switch is provided with an extra point so that the tail-light can be used with current from the storage battery, if the headlight is in operation, or from a small self-contained dry battery when it is desired to use the tail-light independent of the headlight.

The Hawthorne company is now planning for the erection of a seven-story building and it is understood that negotiations for the necessary ground are well advanced. This expansion has been necessitated by the remarkable growth of the firm's business of late. It is stated that its sales have doubled within the last year and that the proposed new extension, embracing about 100,000 additional square feet of floor space, will be needed to keep abreast of the demands for Old Sol products.

The Hawthorne company has fully covered its electric lighting system by patents, both on design and mechanical features, in the United States and foreign countries and announces that it will vigorously prosecute infringers. The company states that it will be ready to supply the electric outfit in quantities about August 1. One of the experienced motorcyclists who have been deeply and favorably impressed by the new system is John Constant, the amateur champion. Constant rode his machine to Bridgeport a few days ago and left it at the Hawthorne factory with instructions to equip it with one of the new electric systems.

JERSEYITES GO TO LAKE GEORGE

FOUR members of the Arrow Motorcycle Club, of Hudson County, N. J., who participated in the Decoration Day run to Newburgh, N. Y., continued on to Albany and Lake George. Returning they stopped at Schenectady, Troy, Rensselaer, Albany, Hudson, Poughkeepsie and Fishkill Landing. After crossing the Hudson from this point to Newburgh they went to Woodbury Falls, where they stopped for the night. In the morning they continued their trip home.

TO INCREASE OUTPUT

TWO large wings are being added to the plant of the Gordon Rubber Co., of Canton, O The additions will cost $25,000 and will make possible a considerably larger output.

AN ordinance has been passed in Alliance, O., requiring the licensing of motorcycles.

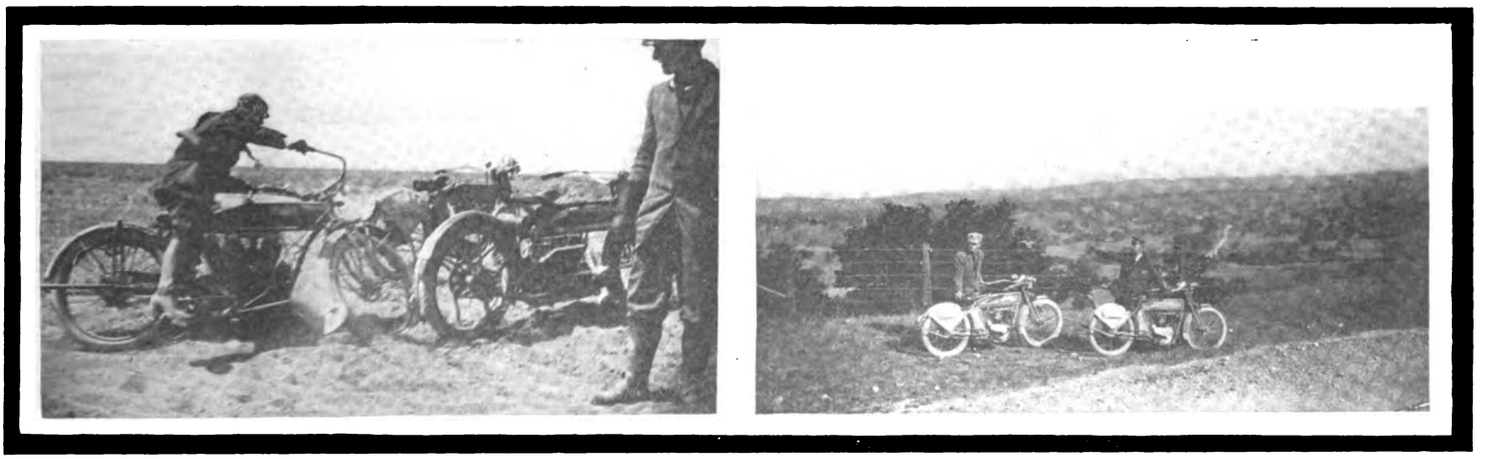
Thirteen Californians Survive Gruelling Trip



Striking Pictures of Los Angeles M. C. Riders Pathfinding for the May 30 Endurance Trial—Note Sand in Photo at the Left.

LOS ANGELES, CAL.—Twenty-three riders started on the three-day, 530-mile endurance run of the Los Angeles M. C. on May 30 and 13 of them managed to keep their scores clean despite "57 varieties" of trouble and more hard riding than most eastern clubs encounter in a whole season. There was comparatively little actual mechanical trouble, but all kinds of breaks resulted from the numerous spills and the heavy going. Bissett, mounting a Harley-Davidson twin, broke his frame 50 miles from Bakersfield, but propped it up and wired it together so that it carried him home for a perfect score. There were other performances almost as daring, and all in all the trial was the most spectacular ever conducted by the southern California club.

Following is the list of starters: R. D. Bissett, 8 h. Harley-Davidson; C. R. Wride, 7 h. Indian two-speed; Geo. P. Riddy, 7 h. Flying Merkel; L. T. Clarke, 9 h. Minneapolis two-speed; C. H. Bruck, 7 h. Excelsior; J. J. Leonett, 7 h. Indian, two-speed; Erwin Knappe, Indian; W. S. Bryson, 7 h. Flying Merkel; F. L. Johnson, 8 h. Harley-Davidson; H. Bosschard, 7 h. Indian two-speed; C. Smallcomb, 7 h. Yale; W. D. Price, Yale; Albert Leroy, 7 h. Indian two-speed with sidecar; J. H. Shafer, 7 h. Thor; A. J. Menegay, 7 h. Indian two-speed; W. C. Morrell, 4 h. Indian; W. M. Kuhn, 7 h. Indian two-speed; Ray Little, 4 h. Harley-Davidson; T. Johannsen, 7 h. Indian two-speed; E. S. Burford, 9 h. Monarch; H. E. Sexton, 7 h. Flying Merkel; R. L. Stanley, 9 h. Minneapolis; J. W. Vance, 7 h. Indian.

The thirteen perfect scores follow: R. D. Bissett, Harley-Davidson twin; F. L. Johnson, Harley-Davidson twin; L. T. Clarke, Minneapolis two-speed twin; C. H. Bruck, Excelsior twin; J. J. Leonett, Indian two-speed twin; Erwin Knappe, Indian; H. Bosschard, Indian two-speed twin; W. M. Kuhn, Indian two-speed twin; T. Johannsen, Indian two-speed twin; W. S. Bryson, Flying Merkel twin; H. E. Sexton, Flying Merkel twin; C. Smallcomb, Yale twin; J. H. Shafer, Thor twin.

Using Low Gear Does Not Increase the Power

YOU cannot get more power out of a motor than the motor will originally give out, no matter what the number of gear reductions or "speeds." Your partner's motor will probably give 6¼ horsepower for a short time when pushed to do so, but should be considered only a 5 horsepower single in the present case. The high speed gear ratio being 4¼ to 1, and the low gear ratio 8½ to 1, makes no difference in the horsepower of the motor whatsoever; only 5 horsepower can be obtained when either speed is used.

Your friend's statement is due to a fallacy current among those who are unfamiliar with a variable gear device, and possibly with mechanics. He thinks that because he has doubled his reduction that his power is doubled, but this is not the case. By reducing the gear ratio from 4¼ to 8½ to 1, he has *lost* power by driving through several gear wheels; he has lost time in transmitting the power of the motor to the rear wheel, and he has lost speed also. To offset these losses he has gained the ability to keep the motor running at such a speed that it will develop its full power and drive the machine up the hill or through the heavy sand, etc., which was not the case when the high gear was used. This is perfectly satisfactory under the circumstances, and the losses are overbalanced by the gain.

These conditions follow the simple law of mechanics that "A gain in power is obtained at the expense of a loss in time (or speed)." As it is only possible to get 5 horsepower out of the motor, let us assume, we keep up the power to its fullest by driving through a lower gear or "speed" and are enabled to take the hill, but at a reduced speed of the machine. To get this reduced gear ratio we must use more gear wheels than on the high gear ratio and these cause a slight loss of power when running. It must be remembered that an internal combustion motor develops its power according to the number of revolutions per minute that it makes, and that the faster it runs the greater the power it develops.

The variable gear or "two-speed" gear owes its existence to this law of mechanics. When the load is increased, as when driving up a hill, with the high gear the motor will slow down and not develop enough power to drive the machine. So the designers fitted the variable gear device with a lower gear permitting the motor to run fast and the machine to run slow and thus lose in time or speed to keep the power normal. But they did not increase the power of the motor at all, nor could they do so.

If there were no losses by using extra gear wheels, there might be something in the statement of your friend. Using the 8½ to 1 ratio would be *equivalent* to using a 10 horsepower motor with the 4¼ to 1 ratio, but at much less speed, for a 10 horse motor would develop much more speed at any time than a 5 single. It is difficult to see where any advantage would be gained by the statement that 11 horsepower was given off when the low gear was used, as it could not be proved in a test and anyone familiar with mechanics would smile at the idea.

MY riding partner has a five horsepower motor fitted with a two-speed gear which he says gives 11 horsepower when the low speed is in action. I am writing to have you explain this to me, as I cannot see how you can get more power out of a motor with the low speed than with the high speed. FRANK C. CHAMBERS.

AN OTHERWISE excellent race meet was marred by fatal injuries to Samuel Hickman, a spectator, on Decoration Day at the Luna Motordrome, Cleveland. G. Grimes, one of four starters, fell as the race was starting and while still riding at the bottom of the track. Hickman jumped over the rope and made a dash for the track to shut off Grimes' engine, when Burdon, another rider going around the bottom of the track, struck Hickman in the back. Hickman died half an hour later in a hospital.

Seventy-Nine Milwaukeeans Finish Three-Day Run

First Reliability Trip of the Milwaukee M. C. Brought Out 121 Riders, and Three Women Enthusiasts Were Among the Finishers—Only One Accident Was Recorded Although There Was Some Heavy Going on Second Day.

Number 1—Riders at Beaver Dam, with Miss Lillian Hauerwas in the foreground. Number 2—The stop at Sun Prairie. Number 3—Checking arrivals at Columbus, Wis. Number 4—Motorcyclists acting as road makers on last day of the tour.

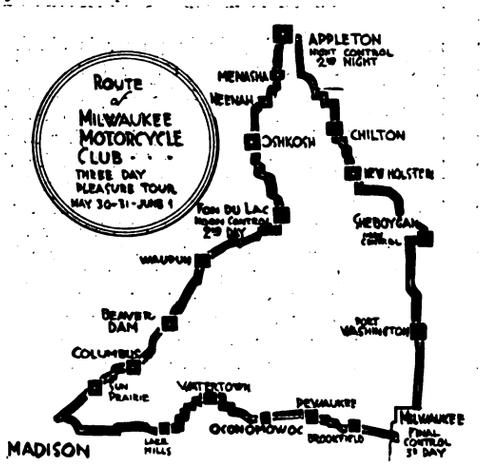
MILWAUKEE, WIS.—With conditions nearly ideal, the first annual reliability tour of the Milwaukee Motorcycle Club, under the auspices of the Milwaukee *Journal*, was held May 30 to June 1, inclusive. There were 121 participants and of this number 79 received medals for coming through with unblemished records. In the number of finishers the Harley-Davidson led all competitors, landing 28 winners, but the most consistent showing was made by the Indian. Of 17 entries, 17 finished with perfect scores, giving the Wigwam squad a percentage of 1,000. Additional finishers were the following: Excelsiors, 9; Reading-Standards, 5; Flying Merkels, 5; Yales, 4; Dayton, 1; Henderson, 1; Thor, 1. Several others who finished with clean scores did not register their machines, having entered at the last minute.

The run was an acknowledged success. It promoted a better social understanding among motorcyclists of the state and paved the way for good business for Wisconsin dealers. All along the route there were demonstrations and receptions and entertainments. Enthusiasm was manifested everywhere and the run truly lived up to the policy of good fellowship.

In all, 322 miles were covered in three days. The roads were in fair condition with the exception of bad stretches encountered on the second day. There were many minor troubles, such as bent and broken pedals, punctures, etc., but a supply car followed in the wake of the tourists and its crew did valiant work.

The start was made on the morning of May 30, from the St. Charles hotel, Milwaukee. At 7:30 the word was given and the whirring hum of the engines accompanied the exit of the tourists from the metropolis of Wisconsin. This first day's run was from Milwaukee to Brookfield, 13 miles; to Pewaukee, 19.7; to Oconomowoc, 33; to Golden Lake, 40; to Sullivan, 42; to Rome, 44.5; to Jefferson, 52.5; to Lake Mills, 59.5; to Oak Park, 66.1; to Vilas, 77.7; to Madison, 87 miles.

Three women riders covered the tour, making a strong showing the very first day by holding their own where others fell behind. Miss Margaret Lawler and Miss Lillian Hauerwas rode in Division C, while Mrs. James Heaps rode with her husband in Division H. None of them experienced any trouble on the tour.



The trip to Madison was uneventful except for one bad accident. Emil Held broke his leg when his machine toppled over on him on a bad piece of road near Nashotah. Tourmaster H. E. Jameson saw that he was given proper medical attention and accompanied the injured lad to his Milwaukee home. Jameson boarded the train for Nashotah later in the day, mounted his motorcycle and joined the tourists at Madison.

At Madison, the state capital, the tourists were guests of the management of the Madison Aero Club at an aviation exhibition and motorcycle meet. C. A. Carpenter, captain of one of the divisions, acted as referee. The first race for professionals was at five miles, in the 30:50 class, and was won by Aldrich on an Indian. Haley, Indian, was second and Stephens, Excelsior, third; time, 7 minutes.

The second race, at five miles for professionals in the 30:50 class, was won by Aldrich. Ferch, Indian, was second, and Haley, Indian, third. Ferch was one of the tourists and was given an ovation when he finished. Time, 5:40.

In the third race, at ten miles for professionals, Haley, Indian, took first. Stephens, Jefferson, was second, and Ferch, this time riding a Jefferson, finished third. Time, 10:54.

Nearly all the riders who started Friday were on deck for the start Saturday morning, May 31. Those who were obliged to return

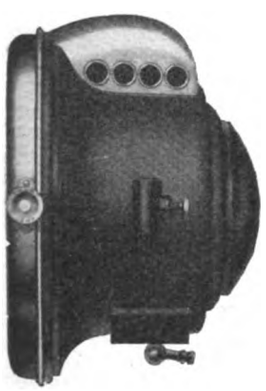
SOLAR LAMPS have not only a national, but an international distribution. Their marvellously dependable service, their low cost, their granite-like durability; all these features account for the world-wide demand for SOLARS. It has been necessary to establish a special export department to handle the rush of European orders.

Solars

"The Lamps with a Pedigree"

For the Dealer, the SOLAR line presents opportunities for quick, clean profits. The tremendous prestige of the SOLAR name creates interest. One glance at a SOLAR means a sale. One sale means another satisfied SOLAR "booster." The net cost of SOLAR LAMPS to the dealer is smaller—hence enabling him to turn over his money more quickly on a smaller initial investment.



"Grandad" Headlight
$7.00

Be you dealer or rider, you will learn the meaning of a truly efficient line of motorcycle lamps by getting our SOLAR book. It gives complete descriptions of our complete motorcycle lamp line. Be sure and get it today.

home to their duties on Saturday went back to Milwaukee by train, shipping their machines.

The worst roads on the trip were encountered on May 31 from Madison to Appleton. Plans were changed on this date and a rule was put into effect that any rider passing the chiefs of his division would be disqualified. On the first day the run developed into a race, with little or no line on divisions, and the result was that the tour was somewhat disorganized by the time Madison was reached. This was remedied, however, when Tourmaster Lacy Crolius issued an order which made it compulsory for riders to keep behind captains and lieutenants. In this way a semblance of order was maintained. The riders, too, were pleased with this plan.

The second day's run was from Madison to Sun Prairie, 11.7 miles; to Columbus, 27.2; to Beaver Dam, 39.5; to Waupon, 53.4; to Fond du Lac, 72. This was the noon control and the riders were a tired lot when they arrived there. After a hearty meal, the tourists set out for Appleton and maintained the itinerary as follows: Fond du Lac to Oshkosh, 93.8; to Neenah, 108.6; to Menasha, 109.8; to Appleton, total mileage for day, 116 miles.

Besides entertaining the tourists with a band, the Appleton Motorcycle Club did itself proud in other ways. Garage accommodations were furnished and the visitors were royally entertained in the clubrooms and escorted out of town Sunday by a squad of Appleton riders and mounted patrolmen. Appleton was certainly one of the bright spots of the itinerary.

Of the eighty-three riders who left Appleton June 1 for the return home, seventy-nine checked in at Milwaukee. The Rambler press car acted as pacemaker, and when the city limits were reached the seventy-nine riders were riding behind it. In this manner, well bunched and with horns sounding, the cyclists rode to the checking stations while hundreds of Milwaukeeans cheered them.

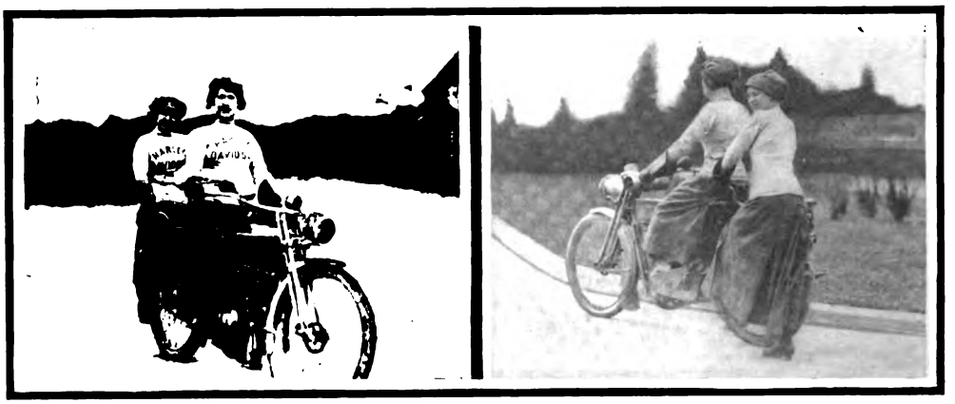
The run on the final day was as follows: Appleton to Sherwood, 11.5 miles; to St. John, 14.4; to Hilbert, 18.4; to Chilton, 26.1; to New Holstein, 33.2; to Kiel, 37.4; to Millhome, 41.2; to Ada, 44.4; to Howard's Grove, 49.8; to Millersville, 50.9; to Sheboygan, 61; to Port Washington, 90; to Milwaukee, 119 miles.

At Sherwood, the first adventure was encountered. Here the tourists got experience in practical road building. A culvert in course of construction necessitated a detour, involving crossing over a creek on a temporary bridge. The Rambler press car, in the lead, acted as pilot. The bridge gave way and the rear wheels went down. The boys found a wheelbarrow and some shovels left by the workmen, and a sand and gravel pile was promptly transferred to the temporary road. Then with the tourists heaving at her sides, pushing from behind and pulling in front, the car came out.

Roads were fair from Sherwood to Chilton, but from New Holstein to Howard's Grove there were bad places. However, all got through. From Howard's Grove into Sheboygan, the tourists were piloted by a squad of Sheboygan riders, who came out to meet them. The noon control was located here.

After dinner, all set sail for home. The roads between Sheboygan and Port Washington were very rough, but the rest of the way was almost a joy ride until a closed road was encountered near the Milwaukee city limits. A detour over a mean piece of gravel tested the riding abilities of many, but all got through. It was then a procession to the checking-out station in Milwaukee.

Regarding divisions, there were several banner ones. Captain E. J. Mueller started with nine men and every one checked in at the finish. Capt. C. A. Carpenter, of Division B, also started with nine men and brought them all in. Both the repair car, arranged for by A. G. Mueller, and the press car, driven by Frankie Roesler, were of great assistance to the tourists at times. The Milwaukee *Journal* will distribute fobs to the winners.



Mrs. James Heaps and Miss Leslie—Mrs. Heaps Finished the Milwaukee Run on Time

Service Staff of Consolidated Gas, Electric Light & Power Co., of Baltimore, Md.

ERECTING PITTSBURGH TRACK

PLANS for a five-lap board track in Pittsburgh have been completed. The track will be banked at 60 degrees. General admission at 25 cents will be to the infield, which will accommodate 15,000. In addition to this there will be 4,000 seats at 50 cents, and 1,500 at 75 cents. The bowl will be operated in connection with the American League of Professional Motorcycle Racing Clubs, and the opening meet will be held on June 25 if present plans do not miscarry.

A COMBINATION MEET

AUTOMOBILE and motorcycle races and a number of aviation events made up the program for the meet held at Baldwin Park, Quincy, Ill., on June 1. The program was arranged by the Quincy Motorcycle Club and more than 3,000 people witnessed the events. Henry Maching, riding an Indian, took first place in the 3-mile race for twin machines, while Oscar Kathmann, Excelsior, captured the 2-mile single event. Later, Kathmann, mounting a Merkel single, won handily from a Ford automobile.

HEINZ WINS ROAD RACE

EAST ST. LOUIS, ILL.—The East St. Louis M. C. recently opened the local racing season with a road event to New Athens, a distance of 60 miles. Despite the fact that the roads were in bad condition the riders maintained a fast pace all the way. C. E. Heinz, on a Yale twin, took first place, with T. Calahan, riding a Harley-Davidson twin, second, and Charles Hendricks, on an Indian, third.

TRIBUTE TO MOTORCYCLES

IN A recent number of the *Gas News*, a booklet issued by the Consolidated Gas, Electric Light and Power Co., of Baltimore, Md., appeared the picture which is reproduced herewith showing a line-up of the company's service staff on motorcycles. The machines have given excellent returns and the lighting officials are deeply impressed with their adaptability to general commercial service. The picture is forwarded by Howard A. French & Co., Indian agents in Baltimore, from whom the machines were purchased.

MOTOR SHOW AT LONG BRANCH

PLANS have been completed for an automobile and accessory show to be held in the Ocean Park Casino, Long Branch, N. J., June 30 to July 7, and it is the understanding that space can also be obtained for motorcycles and supplies should dealers in the vicinity care to be represented in the exhibit.

America's Foremost Motorcycles use the Bosch Magneto

Black Hawk	Excelsior	Jefferson	Pope
Dayton	Harley-Davidson	M. M.	Reading-Standard
De Luxe	Henderson	Merkel	Thor
De Luxe Engines	Indian	Minneapolis	Triumph
Eagle	Iver Johnson	Michaelson	Yale

This list of manufacturers comprises America's most prominent motorcycle manufacturers. No other ignition system in the world can show a list even 1/8th as representative.

These makers have selected Bosch and used Bosch, some of them for over seven years, because they knew Bosch was unquestionably superior in accuracy, reliability and efficiency. They are positive that Bosch is as dependable as their own product.

Be guided by the judgment of America's foremost motorcycle designers. Select a Bosch-Equipt motorcycle and enjoy that priceless confidence and satisfaction that make motorcycling worth while. *Write for special motorcycle magneto book.*

Every Machine Not Equipped With Redmond Foot Rests Means a $5.00 Sale For Live Dealers

Every rider wants foot rests on his machine. The desire is so strong that all you need to do is to show a man a set of Redmond Foot Rests to make a sale. Redmond Foot Rests are easily attached without the aid of tools. They fit all machines. For class and comfort no device is so desirable as

Redmond Foot Rests

These rests are made of the best grade aluminum. Thus they are light and strong. They have corrugated surfaces to hold the feet. The arm is of crucible steel and the clamp so arranged that rests can be made secure at any angle. Redmond Foot Rests retail for the low price of $5.00. Write us today for dealers' proposition; it's a winner. Write quick, so as not to miss any sales. Riders, see Redmond Foot Rests at your dealer's or write for circular.

HARRIS SUITS SUCCESSFUL

TWO suits recently instituted by the A. W. Harris Oil Company, of Providence, R. I., for infringement of its trade mark and improper use of the name "Harris" in connection with other lubricating products have resulted in perpetual injunctions restraining the offending parties. One of the suits was brought before the United States Court for Indiana against James C. Harris, who has been operating under the name of the "Harris Oil Company." The court's decision forbids him to use his own name in connection with the oil business, except with certain definite restrictions.

The other suit was brought against the Parker Refining Company, in the United States Court for Ohio, and resulted in a perpetual injunction directing that company not to advertise or sell "Harris Auto Oil," or to use the name "Harris" in relation to oils.

The A. W. Harris Company stated in the suits that it has used the name "Harris" in connection with the oil business since 1885 and that the name has acquired a reputation both here and abroad as denoting the products of the Providence company. The court entered a final decree that the letters of registration of the name "Harris" were good and valid at law and the injunctions followed.

NEW PRESIDENT CHOSEN

HENRY C. M. THOMSON, of New York, has been chosen by the directors of the American Hardware Corporation to succeed Col. C. M. Jarvis, who resigned from the presidency of the corporation recently because of ill health. Mr. Thomson is treasurer and financial manager for Hoggson Bros., of New York City. Resolutions were drawn up expressive of the confidence and esteem in which Col. Jarvis is held by the directorate.

DIRT TRACK SERIES

INCLUDED in the summer schedule of the Fort Wayne (Ind.) M. C. is a series of seven dirt-track race meets. The first of these meets was held on May 18. The series includes meets on June 22, July 13, August 10 and 31, September 16 (the opening day of the Fort Wayne Fair), and October 5.

ANOTHER ENTHUSIAST

A CLIPPING from a Milwaukee newspaper brings the news that Walter Davidson, of the Harley-Davidson Motor Company, has become the proud father of a baby boy. The important fact that the youngster weighs seven pounds was overlooked by the newspaper, however, and this information had to be obtained in a special bulletin from the Harley-Davidson headquarters.

A CORRECTION

IN THE issue of May 15 reference was incorrectly made to the "Star Electric Company" as manufacturer of the Samson electric motorcycle horn. It was the intention to refer to the American Electric Company, State and Sixty-fourth streets, Chicago. The latter firm produces the popular Samson horn in addition to a large assortment of other high-class specialties.

TWO of the latest club affiliations reported by Secretary Gibson are the Conneaut M. C., of Conneaut, O., and the Nashville M. C., of Nashville, Tenn.

SHAW ON GROSSMAN STAFF

GEORGE E. SHAW, well known in engineering circles, has joined the technical staff of the Emil Grossman Company, of New York and Detroit, as mechanical engineer. Mr. Shaw will circulate among the automobile, motor truck and motor manufacturers and will also participate in the mid-summer meeting of the Society of Automobile Engineers as technical representative of the Grossman Company.

MAKING MOTORCYCLE LAMP

COLUMBUS, OHIO.—The Pathfinder Lamp Company, successor to the firm of Bennet & Moore, with headquarters at 149 North Fourth street, is now making a specialty of motorcycle lamps and reports a lively interest in their new models.

E. & C. EXPANSION

FROM the busy headquarters of Ernest & Craddock, Fifty-second and Filbert streets, Philadelphia, Pa., comes the announcement that the firm has increased its capital and is now prepared to operate on a broader scale than in the past. An unusually brisk demand is being felt for the E & C spring tandem and the firm's ingenious chain idler, and it is understood that extensions will be made in the near future to permit of accelerating the production of these products.

TANDEM MANUFACTURERS UNITE

J. FRANK SMEDLEY, manufacturer of motorcycle tandem attachments, of Los Angeles, Cal., and the Motorcycle Attachment Company, of Pasadena, Cal., have consolidated. The company will continue operations under the name of the Motorcycle Attachment Company, with headquarters at 54 West Union street, Pasadena. The directors of the company are Edward Loudenclos and K. H. Miller, of Pasadena, and J. Frank Smedley.

LAST week the Motorcycle Exchange of Pittsburgh, Pa., received seven new 7 h. ported Indian racing machines for the new Pittsburgh Motordrome. The Motorcycle Exchange has received this week the fourth carload of 1913 Indians.

MEMBERS of the Chester M. C., of Chester, Pa., recently participated in a Sunday run to Atlantic City, N. J.

Worth-While Performances That Count for Something

Road runs, endurance trials, hill-climbing tests, these are the points in which the EMBLEM tries to attain honors, because we know that these honors are not empty ones. To circle a track at tremendous speed with a specially built racing model is no indication of a machine's ability to surmount every road obstacle, as has been done by the

EMBLEM

time and again. Its famous road runs during the shows last winter, its innumerable other triumphs, including Gale's recent epoch-making 600-mile ride between Angola, N. Y., and Boston, Mass., in 19 hours—its hundred and one other demonstrations of its power, speed, endurance, economy and all-around dependability—these are records that will go down into the annals of motorcycledom as representative of EMBLEM perfection—and they count for something!

SOLE AGENTS FOR THE FAMOUS INDIAN AND THOR

LOBDELL & McNEAL
MOTORCYCLES

ABERDEEN, WASHINGTON May 17th 1913.

Stoll Manufacturing Company,
33rd & Walnut Sts.,
Denver, Colo.

Gentlemen:

We are enclosing check for another of your Stoll Dream Tandems No. 1 with fittings for a 1913 Excelsior. Please let it come through by first express, as the customer is in some hurry. You have been very prompt in former shipments and we have no reason to believe that you will delay this one, and have expressed our haste in order to get as early shipment as possible.

Your Tandems are making a big hit here, and we are boosting them to the limit.

Please hurry this order and help us make another customer happy.

Very truly yours,
Lobdell & McNeal.

"THOR" MOTORCYCLES
Distributors for Utah

HARLEY-DAVIDSON MOTORCYCLES

Salt Lake City, Utah. 5/20/13

Stoll Manufacturing Company,
Denver, Colorado.

Dear Sirs:

I received your sample "DREAM" Tandem all O. K. It sure is a dream, but not as a seller for I hardly had it unpacked and placed on a machine before I had taken a half dozen orders; its the real thing as a seller, and for the real thing as an easy rider, it is the last word in comfort. It also gives a Motorcycle the real touch of finish that has been sadly lacking in other Tandems--and I have tried them all.

Riders all agree that the "Back Rest" as used on your Tandem is all that could be desired and gives the Tandem rider the feeling of security that is sadly lacking on other Tandems.

I feel that I can easily dispose of a hundred of these Tandems.

Enclosed please find shipping instructions on three dozen Stoll Dream Tandems to be shipped as soon as possible. I find that not only is it worth the price for comfort and easily handling qualities, which it gives the machine, but that it also lengthens the life of the tire and relieves the whole motor and the strains and streases which the ordinary tandem subjects the motorcycle to.

Wishing you success, I am

Yours very truly,
J. Louis Anderson

Stoll Mfg Co.,
Denver,
Gentlemen:
Stoll Spring Carrier #2 arrived and rides fine. We bumped the worst crosings in Butte and the boys say she is O.K. I rode on back myself and am satisfied. Skidded to avoid killing our milkman and bent a foot rest. It was easily bent back again. I thank you for getting out a combination that fill the bill. yours truly
H E. Buzzo
Walkerville, Mont.

...olorado.
Our order for three No. 2's complete was received a couple of days ago. We have tried a number of different attachments in the past two years and have found none to equal yours, not only in principle but the way they fit the machine etc. Your attachment is the first one of any make that we have not had to almost build over, they fit perfectly and the riders cannot speak highly enough of them.
Please ship by freight as soon as possible three No. 2's complete for 1913 Tourist Trophy Two Speed Indian motorcycle.
Very truly yours,
W. H. Eaton,
Helena, Montana.

For Quick and Convenient Handling

each length of "The Coventry" Chain will hereafter be packed in a handsome heavy yellow cardboard box. This method of packing will serve a two-fold purpose. First, it will enable the dealer to mail a set to a customer without repacking or delay of any kind. Secondly, the striking appearance of the box will invariably attract the most casual observer's attention and arouse his curiosity.

Of course the enviable reputation enjoyed by "The Coventry" Chains requires no aids of this nature to hold and bring trade. But it is only another instance of "The Coventry" thoroughness. "The Motor's True Mate." No empty words are these, but earned by "The Coventry" Chains' proven consistency in service.

"The Coventry" Chain

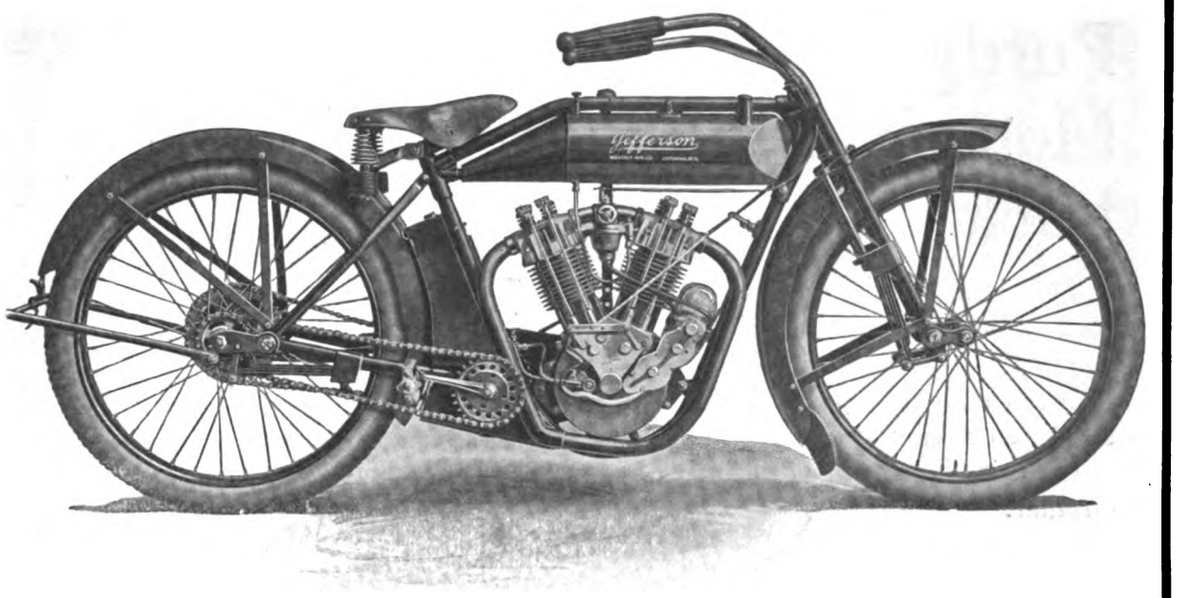
Handsome Is As Handsome Does



It's a beauty and no mistake, but don't judge by the looks alone. Note the automobile leaf springs, front and rear—the clean-cut powerful motor, with overhead valves, its perfect balancing. Note the absolute absence of superfluous parts, the simplicity of the grips, without clutch levers of any sort. Do you know what that stock motor can do, **without** special preparation or "tuning up" of any kind? Oh, only about 78 miles an hour! And without turning a hair. Yes, it's there with speed, but it's got service, too, in its make-up.

Our catalog tells the rest. Post a postal for it NOW.

Waverley Mfg. Co., Jefferson, Wis.

SUPREMACY

OF THE TWO-CYCLE MOTORCYCLE

PROVEN

conclusively and convincingly by the winning of the English Senior Tourist Trophy Race

Two years in succession by a two-cycle motor driven motorcycle. This race is the most important event in the British Isles and the world's greatest reliability test.

VALVELESS

Gives absolute and inexhaustible dependability for all around service. The tourist or boulevard rider can always be sure of a machine whose silence and smoothness of operation and ease of control are **matchless.** To know what it means to ride a motorcycle free from motor adjustments; to be sure that your machine's

Why Are Standard Products Invariably Specified?

Because years of conscientious manufacturing methods, coupled with an unusually high standard of quality, have built for STANDARD products an enviable reputation.

No manufacturer of any prominence but uses the

Diamond E Spokes and Standard Pedals

"STANDARD in NAME and QUALITY" are no empty words when applied to STANDARD PRODUCTS.

Diamond E Spokes and Pedals rank as the highest mark of perfection.

To liken a product to STANDARD is to bestow upon it high praise indeed.

The dealer who looks ahead will stock heavily with Standard Pedals and Diamond E Spokes and Nipples. The motorcycles that are not so equipped will invariably come to his shop for replacements and it is up to him to sustain his reputation for high-grade repair work by fitting Standard parts.

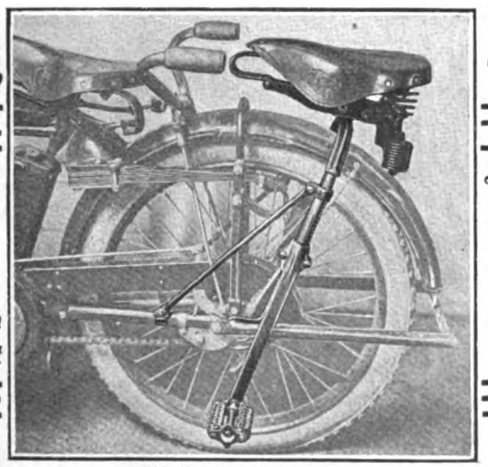
"E and C" Spring Tandem

Makes a Crony of old man Comfort



Makes every road a Boulevard

(Patent Applied For)

The "E & C" Spring Tandem is without question one of the strongest and most comfortable tandems ever built. It is especially designed for lady riders and will be found ideal for this purpose. Note carefully the following exclusive features:

1—Equipped with BOTH compression and recoil springs, absorbing all downward and upward shocks and vibrations.
2—Lowest possible saddle position—only 32 inches from ground to top of saddle.
3—Built of cast steel fittings and heavy-gauge tubing, and strongly reinforced at vital points
4—Has absolutely no side-sway, so common to most tandem attachments.
5—Equipped with handle bars, pedal foot-rests. Mesinger Standard No. 4 saddle. Nickel plate finish.
6—Pedal foot-rest leg made to swivel on tubing, which prevents snapping off in case of a fall.
7—Sold under guarantee of freedom from imperfections.

Confidence in Your Transmission

While the fact that a transmission is used by 90% of English chain driven motorcycles—that it is made by the maker of the first cycle chain ever built, that machines equipped with it have won the leading motorcycle classics in England time and again—while these facts are all true in connection with the

RENOLD CHAIN

it is the appearance of the chain itself that should instantly convince you of its reliability—of its marvelous strength. If you could see the stupendous manufacturing facilities behind the RENOLD CHAIN, the thousands of operations and inspections which it undergoes, you would understand *why* RENOLD CHAINS invariably deserve the confidence that is placed in them.

Our booklet, "Hints on Chain Drives for Motorcyclists," is free to every rider who sends in the name of his dealer.

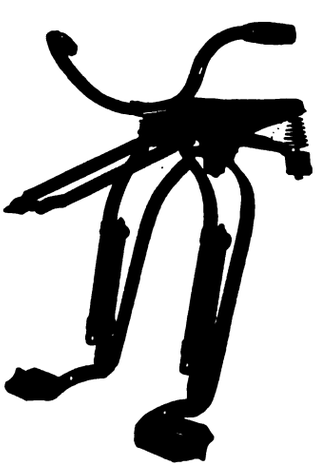
Simplicity—Comfort—Stability

The Empire Special

SPRING TANDEM



"IT FLOATS"

You wouldn't seriously consider purchasing a motorcycle that does not possess at least these three cardinal points. Then why permit a tandem attachment to be fitted on your machine, that has not proven to your complete satisfaction that it possesses these three characteristics in full measure? Here is

The Empire Special Spring Tandem

"IT FLOATS"

There is nothing about the Empire Special to get out of order. Simplicity is the keynote of its construction.

By a peculiar and ingenious invention, for which patents have been allowed, the Handle Bars and Pedals are caused to float with the saddle, insuring the maximum of comfort and smooth riding on the roughest of roads.

The famous Kelly No. 10 Adjustable Handle Bars are fitted on all Empire Specials.

Constructed of steel and no malleable parts, the Empire Special is practically indestructible.

Ask your dealer for our booklet. If he hasn't it, send us his name and you'll get one by return mail. The Empire's proof of superiority is in it.

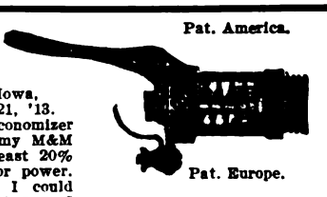
READ WHAT THE OWNER OF AN M&M MOTORCYCLE WRITES!



Moller Bros., Phila., Penna.

Inwood, Iowa, May 21, '13.

Gentlemen: I received your M&M Economizer and have given it a thorough test on my M&M Motorcycle. I find that it saves at least 20% of gasoline, and it surely is a help for power. Before installing it on my machine I could scarcely climb any kind of a hill, but now I can follow the rest. I would not be without it for twice the price if I could not get another one. It keeps my engine cool at all times, and I am certainly pleased with it.

Yours very truly,
(Signed.) TOBIAS SEVERTSON.

The M&M can be applied to any motorcycle on the market. It requires a ¼" pipe tap to insert into manifold. IT IS GUARANTEED TO SAVE FROM 40 to 50% of gasoline, and INCREASE YOUR SPEED AND POWER 20% with less gasoline and less carbon. With the throttle set at twelve miles per hour, by opening the M&M, your mileage will be increased to eighteen or twenty miles, WITH THE SAME AMOUNT OF GASOLINE, and LESS CARBON. PRICE OF THE M&M ECONOMIZER—$1.85 PREPAID. WRITE FOR OUR CATALOGUE. BEWARE OF INFRINGEMENTS!

Afford Perfect Traction—
Prevent Slipping and Skidding

Mud, sand, slippery pavements or snow will not spoil your sport if you always carry **Weed Chains.**

Easily carried, as the small bundles they make in their canvas bags take so little room that they could be carried in your pocket, when not in use, without inconvenience.

Order them from your dealer or write Dept. B for particulars

Weed Chain Tire Grip Co., 28 Moore St., New York

WEED ANTI-SKID CHAINS FOR MOTORCYCLES

The Hagstrom Spark Plug

"It Shows What Your Motor Can Do"

No other spark plug brings out the true efficiency of your motor as does the Hagstrom. Its clean, crisp, sizzling spark finds every atom of charge in your motor's cylinders. It gives more power on less gasoline.

The porcelain and mica feature is an exclusive Hagstrom idea.

The electrodes are genuine imported "Meteor" metal—so expensive that few plug makers are using it.

The "Hagstrom" is the regular equipment on 1913 "Yales"—"Marvels"—"Indians" and "Velies."

Your dealer has them or will get them for you.

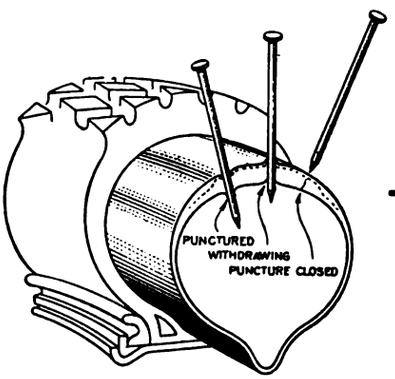
BARCO BRASS & JOINT CO., Chicago



Brown Scientific Non-Deflating Pneumatic Tube

AN AIR-FILLED MOTORCYCLE TUBE POSSESSING VERY UNUSUAL FEATURES:

First: It withstands a tread puncture without deflating the tube.
Second: The higher the pressure the tighter the puncture closes.
Third: It eliminates the risk of destroying casings by reason of punctures.
Fourth: The danger of loss of control of machine is removed.
Fifth: It assures you of not being obliged to repair a puncture on the road and gets you "there and back" on full tires.

AIR FILLED ONLY.

Punctures are self-closing by reason of a scientific but simple principle of construction.

At Last—A Real Motorcycle Spark Plug!

MADE OF HEAT DEFYING, PERFECTLY INSULATING PORCELAIN—AND DESIGNED FOR MOTORCYCLES ONLY

No need any longer to use the inferior mica plug or a makeshift porcelain. This new Motorcycle Standard Spark Plug, built by the greatest manufacturer of spark plugs in the world, gives motorcycle riders a plug with a porcelain insulator that is faultless, defies heat and insures perfect ignition.

MOTORCYCLE STANDARD SPARK PLUG—$1.00

Leading motorcycle engineers of the country have pronounced this plug right in principle and construction. The length over all is 2¼"—just the right size for the limited dimensions available for a spark plug in the motorcycle motor. The porcelain is made in our own potteries. Heat cannot crack it. The bushings are case hardened. The terminal nut will take ordinary wire, ring, or special "Indian" terminal.

Comes in half-inch or metric sizes. Your dealer will supply you—or sent prepaid on receipt of price and size. Our guarantee—"Your money back or a new plug, unless you are absolutely satisfied."

Of Course, Gale Used the Spartan V-Belt on that Wonderful Ride!

Gale has done it again! That indomitable rider, with an extra passenger, left Angola, N. Y., Thursday afternoon, May 15th, making Boston in 19 hours, an average of a little more than 31 miles an hour! And, of course, his transmission was the SPARTAN V-BELT.

Picture to yourself the terrible punishment the transmission went through on that record-breaking ride. Six hundred miles of continuous "road bucking"—through a driving rain storm—over roads hub-deep in mud—up steep winding hills—always with unabated, unflagging speed—these are the conditions through which the SPARTAN BELT came triumphant, with Gale's laconic praise, "No trouble at all."

The epoch-making performance has proven beyond the slightest shadow of a doubt what we have consistently maintained:

That SPARTAN BELTS are not only quiet, comfortable, economical, trouble-proof, non-wearing on motor bearings and gears, but they are absolutely immune to *any* and *all weather conditions.* Their secret tannage absolutely protects them from cracking, stretching or slipping.

SPARTAN BELTS, we say, again, have conclusively proven that they are anything but a "fair-weather" transmission. They have forcibly demonstrated their supreme fitness for *every* occasion, and they have once again brought to the attention of the riding public their flawless, consistently efficient SERVICE.

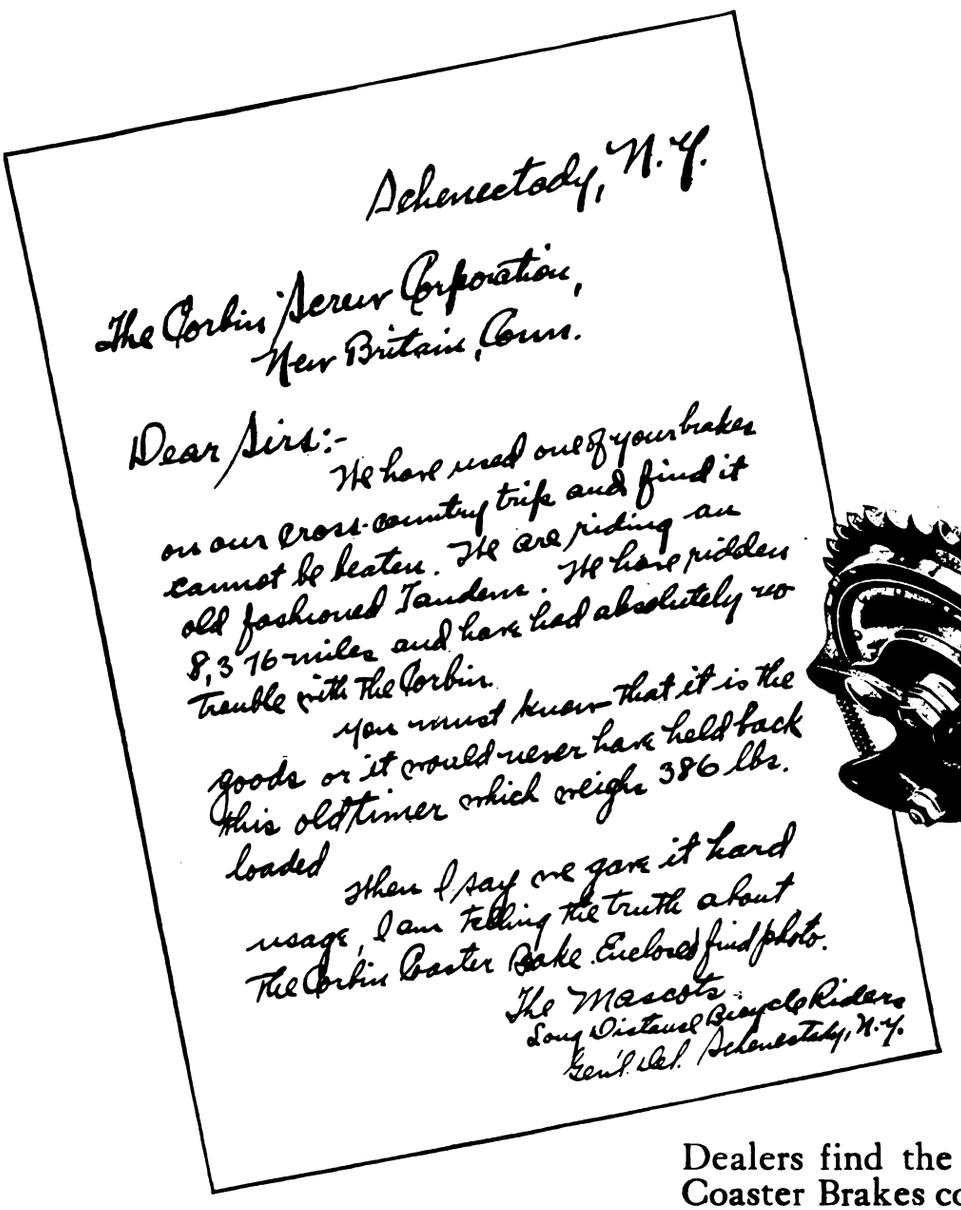
The Corbin Duplex Coaster Brake

Held Back This Old Timer Weighing 386 pounds loaded



Schenectady, N.Y.

The Corbin Screw Corporation,
New Britain, Conn.

Dear Sirs:- We have used one of your brakes on our cross-country trips and find it cannot be beaten. We are riding an old fashioned Tandem. We have ridden 8,316 miles and have had absolutely no trouble with the Corbin.

You must know that it is the goods or it would never have held back this old timer which weighs 386 lbs. loaded

When I say we gave it hard usage, I am telling the truth about the Corbin Coaster Brake. Enclosed find photo.

THE FASTEST AND MOST POWERFUL STOCK "TWIN"

The Pope "Twin" has all kinds of excess speed and power. It will carry you along at a faster clip than any other stock machine. Motorcycle experts of wide experience who have given the POPE "TWIN" a good tryout call it unquestionably the MOST POWERFUL MACHINE of its type.

Only the other day a prominent accessory manufacturer bought a Pope "Twin" on account of its great power for use in testing out his apparatus. In action the Twin's wonderfully powerful overhead valve motor will drive the machine anywhere at a tremendous rate of speed.

POPE, MODEL L
SPEED—OVERHEAD VALVES—POWER

Carrying out our policy of making improvements as we go along, we are able to announce the following:

NEW CAMS—Designed to produce the speediest twin cylinder machine on the road and a demonstration of the improved Pope "Twin" will convince you that we have succeeded beyond all expectations.

CUT-OUT—All Pope "Twins" are now equipped with convenient muffler cut-outs.

FOOT-RESTS—We are now furnishing comfortable foot-rests on all Model L's as part of the regular equipment, along with pedals.

COUNTY POLICE BUY EIGHT POPE "TWINS".

Eight Pope "Twins" have been purchased for the use of the police of Fulton County, Georgia. Largest single order ever placed in Atlanta.

A FEW RECORDS SHOWING HOW THE POPE "TWIN" PERFORMS IN ACTUAL SERVICE. 100 PER CENT. RELIABILITY.

Atlanta Hill Climb.
First in big amateur event. Only Pope Twin entered, was just taken from crate.

Southampton, L. I., Endurance Run.
Two Model L's entered and were actually the fastest on 225 mile run over bad roads. Checked in perfect and on time at every control from start to finish.

Milwaukee Journal Endurance Run.
A "Twin" and a Model H entered. Both awarded perfect score medals.

Model L, "Twin" 7-8 H. P..... $250.
Model M, 5 H. P. (Chain Drive)..... $215.
Model K, 4 H. P. (Belt Drive)..... $200.
Model H, Lightweight..... $165.

(Five Out of Six Are Stewart Equipped)

Stewart
Motorcycle Speedometer
With New Two-Belt Front Wheel Drive

$12
(Complete)

75-mile speedometer; 100,000-mile season odometer. 100-mile trip register, which can be readily reset to any tenth of a mile without disturbing total mileage of season register; front wheel two-belt drive, complete with pulleys and brackets.

WHEREVER absolute accuracy is required in motorcycle speed and mileage records, there you will find the new Stewart two-belt, front wheel drive speedometer. Watch the next hundred speedometer-equipped motorcycles you meet. Over 85 per cent. of them will have the new Stewart instrument.

The Stewart motorcycle speedometer sprang into almost instant favor—because it is the only *simple, practical* and *reliable* motorcycle speedometer ever made. Police departments of nearly every large city designate the Stewart as equipment for their motorcycles. Many motorcycle clubs throughout the world have declared it the standard instrument for club runs. In competitive touring and in racing it is recognized as the official speed and mileage recorder.

Mounted on the front extension spring or mudguard, directly before the rider, the Stewart is easily read. At night the rays of the headlight strike full on its face.

It is weather and trouble proof. The belts are of coiled steel piano wire. They cannot stretch in wet weather or shrink in dry. They automatically take up every road shock or vibration before it can possibly reach the instrument. They cannot jump out of the steel and fibre pulleys in which they run.

The Stewart Speedometer Factory
1942 Diversey Blvd., Chicago, U. S. A.

Here is a better brake than you ever expected to get

Do you suppose that the combined strength of these two heavy draught horses could hold and stop your machine?

Of course it could.

The New Departure Motorcycle Coaster Brake is even more powerful and gives you the same retarding effect at the brake drum as would the pulling of these horses against your motor and momentum.

This is not a fantastic statement, but a fact; mathematically correct and proven in practice.

This brake is the same design as that employed in an automobile and more than adequate to the requirements of the highest powered modern motorcycle.

Please bear in mind that this picture is not an extreme demonstration. The lightest rider can exert a back pedalling force of seventy-five pounds. This small effort is compounded thirty times by the ingenious, strong, simple leverage mechanism of the new New Departure—in emergency cases, the retarding power of the brake is equal to that of three or four horses.

The brake can be applied gradually or instantly, but always releases instantly, will work in oil, **will not bind, wind or lock.**

Write for literature fully illustrating and describing this wonderfully practical motorcycle coasting and braking device.

The New Departure Mfg. Co. - - - Bristol, Conn.

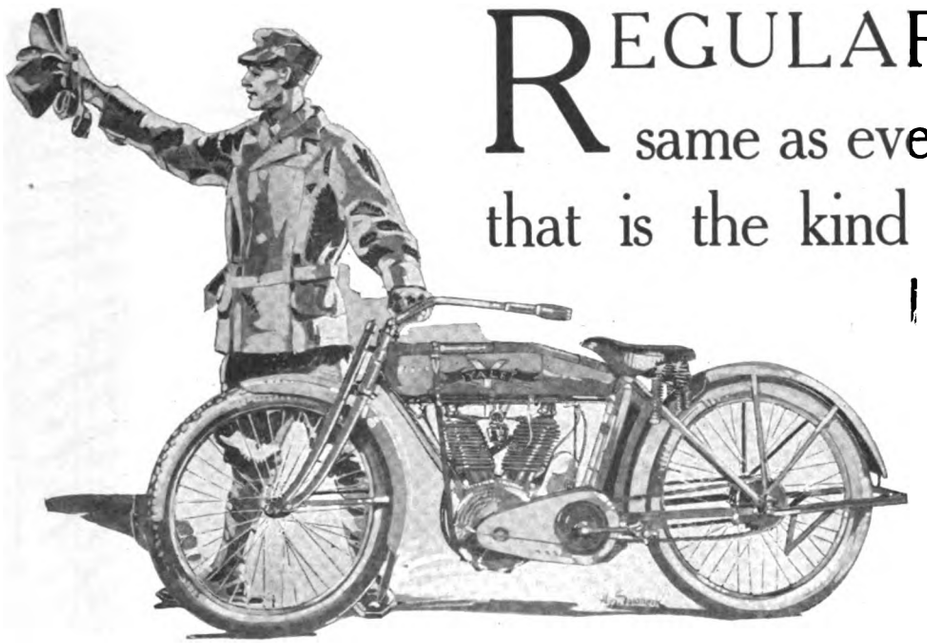
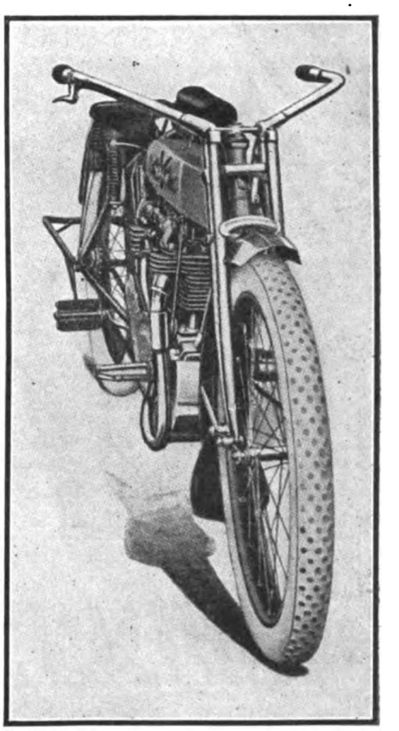
Just an Ordinary Yale



REGULAR stock Yales the same as every Yale dealer sells--that is the kind of machine that is winning so decisively in the big road contests this season, just as it won last year and years before. Every Yale has the ability that wins--"special" machines are not needed to bring victories, for the stock "Big Y" is built to succeed on the road, and it does it.

The annual Memorial Day 450-mile endurance contest of the New Jersey Club—the Yale has won every team contest held by this club for *four years.* Three Yales entered and two perfect scores in the Indiana 24-hour run, May 17-18—with only five perfect scores out of 32 other starters; a perfect score in the 530-mile three-day endurance grind at Los Angeles, May 30, 31, June 1—these are among the latest achievements that have made the "Big Y" the National Road Champion.



WITH the Yale you can always be among the winners. Our illustrated catalog tells why—send a postal and ask for it.

SPLITDORF

"Always There"

"It has the punch"—commented one of the best known motorcyclists in the country, after an exhaustive test of the new SPLITDORF MAGNETO, and his important judgment bears out what we know to be a fact and what we want every motorcyclist in the country to know to be a fact.

SPLITDORF MAGNETOS "have the punch," never fear—the punch that'll shoot a hot, fat spark into your motor as slowly as you can pedal the machine, or at top racing speed;

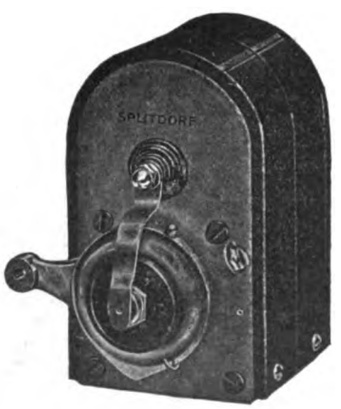
—"the punch" that'll make you master of the ignition situation under any call or stress of race or travel;

—"the punch" that'll "get you there" just as surely after thousands of miles going as on a boulevard or park jaunt;

—"the punch" that'll keep your motor purring merrily in the worst of road going, in rain and mud as well as in the blazing sunshine.

Oh, yes, SPLITDORF MAGNETOS have THE PUNCH to put poor ignition in the background for all time.

SPLITDORF MAGNETOS and the standard, reliable SPLITDORF COMMON SENSE PLUGS "are the goods."



Remember, all! "New ignition for old' is our slogan—we have a SPECIAL EXCHANGE proposition of the greatest interest to every owner of a gasoline motor who would save time and money. Write or call TODAY for particulars.

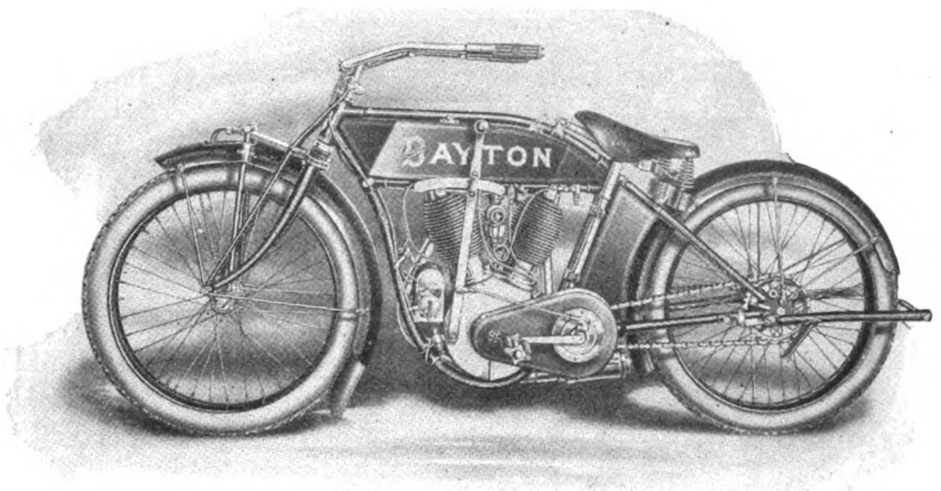
DAYTON



"Dayton" Means "Perfect Score"—Always

Invariably associated with the name "Dayton" is the thought "Perfect Score." It cannot help but be so, for the DAYTON'S invariably perfect performances in endurance runs, hill climbing tests, and various other trials have firmly welded its marvellous strength, power, reliability and endurance into the minds of the riding public.

Just By Way of Example

Take the two-state endurance run of the Maryland M. C. of Baltimore, Md., on May 30th. Through this gruelling road test, in which many machines came to grief, the Dayton team came unscathed, with a score of one thousand—perfect, as usual. Only one other team finished with a perfect score, out of a total of 90 starters. It's a habit with the Dayton. It would be a miracle with some other machines.

And Now-Mr. Dealer

We want an opportunity of putting our proposition before you in a complete form. We want to show you how Dayton publicity and Dayton perfection will aid you in establishing the leading motorcycle business in your locality. Write or wire for our proposition to-day.

Davis Sewing Machine Co.

Dayton, Ohio, U. S. A.

The Masterpiece of Motorcycledom!

Special "Black Hawk" Features That Make It the One Best Motorcycle "Buy"

Free Engine Clutch on inside of Rear Hub—instead of sticking out on side of machine or on engine shaft—absolutely protected—lubricated while slipping, so that wear and tear on engine and machine are eliminated—wonderfully durable multiple steel disc type.

Steel Oil and Fuel Tank Built Integral with Frame.—This permits placing saddle low without sacrificing either strength or "the lines" of machine—makes the "balance" of the "Black Hawk" wonderfully perfect, practically as precise as that of a chronometer—and this balance is responsible for the remarkably little vibration of the "Black Hawk" even under full power and top speed.

Exclusive Sight Feed Automatic Oil Pump—with only one moving part—cannot clog—oil flow increases automatically as speed of machine increases, the flow stopping when engine stops.

Here is **the** last word in motorcycle manufacture—the finished product of the greatest geniuses that ever designed a motorcycle, the acknowledged masters of the craft. This is the machine bound to break all motorcycle sales records—for it is admitted by all to be two years ahead of any other motorcycle on the market.

Get Aboard the "Black Hawk" Agency "Bandwagon"

Shrewd motorcycle dealers everywhere are hastening to secure "Black Hawk" agencies. They keenly realize that a motorcycle of such remarkable superiority cannot fail to smash sales records. They want their share of the big "Black Hawk" profits.

Open territories are becoming scarce. Those desirous of tying up to the best of all motorcycles should act at once.

WRITE TODAY

BLACK HAWK MOTOR CO.
Dept. B **Rock Island, Ill.**

"Black Hawk" Betterments That Are Boosting Sales For Our Agents

New, Remarkably Efficient Muffler.—Tested for 18 long months before made a part of the "Black Hawk"—hardly any noise at all on all ordinary speeds, although it entails only 2 per cent. loss in power as against a 15 per cent. loss with other mufflers.

Quickly, Easily Removed and Repaired Tank Fittings.—All fittings, being put into tank by special compression method, can be easily removed and replaced on the road, in case of accident.

Spring Forks and Seat Posts that Cannot "Bottom."—Experts everywhere agree that the unique construction used in the "Black Hawk" positively prevents all chance of forks or seat posts "bottoming" or breaking, no matter how severe the jolt.

What's Your Particular Tire Complaint?

Punctures? Rim-cutting? Cracking of tire walls? Excessive wear on tread or walls? Only Continental-Erie tire users realize that these troubles are **not** to be borne with patience and resignation, as "necessary evils." The marvelously accurate methods of construction plus materials whose durability and quality have been proven by years of study, research and actual **road experience** makes for an absolute absence of tire troubles in

Continental-Erie Tires

"The Tires of Greater Service"

Continental-Erie Tires have no spectacular track-racing records to their credit, and we are proud of it. But the hundreds and thousands of brilliant endurance records, transcontinental runs and other real tire tests have invariably brought out the "greater service" of Continental-Erie Tires. "ASK THE JOBBER, HE KNOWS."

NON-SLIP-LAG

To bring your belt up to the maximum of its efficiency and keep it there, Continental-Erie Non-Slip-Lag is the thing. It increases the life of the belt, prevents its tearing, cracking or stretching. It eliminates all slippage. Order a roll today from your dealer.

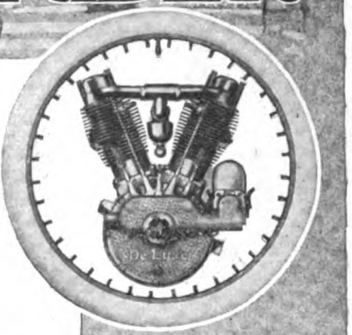
MR. MOTORCYCLE RIDER:



The joy of riding is enhanced when you ride a DE LUXE Motor equipped motorcycle.

Because there are four notable features of DE LUXE Motors:

SILENT CLEAN
FAST POWERFUL

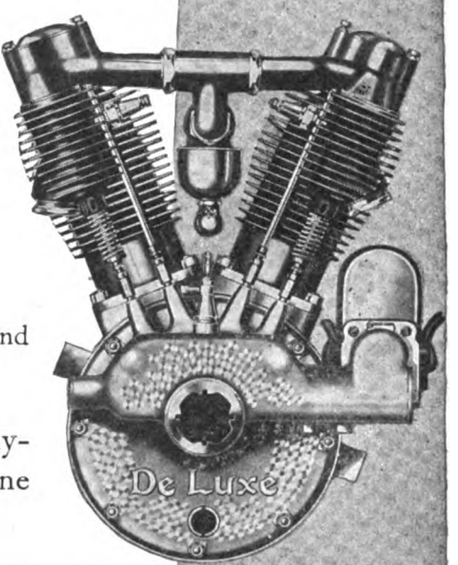
De Luxe Motors
The Heart of the Motorcycle

SO SILENT—that you almost forget that you have a motor running under you. It is like riding in a Pullman.

SO FAST—that you can pull away in an instant from any of your companions, and stay ahead of them.

SO CLEAN—that when you return from a run, your motor may be covered with gray dust, but will not look as if it had not been cleaned for a month.

SO POWERFUL—that you can climb the steepest hills and pull through the deepest sand, where others walk.



DE LUXE Motors have done more than anything else to elevate motorcycling to the high plane where no apology is necessary for it.

You cannot afford to be without these advantages, so choose a DE LUXE Motor equipped motorcycle and be a year ahead of the others.

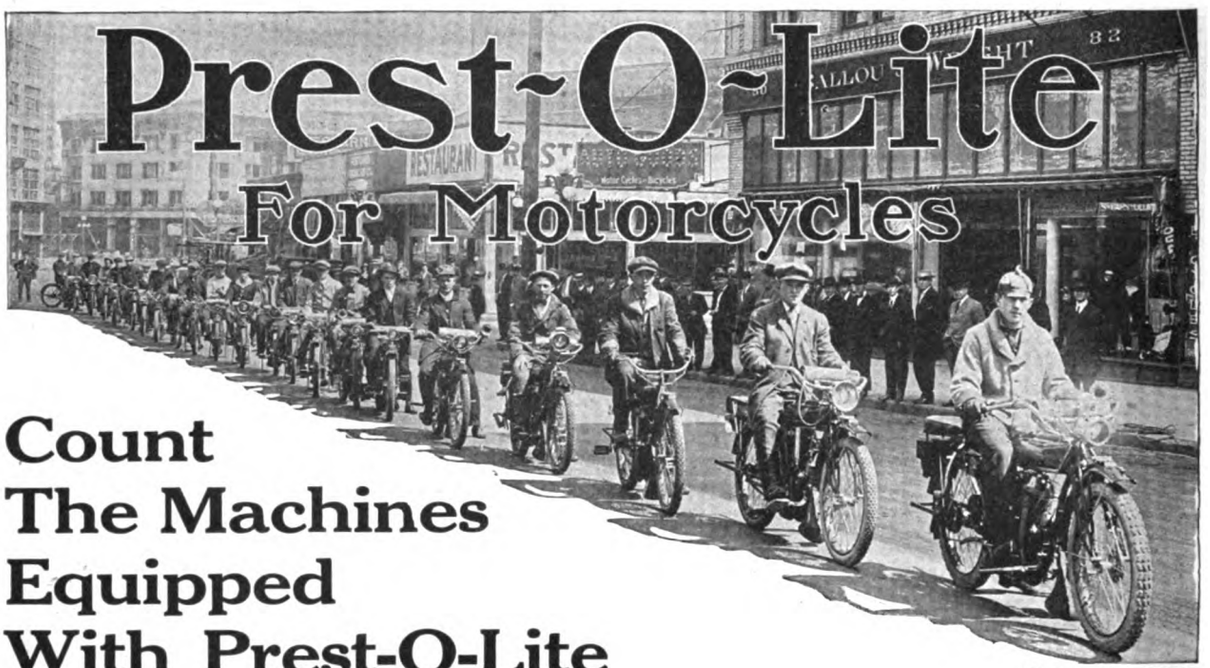
Prest-O-Lite
For Motorcycles



Count The Machines Equipped With Prest-O-Lite

Photograph courtesy Ballou & Wright, Portland, Oregon.

Here is a photograph of the Indian Riders' Club of Portland, Oregon. Their lighting equipment shows they are experienced motorcyclists. They know dependable light is necessary for riding at night. They have discarded the unsafe, unreliable systems for Prest-O-Lite. Prest-O-Lite is the mark of experience on the motorcycle.

Don't Depend Upon Failures or Experiments

The first and greatest features of lighting are reliability and economy. Before you consider buying *any* system of lighting for your machine get our free book—"Light on the Lighting Problem."

The real facts—proven by experience—show that no motor-driven or battery system can give light equal to Prest-O-Lite even at far greater cost.

Before you experiment—get the facts.

Write for the book today.

The Price, $10

Don't consider the price you pay for Prest-O-Lite as money spent—but as an investment. Remember that a genuine Prest-O-Lite never becomes second hand. It is in such universal use and demand that it can always be sold for about what you pay for it.

30 Days' Trial Free

We are so sure that you will find Prest-O-Lite indispensable that we make you this proposition.

Put a motorcycle Prest-O-Lite on your machine. Use it for thirty days and nights. Test it out on every kind of road, for city driving and country road work. Then if you find that you can do without it, the test won't cost you a cent. Can you afford not to make this trial?

To Dealers:

There are five times as many motorcycle Prest-O-Lites in use today as there was one year ago. Are you getting your share of this business?

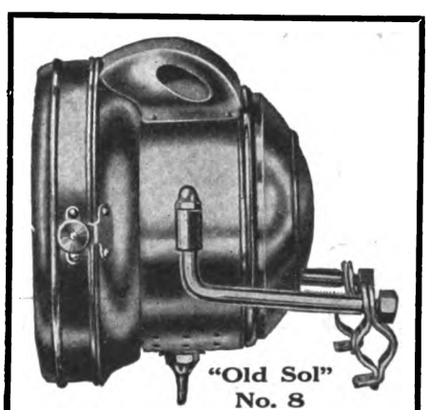
Five "Good Reasons" for "Old Sol" Supremacy

PRICE $5.50

The tremendous popularity enjoyed by the "Old Sol" line wherever lamps are used, can be traced directly to the remarkable efficiency, perfection of workmanship and durability of the five leading models shown here. They have **made** the priceless reputation of "Old Sol" lamps—the other models have **maintained** it. Designed, tested and **perfected** by experienced riders—small wonder that each "Old Sol" lamp leaving our factory gives supreme satisfaction.

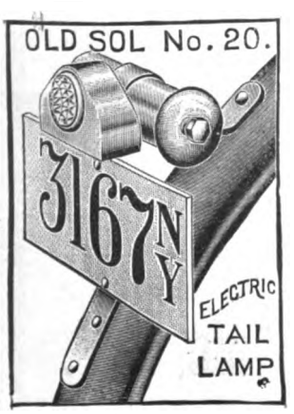
The head and fount of the entire "Old Sol" Line is No. 8—"Daddy." It is impossible to conceive of a gas lamp for motorcycles being more powerful in its light penetration, more handsome in appearance, more perfect in construction or more durable in service than "Daddy Old Sol." And it **is** impossible for us, with all our years of lamp manufacturing experience, to build a better gas lamp, from every viewpoint.



PRICE $6.50

Next in order of size and light penetration comes "Old Sol" No. 17, with a light penetration of 1,000 candlepower, 500 candlepower less than that of "Daddy." No. 17 is another powerful bulwark of "Old Sol" prestige. Its oversize lens, which is a feature of all "Old Sol" lamps, affords a remarkable flood of light for its size.

Then we have "Old Sol" Nos. 1 and 2, differing only in bracket arrangement, and remarkable for their compact, long-lived, consistent lighting service. For the rider who prefers a combined generator and lamp, "Old Sol" Nos. 3 and 4 (duplicates except for their brackets), give splendid satisfaction.



PRICE $3.00

Dealers—you cannot help but sense the pressing demand for "Old Sol" Lamps. The variety of models, the absolute maintenance of price, the wide range of selection afforded in the "Old Sol" line gives you unexampled opportunities for rapid-fire sales. Get our live Lamp Book. It's full of light.

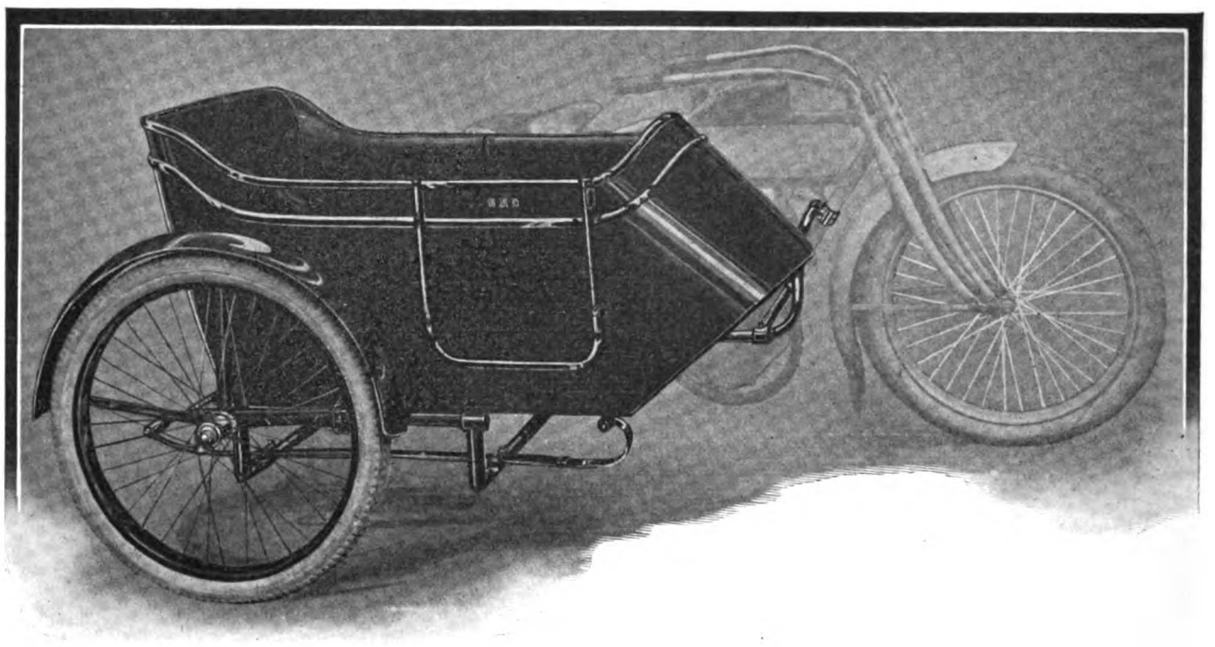
The New Autocrat $95.00



The Latest and Greatest Sidecar Sensation of the Year

AUTOCRAT

With Steel Body . . $95.00
With Aluminum Body $125.00

FOLDING CHILD'S SEAT $2.00

STORM APRON $3.00

Here is positively the classiest, raciest, strongest, lightest and best built sidecar in the world! That's saying a lot. But we can prove it.

This latest and greatest "AUTOCRAT" Model is of the highest grade automobile construction possible. It is built and finished with as great skill and care as a $6,000 automobile.

We're sidecar specialists. We make nothing else in the largest sidecar plant in America.

With an AUTOCRAT fitted with a child's seat and driven by a good motorcycle (a single will do—for the AUTOCRAT is remarkably light), you have a three-passenger combination, the equal, if not the superior of any automobile on the market. Your luggage goes under the seat.

Cars are enameled to match your motorcycle and beautifully upholstered in black. All tubing seamless steel—cold drawn. All fittings steel—weight and appearance of body the same, steel or aluminum. Attachments for every motorcycle. Special attachments for Indian, Merkel and Henderson.

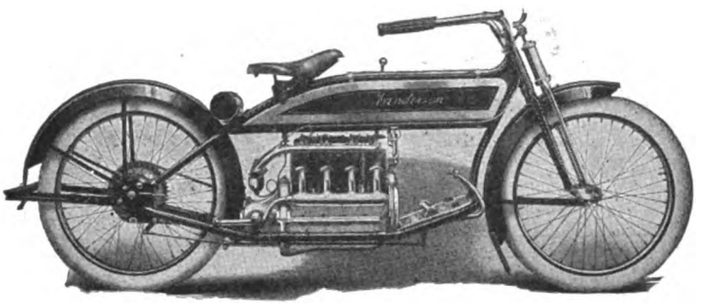
HENDERSON



4 CYLINDERS, 8 H. P., CHAIN DRIVE, 3-INCH TIRES **$325**

Tandem Attachment Complete, $25.

Four cylinders, smooth power; rides with no jerk or jar

The Henderson rider feels practically no engine vibration, and far less road shock than the average motorcycle sets up, because his is a four cylinder machine.

These advantages—and every motorcycle rider knows how important they are—come from the type of motor, the longer wheelbase, the lower center of gravity and the larger tires that distinguish the Henderson from the ordinary.

With four cylinders, the power development is two to four times more smooth and steady than with two cylinders or one.

It is more flexible, too, and the Henderson can be throttled to 5 miles an hour without releasing the clutch.

Hung low in the frame, the motor's weight steadies the machine; and the rider, placed well forward of the rear wheel, is comfortable on any road.

His feet rest in a natural position, his legs forward of the motor, instead of sprawled and cramped on pedals.

The Henderson owes its national popularity to these superiorities, which are well worth your investigation. Write for the catalog.

The R-S Guards the Nation's President

Models—

Twin, Chain Drive
$275

Tourist, Belt or Chain
$225

Service, Belt Drive
$200

On his automobile trips, President Wilson is invariably closely trailed by two motorcycle policemen whose duty it is to keep a watchful eye upon the nation's head to see that he comes to no harm. Obviously, their machines must be proof against any and all troubles. They must be fast—they must be silent. They must be clean-cut and graceful in appearance.

Is there any wonder that the R-S was chosen? What greater duty, what more responsible service can a motorcycle be called upon to perform than to guarding the President of the United States? Do you think the Washington Police authorities, who, by the way, use six Reading-Standards—chose the R-S haphazardly? Don't you think exhaustive experiments, merciless tests and keen investigations eliminated all other contenders for this high honor and left the R-S triumphant? That's understood.

Get our Art Catalog. It tells the rest of the story—the WHY of it.

Bulletin

On Decoration Day, at the Empire State Track at Yonkers, N. Y., an R-S Twin, John Cronan riding, won the ten mile amateur Race against six others. Time, 10:37. Next best time, 10:39⅘. Chalk up another for the R-S.

Simmons at Full Speed | Earl Armstrong | Armstrong Leading | Simmons Who Made Mile In 51 Sec. Flat

The Excelsior Reels Off the Miles While Others Stop to Catch Their Breath

The Excelsior is the fastest stock Motorcycle in the world. It has a certain "snap" and "punch" that just carries its riders in perfect safety to easy victory.

The best part of it all is that the EXCELSIOR **"always makes good."** You can depend upon that **absolutely and positively.** No other machine has a show when the Giant-powered "Ex" is on the entries. We back up our statements with pictorial proof and incontrovertible facts. The records below are of the races held at Portland, Ore. They are more than cut and dried figures. Please note these interesting facts:

In Race No. 6 the winning "Ex" was a special stripped stock. Motor made 5 miles in 4:40 from a standing start.

The fastest mile was reeled off in 51 seconds flat. This machine was used by Mr. L. C. Rose, president of the Excelsior Motorcycle Co., Inc., of Portland, Oregon, for 17,000 miles, and has never received the slightest bit of repairs outside of two new piston rings two days before the race.

The 5-mile professional 4 H. P. ported race was won by Mr. Simmons, a 180-pound man, on an "Ex" which ran 68,000 miles in actual service for the Portland R. L. & Power Company. And so it goes. Behind each "individual Ex" victory is a bit of interesting history.

Six "FIRSTS," One "SECOND" Out of Seven Races

THREE MILES, 61:00, PORTED	EXCELSIOR FIRST, SECOND AND THIRD.	TIME, 2:38½
FIVE MILES, 30:50, PORTED	EXCELSIOR FIRST.	TIME, 5:00

You won't have to "drop out" if you ride on

Diamond

"Safety (Squeegee) Tread Motorcycle Tires

—made of Vitalized Rubber—with Perfect 3-Point Rim Contact

Diamond Motorcycle Tires, both Safety and Studded Treads, are sturdy, staunch and strong—they will enable you to cover the most miles in the shortest time, with no tire troubles or tire tinkerings to spoil your day's sport.

Safety Tread

The Diamond Safety Tread Tire is the famous Diamond Automobile Tire adapted for Motorcycles. It won't slip—won't slide—won't skid—it *grips* and bites the pavement—it gives you sure control in every emergency and a heaping measure of mileage.

Studded Tread

The Diamond Studded Tread Tire is also a favorite with tire-wise riders. The Studs are large, clear-cut and a part of the tread. They will not chip or break off, they are tough, road-resisting and real ground-grippers. The "More Mileage Strip" of the Safety Tread tire is another exclusive Diamond feature that should appeal to the motorcyclist.

And you get the "More Mileage" Strip on both the Safety and Studded Treads

The Most Powerful Hill Climber in the World

Photographs shown above prove our emphatic declaration that the 1913 Flying Merkel has more power than any other motorcycle made.

In the upper left hand corner some idea of the steepness of the hill can be shown, the incline being so great that the rider was afraid to ride down.

In the center picture the Flying Merkel is shown on the steepest part of the hill (grade 37%). The Flying Merkel was the only machine able to carry another passenger all the way to the top.

The picture in the right hand corner shows one rider of a different make machine stalled and another rider about to stall.

The lower left hand picture shows a Merkel rider just going over the top of the hill while the rider of another machine, which stalled, looks on in amazement.

The lower right hand picture shows a 7 H. P. Merkel climbing a 25% grade hill pulling a tandem.

These photographs were taken at a recent Sunday run of the Los Angeles Motorcycle Club.

THE FLYING MERKEL

just last week won the big hill climb at Toronto. The 1913 Flying Merkel with sidecar attached was compelled to go against every well known make of American, and a number of British machines. The most remarkable part of it is that the Merkel used the regular stock gear, while other machines were geared low, especially for this climb.

Sunset Ramblers Warmly Welcomed All Along Route

Los Angeles Squad Simmered Down to Thirty-Three Starters, but Fine Ten-Day Program Went Through Just the Same—Banquets, Receptions and Races Among the Features—How Divisions Were Made Up

SAN JOSE, CAL., June 22.—Quite a few riders who had counted upon making the Sunset Ramble with the Los Angeles Motorcycle Club found it necessary to change their plans at the eleventh hour for various reasons, and scores of others withdrew in the belief that their machines would not be able to climb some of the rather tortuous grades on the route. As a result only thirty-three enthusiasts pulled out of Los Angeles for the ten-day journey on June 16, but this squad made the most of the trip to San Jose. This city gave the Ramblers a warm welcome.

The reception given the squad in San Jose was a very pleasant climax to a series of entertainment programs in honor of the tourists all along the route. Special arrangements were made to greet the travelers in every town of note at which they touched, and at several points there were races to enliven things.

Although the number of Ramblers was smaller than had been expected, the Los Angeles Club proceeded with its plans with as much enthusiasm as if there had been a thousand riders in the party, and on all sides there were congratulations upon the manner in which the project was arranged and carried through.

Charles Fuller Gates, who had made the pathfinding trip for the Ramble, acted as tourmaster, with Charles E. Wride as his hustling assistant. There were five divisions, three for motorcycles exclusively, one for automobiles and the last for the trucks carrying supplies and equipment. The first division was made up of tandems, as follows: Captain N. W. Kimball (L. A. M. C.) and wife, on two-speed Indian 7; A. H. Longley, Jr., and wife, on two-speed Indian 7; W. T. Ranft and wife, on two-speed Indian 7; Fred Everett and lady, on two-speed Indian 7; P. C. Taylor and wife (Bakersfield), Thor 7. Mrs. Daisy M. Meyers and Arthur E. Honor, mounting 2¾ Indian singles, rode with the tandemites to round out this division.

The second division, made up of single-cylinder machines, was as follows: Captain F. A. Martin (L. A. M. C.), on Harley-Davidson 4; R. M. Allen, Indian 4; A. J. Fallandry, Harley-Davidson 4; Edward Peterson, Flanders 4; L. R. Smoot, Minneapolis 5.

The third division was made up of twin-cylinder machines, ridden solo, as follows: Captain Charles Wride; A. J. Menegay, two-speed Indian 7; O. B. Bray, 8 h. M. M.; M. A. Bastrup, 10 h. Monarch; Walter G. Hill, Indian 7; F. L. Holland, Thor 7; Leo Owen (Pasadena), two-speed Indian 7; A. L. Tucker, Indian 7; C. Smith, Indian 7; J. H. Shafer, Thor 7; Alfred LeRoy, two-speed Indian 7 and sidecar. LeRoy has lost both legs and drives from his sidecar.

The automobile division included several cars and was captained by Charles C. Alford, who was accompanied by Mrs. Alford. Others in this division were Mrs. Paul Derkum, Mrs. Leo Owen and L. J. Berger. In the final division were the official baggage truck and the United States tire truck. The official truck was in trouble much of the time and fell behind the riders on the run to San Jose, but the United States tire squad was up with the divisions and the crew rendered valuable assistance at many points.

The itinerary was as follows: June 16, Los Angeles to Santa Barbara, 104 miles—noon stop at Ventura; June 17, Santa Barbara to Pizmo Beach, 103 miles—noon stop at Lompoc; June 18, Pizmo to King City, 83 miles—noon stop at Paso Robles; June 19, King City to Santa Cruz, 89 miles—noon stop at Watsonville; June 20, Santa Cruz to San Jose, 69 miles—noon stop at Gilroy; June 21-22, in San Jose at F. A. M. State convention and on side trips; June 23, San Jose to Monterey, 82 miles—noon stop at San Juan Bautiste; June 24, Monterey to Paso Robles, 121 miles—noon stop at Soledad; June 25, Paso Robles to Santa Barbara, 146 miles—noon stop at Santa Maria; June 26, Santa Barbara to Los Angeles, 104 miles—noon stop at Ventura.

There were banquets for the Ramblers at Santa Barbara, Lompoc, Pizmo, King City, Santa Cruz, San Jose, San Juan, Monterey and Alum Rock, and in addition there were balls at Pizmo and San Jose.

In their ten-day journey the tourists crossed the following grades or passes: Cahuenga (Hollywood); Calabasas, Conejo, Gaviota, San Julian, Purissima, Cuesta, Chittenden, Dumbarton and Foxin Canyon. These stretches imposed severe tests, but the machines behaved finely and the lady riders were the last to complain. On the second and third days there was considerable head wind, but despite this and the fact that several mountain passes and a number of fords had to be crossed, the party made excellent progress throughout.

Californians In Busy F. A. M. Convention At San Jose

State Commissioner Owen is Retained, L. H. Rolofson Becomes Secretary and Dr. C. H. Lashlee Continues as State Referee—Committees Are Appointed and C. F. Pixley is Chosen as Director

SAN JOSE, June 22.—There was plenty of enthusiasm as the riders and delegates, assembled in this city, gathered in the Chamber of Commerce headquarters this evening for the first annual convention of the State F. A. M. organization. President Pogue, of the local club, acted as temporary chairman of the convention and Charles Fuller Gates, who was in the city as tourmaster of the Sunset Ramble, was elected permanent chairman. L. J. Berger was made secretary. Contests over credentials lasted for some time, Delegates Sorenson and Berger arguing that the proxy votes should be thrown out. This would have given full control to the San Jose club, and other repre-

Digitized by Google

sentatives contended that this would not be fair to other districts in the state.

An appeal to the chair was lost and the proxy report of the credentials committee showed 256 members represented. At midnight State Commissioner Leo Owen, of Pasadena, had made his report and had been re-elected as head of the state body. The convention then adjourned to Sunday afternoon, when further business was taken up at the Alum Rock picnic. The Sunday session was a busy one. The San Jose club decided to vote full strength by delegates, instead of by individuals. L. H. Rolofson, secretary of the San Jose M. C., was elected secretary of the state organization and Dr. Claude H. Lashlee, of Redlands, was retained as state referee. It was decided that a State Constitution Committee of three be appointed by the State Commissioner, their recommendations to be submitted to a mail vote.

The resolution committee, composed of Delegates Powers, Kimball and Pogue, reported resolutions from the Western Federation of Motorcyclists relative to the proposed union with the F. A. M. at the Denver convention. Delegate Pixley, of Sacramento, moved that the resolutions be forwarded to the F. A. M. national assembly with the request that they be acted upon. A resolution requesting the Board of Supervisors of Santa Clara County to remove the speed restrictions to permit of the proposed automobile race on July 4 was adopted.

It was decided that the executive committee of the state organization shall consist of the State Commissioner, the State Secretary and the State Referee. The State Commissioner will be called upon to give a bond based upon the maximum funds to be handled. Plans were outlined for the taking of a mail vote upon all matters of importance, and it was the sense of the convention that the recall of state officials might be exercised if desired.

The annual convention for 1914 will be held not later than July 10. One hundred signatures will be required to nominate a town and a majority of fifty in the mail vote will be necessary to determine the scene of the assembly. The State Commissioner was authorized to appoint a publicity committee, of which he will act as chairman; a legislative committee, with C. F. Pixley as chairman; a committee on tours and hotels, with Paul Derkum as chairman, and a committee on roads. The convention passed resolutions calling for the immediate appointment of C. F. Pixley as director for California, so that he can attend the Denver assembly of the F. A. M. and aid in bringing about a compromise with the W. F. M. It was the sense of the convention that the resignation of Walter Collins as a national director be asked for.

President Hodges, of the Western Federation of Motorcyclists, and other prominent members of this organization attended the convention as spectators and later expressed the opinion that they would like to effect a compromise if possible. The convention resulted in better feeling on all sides. After the session at Alum Rock the delegates and other visitors hurried back to the city to attend the afternoon races.

REPORTS from England show that there are 2,095 motorcycles registered in Liverpool.

Lawrence Gibler, Yale Agent in Hillsboro, Ohio, Appears at the Left.

A SEVERE HILL CLIMB

Fresno Club Holds Contest on Famous Toll House Grade Which Has Some Startling 45-Degree Stretches.

ONE of the most severe contests ever held on the Pacific Coast was the recent annual hill climb of the Fresno Touring Club, of Fresno, Cal. The well known Toll House Hill was the scene of the climb. The grade is eight miles in length and is claimed to be at an angle of almost 45 degrees all the way. G. L. Epperson, riding an Excelsior, finished first in 13 minutes and 24 seconds. The best previous time made on this hill was twenty-two minutes and eighteen seconds, which was accomplished by an automobile. The hill has heretofore been considered impossible for the motor two-wheeler. The elevation at the foot of the grade, as given by the U. S. Bureau of Forestry, is 1,900 feet. After a climb of three miles the rider is at an elevation of 3,500 feet. The grade has many turns and at no time can the rider see more than 100 feet ahead. Of the fourteen entrants all but one finished.

The times of the finishers were as follows: G. Woods, DeLuxe, 15:50; Paul Waltman, Thor, 14:00; O. G. Nishkian, Excelsior, 22:09; L. O. Redmond, Pope, 16:59; Charles Vieheller, Indian, 18:45; Frank Murphy, DeLuxe, 14:59; Homer Trower, Thor, 15:58; E. Baldwin, Excelsior, out; R. Waltman, Indian, 16:59; G. L. Epperson, Excelsior, 13:24; Oliver Larsen, DeLuxe, 17:09; R. M. Turner, Indian, 18:24; P. Vicerich, Indian, 18:50; C. Sefer, Indian, 16:20. Waltman made second best time.

NATIONAL SHOW PLANS

Coffman Will Manage Independent Motorcycle Exhibition in Chicago—More Space in New York Show.

THANKS to the insistance of President Coffman, of the Motorcycle Manufacturers' Association, enough space will be available in the New York Show in the Grand Central Palace next January to permit of the display of motorcycle accessories, as well as the machines themselves.

At the Buffalo meeting of the Manufacturers' Association, it was decided to hold an independent motorcycle show in the Coliseum during the week beginning Monday, November 3, with President Coffman as manager. Twice as much space as the show occupied last year will be available, in fact the entire main floor of the Coliseum, the dimensions of which are approximately 35,000 square feet. President Coffman and the other two members of the committee, T. W. Henderson, and Arthur Davidson, visited Chicago immediately after the Buffalo meeting of the manufacturers and completed the arrangements.

LATEST SHOP REGISTRATIONS

AMONG the latest repair shops adopting the sign of the F. A. M. are A. T. Crabb, Brazil, Ind.; Taunton Cycle Co.; Amos Shirley, New York City; Edward Nyswander, Grand Rapids, O.; Seeber & Hofheins, Buffalo.

OHIOANS at FIRST STATE ASSEMBLY

PRESIDED over by State Commissioner Jes Campbell, the Ohio State Convention was held in the assembly hall of the Hollenden Hotel Saturday morning. E. D. Hensley, of the United States Tire Branch at Dayton, acted as secretary. Nearly one hundred delegates were in attendance; in fact, as many as participated in the National F. A. M. Assembly at Columbus last year.

Commissioner Campbell called upon Chairman Sauer, of the National Legal Action Committee, to explain the object of holding state F. A. M. conventions. Mr. Sauer said that the state convention principle had been made a part of the national Constitution and By-Laws in order to afford every club and every member of the organization an opportunity to take an active part in the government of the national body. He added that an organization like the F. A. M. could be conducted in one of two ways, either as a democracy or like a strictly business institution. In the former case individual members would only handicap their national officials if they did not exercise the rights given them under the Constitution and By-Laws of the Federation.

He pointed out that under the present form of government of the F. A. M. it was most important that every locality should be properly organized under the direction of a local commissioner having the authority and willing to take complete charge of F. A. M. affairs in his own community. Such a commissioner should not only seek to increase the membership of the Federation in his town, but also co-operate with the state and national bodies through the appointments of legal action, touring and other representatives. If this plan of procedure were not followed out in each locality the success of the state organization would be impaired. The state organization, in its turn, should act as a sort of medium between the National Board of Directors and the clubs and unaffiliated members in every community.

At Mr. Sauer's suggestion, a committee of three was appointed by the Chairman to draft a constitution and by-laws, this committee being made up of E. D. Hensley, of Dayton; Charles Quetschke, of Toledo, and Raymond Ray, of Cleveland.

Next in order came the election of a State Commissioner. R. S. McConnell nominated Jes Campbell. Mr. McConnell was also nominated, but declined, declaring that Campbell had demonstrated his ability to organize the state and his willingness to work in the interest of the Federation. Campbell's election was unanimous, as was also that of E. D. Hensley for secretary-treasurer.

Charles Quetschke, at the Left, and State Commissioner Jes Campbell, Snapped at the State Convention.

For the directorships, of which there are four, six were placed in nomination, as follows: F. L. Valiant, of Middletown; Carl Cappel, of Dayton; R. S. McConnell, of Cleveland; W. R. Kirby; Raymond Ray, of Cleveland, and Charles Quetschke, of Toledo. The ballot resulted in the election of R. S. McConnell with sixty-five votes, F. L. Valiant with fifty-four, Raymond Ray with forty-nine and Charles Quetschke with forty-one.

Upon the suggestion, by letter, of Dr. Thornley, the delegates voted to recommend a state referee. R. S. McConnell was the first choice of the convention with thirty-six votes, Quetschke with twenty-seven and Cappel with four.

State Commissioner Campbell reported an F. A. M. membership in the state of over two thousand, and forty-three affiliated clubs.

President A. B. Coffman, of the Motorcycle Manufacturers' Association, complimented the boys upon their attendance and interest shown, declaring that the state of Ohio had made a fine beginning and had set an example which other states might well follow. He expressed his disinclination to accept F. A. M. presidential responsibilities, stating that he would rather not undertake it as he did not feel that he could devote sufficient time to the work. F. L. Valiant, of the Miami Cycle & Mfg. Company, of Middletown, expressed the hope that Mr. Coffman would see his way clear to reconsider his decision, as he was confident that, in the event of his doing so, Mr. Coffman would have no trouble in getting a comfortable majority of the votes of the delegates to the Denver Convention. Valiant called upon each delegate present to promise to bring in at least three new members before the Denver convention. Those who were willing to do this were asked to stand. By actual count forty-two promised to add at least three each to the present membership in Ohio.

State Commissioner Campbell made announcement of the tour out of Chicago to the Denver convention, and requested that all who intended to make the trip a-wheel should write him at his home address, Michigan Apartments, Toledo. He also announced that those who wanted to go to Denver, but were not in position to make the trip on their motorcycles, should communicate with Mr. Sauer, at 51 Chambers street, New York City, with a view to joining the party which will make the trip in a special car.

The entertainment program was well arranged by the committee in charge. On Friday evening about two hundred riders enjoyed a lake ride on the steamer *Eastland*. A trip to Euclid Beach was on the program for Saturday afternoon, but the weather was far from inviting, it being cold and rainy, and the majority stayed indoors. Saturday night after the races at the Motordrome, a rally, at which about two hundred were in attendance, was held at the Plaza Theater in Luna Park. The F. A. M. prize cup, won by the Cleveland Club in connection with the recent F. A. M. membership campaign conducted by Director Sauer, was presented to the Cleveland boys. Short addresses were also made by Messrs. Coffman, Campbell, Hensley and Cappel. A vaudeville entertainment followed.

THE LINE-UP OF TOURISTS

Those who participated in the tours to the convention city were as follows:

Herman Warnke, Toledo (Yale); Lee Butler, Toledo (Indian); Paul Masell, Toledo (Excelsior); Charles T. Henderson, Springfield (Indian); Paul Martin, Springfield (Indian); W. Dean Mathews, Mt. Gilead (Indian); I. Schenck, Cardington (Excelsior); Ray Campbell, Edison (Emblem); F. J. Kehrwecker, Cardington (Harley-Davidson); J. E. Muller, Toledo (Excelsior); A. R. Ketcham, Toledo (Yale); Paul Misamore, Findlay (Yale); Glenn Swartz, Findlay (Yale); George Needles, Findlay (Yale); Sam Downs, Toledo (Indian); A. Davis, Toledo (Excelsior); A. R. Oberwegner, Toledo (Excelsior); L. F. Anderson, Vandalia (Yale); Paul Monroe, Sidney (Yale); Charles E. Barr, Columbus (Indian); Charles Dickason, Elyria (Merkel); Leigh Murray, Toledo (Yale); Fred Kirk, Detroit (Yale); Mrs. Lee Butler, Toledo (Indian); Mrs. T. Weiler, Toledo (Yale); A. G. Weiler, Toledo (Yale); Thomas M. Dunham, Buffalo (Yale); Homer T. Coleman, Toledo (Excelsior); H. M. John, Lorain (Merkel); William D. Shepherd, Dayton (Harley-Davidson); R. L. Hultgren, Dayton (Dayton); C. F. Weeber, Jr., Dayton (Indian); R.

McBeth, Elyria (Merkel); A. P. Cock, Oberlin (Indian); J. T. Green, Toledo (Yale).

THE RANDALL RACES

ON SUNDAY AFTERNOON the first annual Ohio State F. A. M. Championship race meet was held on the Randall track. The officers presiding were: Referee W. R. Kirby; starter, R. S. McConnell; clerk of course, Harry Johnson; judges, J. A. Campbell, E. D. Hensley, Frank Valiant and Carl Cappel; timers, Jos. Frisbie, Paul Sheridan, Fred Preston, Percy Long; umpires, A. McBeth and F. H. Penniman; scorers, Snell, Long and Entres; announcer, Harry Jacobs. The track was in fine condition and good time was made. The record for the local track was equaled. The old record for one mile was 50 seconds flat.

A Group of the Officials and Delegates Who Were in Attendance at the Convention in the Hollenden Hotel.

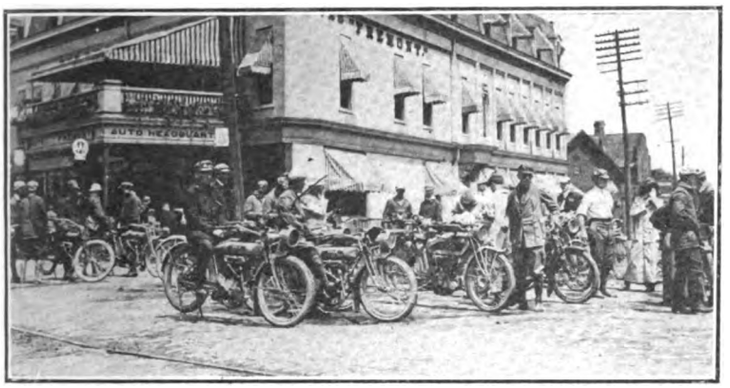
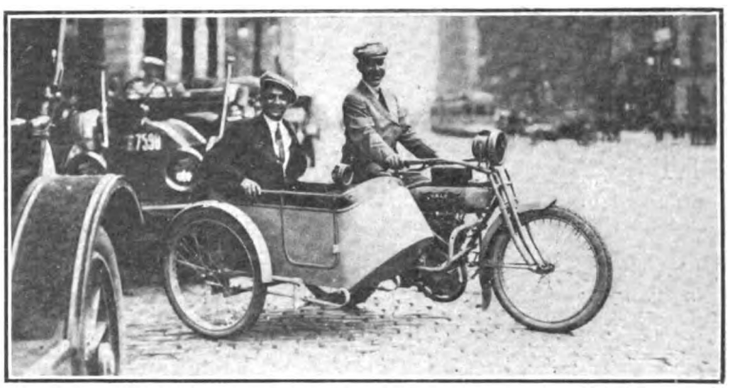
Quite a Few of the Sidecars Are Missing from This Line-up, but the Gathering Is Still Sufficiently Impressive.



Tourists Halted for Gasoline in Fremont on the Way to Cleveland.



T. M. Dunham, on Machine; Harry Jacobs in Autocrat Sidecar.

This was equaled by George Evans, of Toledo, on an Indian machine. The 25-mile race was the big feature of the day. This was won by Raymond Creviston, riding a Thor. All the races, however, were hotly contested.

Summary of events:

Five-mile Ohio State F. A. M. Championship; 61.00 cu. in.; stock; flying start; amateurs. First prize, Ohio State F. A. M. gold medal—H. Lister, Harley-Davidson; S. W. Simpson, Indian; H. Meyers, Harley-Davidson; H. D. Woolley, Indian. Time, 4:51⅘.

Five-mile professional; 30.50 cu. in.; open—Geo. E. Evans, Indian; Howard Cole, Thor; H. Huntsbery, Merkel. Time, 4:59.

Twenty-five-mile professional race; 61.00 cu. in.; open—Raymond Creviston, Thor; Lewis Seiple, Jefferson; Geo. Evans, Indian. Time, 22:57.

One-mile Ohio State F. A. M. Championship; 30.50 cu. in.; amateurs; stock; flying start—H. Woolley, Indian; H. Meyers, Harley-Davidson; Wm. Spicht, Pope; J. R. Paton, Reading Standard. Time, 1:08⅘.

Three-mile novice; amateur; 30.50 cu. in.—J. A. Paton, Reading Standard; H. D. Parker, Excelsior. Time, 4:07⅘.

Ten-mile Ohio State F. A. M. Championship; 61.00 cu. in.; amateur; stock; flying start—S. W. Simpson, Indian; H. Meyers, Harley-Davidson; Fiesler, Jefferson. Time, 9:45⅘.

Three-mile professional; flying start; 30.50 cu. in.; open—Geo. Evans, Indian; Jones, Merkel; H. Cole, Thor; H. Huntsbery, Merkel; Bailey, Yale. Time, 2:49⅘.

Pursuit race; professional; 61.00 cu. in.; strictly stock—Three entered. Won by R. Creviston, Thor; distance, 8⅓ miles. Time, 7:27.

Time trials; open—Geo. Evans equaled old record made two years ago. Time, 50 seconds flat (Indian).

Two-mile Ohio State F. A. M. Championship; 30.50 cu. in.; amateur; stock; flying start—Herbert Meyers, Harley-Davidson; H D. Woolley, Indian; Wm. Spicht, Pope. Time, 2:15.

In Spite of Numerous Outside Attractions the Riders Attended the Business Session in Encouragingly Large Numbers.

A JAUNT to GETTYSBURG

by Hugh M. Smyth.

MEMORIAL DAY coming on Friday this year, and Saturday being a half holiday, a number of riders of the Wilmington (Del.) Motorcycle Club decided to make the most of their opportunity for an outing, and as soon as I heard of the suggestion I was enthusiastically in favor of making a trip. It was rather late when we thought of the combination of the holiday and Saturday, so that it was impossible to line up many of the boys, but those of us who could get away decided to enjoy a run to the famous Gettysburg battlefield. Our plans also included a trip over to Harrisburg on Sunday for an inspection of the fine capitol. Then came several rainy days and all the riders withdrew but the writer and one other enthusiast, Harry P. Jones. We insisted upon going, regardless of the weather outlook.

Accordingly, we started from Wilmington bright and early on Friday morning, May 30. I mounted my Indian 7 and Jones rode his 9 h. Dayton. We pulled out of Wilmington about 6 a. m. and by hitting up a pace of better than fifty miles an hour we soon left Delaware behind us and crossed over the state line into Pennsylvania. We had typed the routes, giving mileages, etc., on heavy paper which we folded in sections and fastened to our Prest-O-Lite tanks by heavy rubber bands. Our tanks are attached to the handlebars, and thus make excellent map holders, being just forward of the speedometer. By this arrangement we had the route, the map and the speedometer always in front of us for reference. Our map, by the way, had been clipped from the 1912 Touring Number of MOTORCYCLE . ILLUSTRATED. We marked the times of arrival and departure at the various towns on our route sheets and in this way kept a satisfactory record of the trip. Such notes as these are worth preserving and are always useful.

Cutting up through Pennsylvania over some fair macadam and some dirt roads we soon struck the Gettysburg Pike from Philadelphia, and in a short time we rolled into the town of Coatesville. Soon after leaving Coatesville we found the pike in bad condition, several sections of it being torn up for repairs. Finally the road improved somewhat, and approaching Lancaster it was in fair shape. We quickly discovered why this was the case for we had traveled only a short distance when we were held up at a toll-gate. We were riding at about 35 miles an hour when suddenly we saw something that looked like a white-washed fence rail come down into the road ahead of us—about a block distant. We rode up and found a toll-gate. We asked why it had been considered necessary to drop the rail across the road to stop us, and the man on duty explained that he could not take chances on having someone get by without paying. This struck us as peculiar, for we have tolls in Delaware but we had never seen a gate dropped in this manner.

Warm Reception in Lancaster

A few more toll-gates marred an otherwise pleasant trip into Lancaster, but on our arrival we were repaid somewhat by finding a very lively motorcycle town. Lancaster is certainly one of the liveliest towns we have ever struck for motorcyclists. We stopped over there two hours and received numerous invitations to stay in town for the races to be held in the afternoon. We also met the York M. C. there, the boys having parked their machines in the public square while waiting to go to the track for the speed events. We would have liked to witness the races but our schedule called for more road work, and we took our departure. Arriving in Columbia, we had to pay toll and then wait fifteen minutes before crossing the railroad bridge over the Susquehanna into Wrightsville. This is certainly a long narrow bridge, seemingly more so because all the trusswork is overhead. Still it was well planked and we were soon over it.

A Stretch of Hard Going

Finally we reached York and from that point to Gettysburg we encountered some mighty tough going. It seems that the state is repairing the roads and in many places the surface is torn up so that riding is practically out of the question. We bumped over all kinds of ruts, rode through a lot of broken stone and experienced almost every other kind of trouble imaginable. Oh, but that cracked stone was fine for our tires, and it made slow going, too.

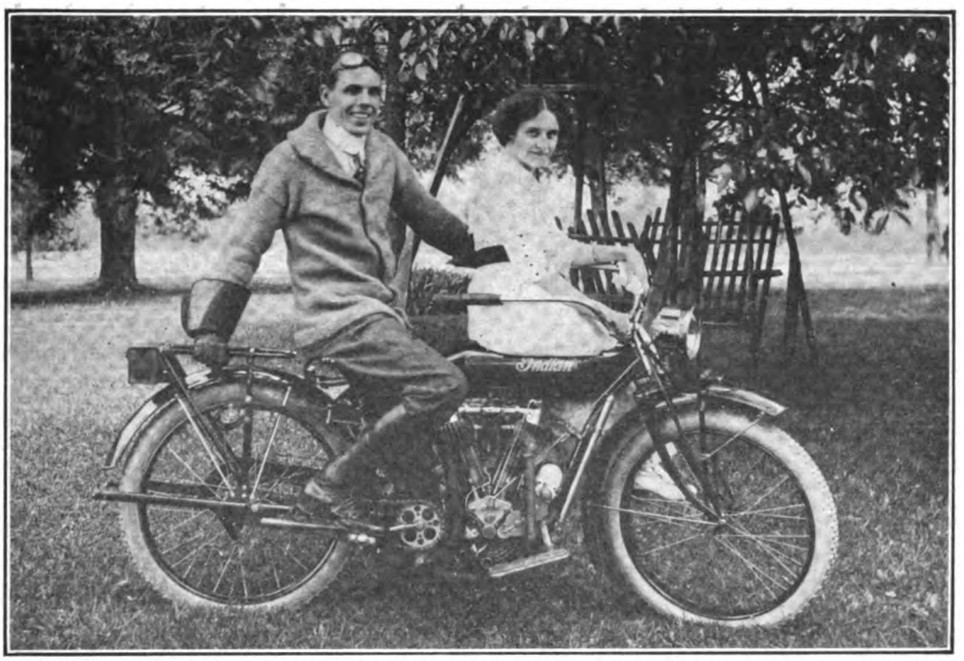
The Tourists Met a Bevy of Fair Visitors in "The Devil's Den"

In due time—and none too soon—we were rewarded by seeing Gettysburg ahead of us and we opened up a little only to find more trouble where a street was being torn up for re-paving. After getting over this we chugged through the holiday crowds and stopped at the New Gettysburg Hotel Here we enjoyed a wash and removed our riding togs. Under them we had our regular suits, so we were up to the mark as far as appearances went when we went out again to mingle with the crowd. We arrived in Gettysburg at 3:45 p. m., having

Digitized by Google

made the 120 miles from Wilmington in five and a half hours of actual riding. We had lost four hours in our stops along the route.

After supper we took a walk through the cemetery, up Culp's Hill and over East Cemetery Hill, studying the positions of the various forces as indicated by monuments so laid out as to show the progress of the second day's battle on that memorable field. On Saturday morning we rode all over the many fine drives which have been built by the government over the battlefield. We stopped frequently to view monuments and finally visited the tower on Big Round Top. From this point we looked down upon the field where Pickett made his fatal charge and later we went down to a hiding place of the Confederate sharpshooters, now referred to as "Devil's Den." Here we met half a dozen girls who were much interested in our mounts. They appear in the photograph which accompanies this article.



Donald H. Johnston, of Collins, Ohio, and a Fair Enthusiast Ready for a Park Spin.

A Detour to Harrisburg

After dinner, finding that the roads from Gettysburg to Harrisburg were poor, and having had a rainfall the night before, we decided to travel forty miles westward over the mountains to Chambersburg, and to go from there to Harrisburg. We left Gettysburg at 2 p. m. and arrived in Chambersburg at 4:30, after stopping at various points to take pictures of the mountains. Our actual running time was two hours. After a short stay in Chambersburg we left for Carlisle, the seat of the famous Indian school. We were misdirected off the route and had about 20 miles of rough mountain road to cover before reaching Carlisle.

Here we met the Indian motorcycle agent who treated us royally. We made only a short stop and then struck out for Harrisburg. We wanted to make up some lost time and for a good deal of the distance we were just two red streaks slipping over the highway. We paid toll to cross the bridge over the Susquehanna into Harrisburg, where we arrived a few minutes after seven in the evening. After supper we went sightseeing and finally turned in, tired but pretty well satisfied with our outing up to that point. At 6 o'clock the next morning we turned out, filled our tanks and made another sightseeing trip. We were much interested in the state capital, which we inspected both inside and out.

From Harrisburg we rode on to Reading, striking a pretty fair pike on which the worst features were the toll-gates. We encountered about fifteen of them where we had to stop and show a ticket that had been obtained at the first gate. On the way we stopped at the village of Hershey, where the Hershey chocolate is made, and it was undoubtedly the cleanest spot we saw on our trip.

After passing through Lebanon we reached Reading, shortly after 11 a. m. We stopped for several hours and had dinner. From Reading we made fast time through Pottstown to Norristown where we turned down past Valley Forge, through West Chester and to the Delaware line. Here we opened up for a sprint over the last leg of our outing and arrived in Wilmington at 5:30.

We had enjoyed a fine trip through beautiful country, at an ideal time of the year, and neither of us had experienced any mechanical trouble worth speaking of. I certainly gave my cradle-spring frame a severe test but it came through in fine shape. Jones was also enthusiastic over the showing of his Dayton. I discovered that I had used only five gallons of gasoline in covering 350 miles over hilly country, and Jones' consumption was about the same. We are now planning a Fourth of July trip to Delaware Water Gap, the Poconos and over into New York State.

HELPFUL HINTS

LET US back-pedal a bit upon the time-worn idea that our British friends are totally devoid of a sense of humor. Counsel for the defense submits the following, appearing above the name of Major General Horatio Bangs, in the English *Motorcycle:*

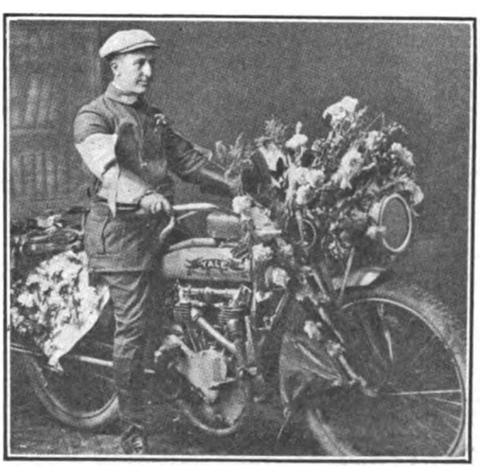
"Sir: One of the great uses of the correspondence columns in *Motorcycle* is that readers may give their experiences to others, and I wish to thank 'Next, Please,' for his most useful hint. Personally, it would never have occurred to me to remove the front wheel and take out the bearings to compress my valve springs so long as roads are bordered by fields and fields have gates, in the hinges of which one may easily compress a spring and hold it while being tied, nor do I think I possess the necessary stock of washers. It has occurred to me that the following hints may be useful to less experienced and resourceful riders than myself, but I have never tried them:

"1. If a motorcyclist should happen to leave his tire lever at home, a connecting rod will form a very good substitute, and the rider will be almost certain to find one or more of these in his engine. Also, if a piece of wood be driven into the big end, it becomes an excellent mallet.

"2. Riders wishing to tow their friends and not having an elastic tow rope are recommended to use the inner tube from their back tire; the butt-ended variety is especially suitable for this purpose.

"3. If a motorcyclist, when on tour, forgets his toothbrush, he should remember that there is a carbon brush in the magneto which will answer the purpose admirably.

"4. If a piece of thin wire be wanted for any purpose, *e. g.*, to affix a mascot, there is always an ample supply in the armature."



Harry Warnke, of Toledo, Ohio, on Yale Twin That Won First Prize in Parade Incident to Recent Race Meet

WINNERS IN MAY CONTEST

E. M. ESTABROOK, Bangor, Me., chairman of the Membership Committee of the F. A. M., announces the winners of Old Sol lamp in the club membership contest for May: Corning (N. Y.) M. C., two lamps; Nashville (Tenn.) M. C., one lamp, and the Passaic (N. J.) M. C., one lamp.

On June 30 the contest among the clubs for Old Sol lamps closes with the distribution of thirteen headlights, five of which will go to new clubs affiliating with the Federation during June. The other eight will be awarded to clubs affiliated before March 1, which have brought in the largest number of new members during March, April, May and June.

RUN TO ST. AUGUSTINE

UNDER the leadership of "Pop" Price, captain of the Jacksonville (Fla.) Motorcycle Club, members of the club recently made a run to St. Augustine. On arriving at Pablo a number of the riders declined to go any further owing to the bad condition of the roads, but "Pop" and a few of the gamer ones kept on until the "Ancient City" was reached.

SEVEN SEASONS in the SADDLE

H · C · WING

IT was back in 1906 when the automobile was just becoming an ordinary sight on the roads, that I first interested myself in motorcycles. At that time I was employed as a mechanic and anything that would afford me an opportunity to tinker with a new piece of machinery was likely to hold my attention. I well remember the incident that aroused in me a desire to bestride a motorcycle. I was at work in the shop one day when a motorcyclist stopped and asked for oil. Being what you might call "green" on the subject of lubricating motorcycles I offered the stranger some steam cylinder oil, and he was foolish enough to take it. Then I asked him numerous questions, and when he finally chugged away I watched the trail of heavy black smoke behind him and felt that life would be worth living if I could skim about the country on two wheels.

My earnings at this time were scant and the outlook for purchasing a motorcycle was anything but bright. Still I was not discouraged and as soon as possible I set about finding extra work. I toiled many an evening and on Sundays and in three months my bank account had reached a total of $60. Don't smile; that $60 looked like a small fortune to me in those days. Having some cash at hand I began to watch the classified advertising in the trade journals and finally I came upon an announcement to the effect that a 1906 model could be bought on liberal terms. I wrote the advertiser and received in reply a letter full of the most remarkable claims ever made for a motorcycle. They did not strike me as being so funny at the time, but with years of motorcycle experience behind me I cannot help smiling over that first letter.

BREAKING INTO THE GAME.

The price asked for the machine was $75 and as I did not have that much money I decided to drop the matter. Then I received another letter from the owner of the machine. He told me that I was letting a good chance get away from me, and I finally wrote him to the effect that he was asking too much for his mount. I did not believe he would make a reduction, but he did. One memorable day a letter came telling me that I could have the machine for just $60—and I sent a deposit in a special delivery letter. This done I entered upon a period of suspense, for I was so anxious to have that machine that I could hardly sleep or eat for thinking about it.

Four days after sending the deposit I was taken sick and was unable to go out when my motorcycle finally arrived. You will agree that this was pretty tough luck. I strained a point and left my bed long before I should have, and my first move was in the direction of my machine. I got it uncrated and without great difficulty trimmed it up in shape for the road. Then I attempted to start it and for half an hour I pedaled enthusiastically without getting a single explosion. Of course, you will understand that I was quite weak, and this exertion played me out so that I was forced to go back to bed for two weeks.

FIRST MISHAP IN A LONG SERIES.

I had lots of time to think over the action—or lack of action—of my machine, and when I was able to move about again I made an examination that showed me the trouble. I discovered that the machine had little or no compression, and on taking the motor down I found that the wrist-pin had worked out and scored the cylinder on either side to a depth of nearly an eighth of an inch. This necessitated a new cylinder, piston and rings before I could hope to get the outfit in running order. I ordered the new parts and after a wait of four weeks I began to assemble the engine once more. I experienced no serious trouble in getting the power-plant together and was rewarded by having the motor chug merrily along on almost the first turn of the pedals. How that old machine did rattle and pound! It nearly shook me out of the saddle, but I managed to stick to the job and in due time I decided upon a road trial.

Let me say that my first ride on that machine will be long remembered. After a rather wobbly start in which I pedaled fully a quarter of a mile I got the mount under way and was enjoying myself immensely when I came to the first turn in the road. I knew nothing about taking turns, but I was destined to learn a thing or two, and that quickly. I retarded the spark (there was no throttle control) and slowed down as much as possible, but even with these precautions I struck the turn at about 20 miles an hour.

E. T. Swenson, of Redmond Falls, Minn., initiating a fair passenger into the delights of motorcycling.

AN EVENTFUL OUTING.

Alas! the strain was too much for the tires (they had been advertised as new, by the way) and as I swept around the bend they both went to pieces. The front one went first and the rear one only a few seconds later. Then things began to happen. I lost control of the machine and flopped all over the road before I finally struck the ground. It was my first spill, and it was a corker! I'll never forget it. I turned several cartwheels and landed in a heap, but managed to escape with a few bad scratches. It was a different story with my motorcycle. Both tires were in shreds, and the first glance showed me the brand new piston sticking its head through the side of the cylinder. Just what had happened I will never know, but is was evident that the piston had run amuck during the fracas.

As I did not wish my friends to see my predicament I waited until dark and then pushed the machine home, taking a roundabout course. I was very sore (mentally and physically) and discouraged, but not with motorcycles in general. I felt that I had been trimmed most effectively on that machine but I did not give up my determination to be a full-fledged motorcyclist. About a week after the spill, when some repairs had been made, I traded my first mount for another of a different make. This gave me trouble from the start, and after getting it in running shape I sold it for $40, and was glad to get rid of it. At this point I decided not to buy another motorcycle until I could afford a new and reliable one. I was thoroughly convinced that it did not pay to invest in second-hand machines.

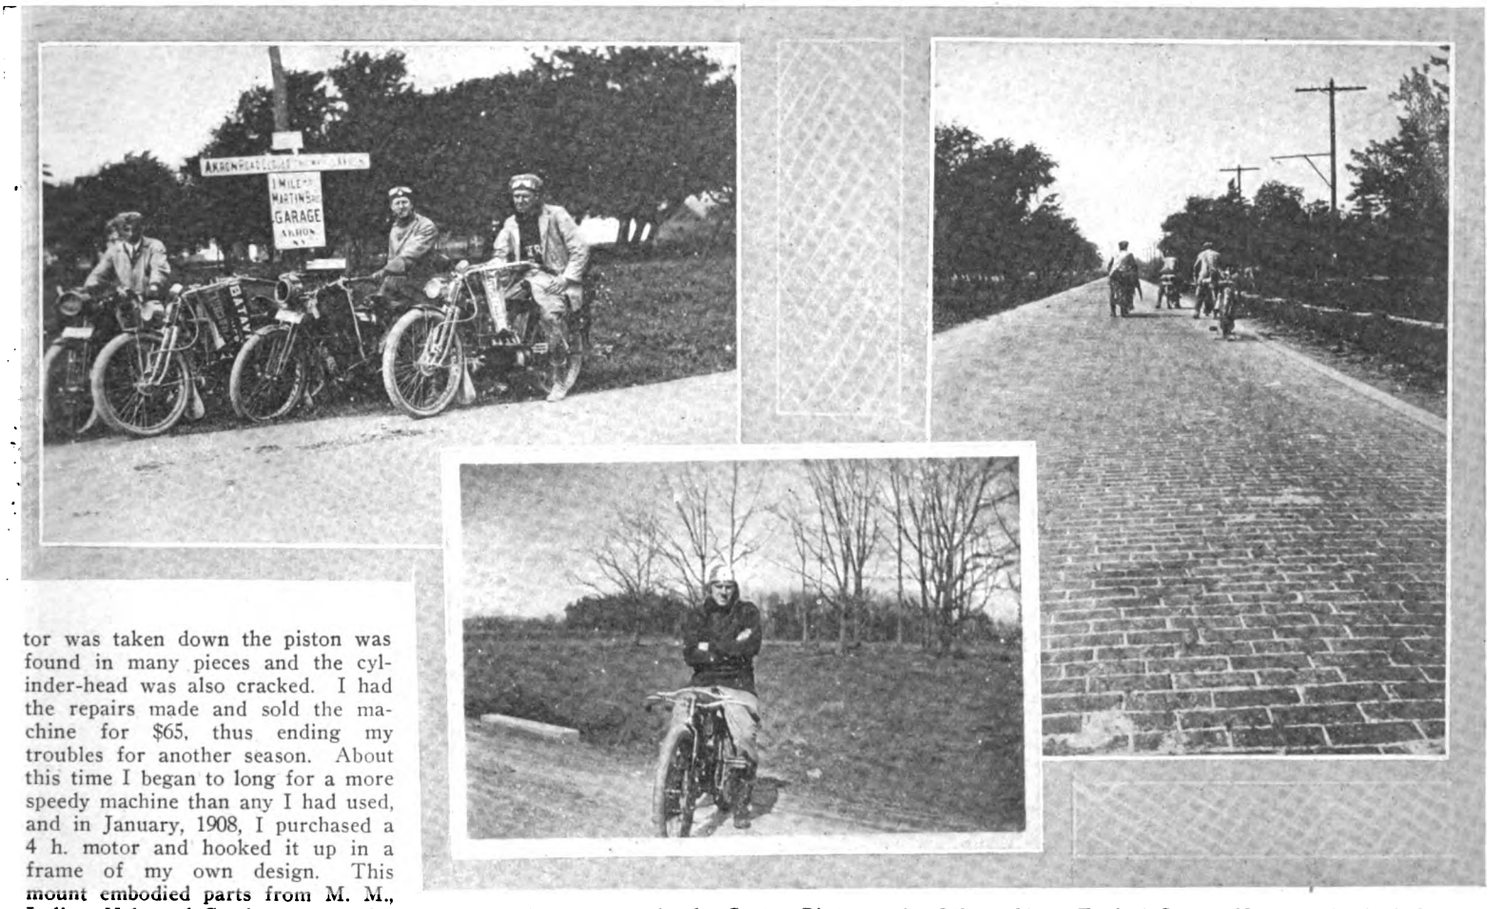
A SATISFACTORY MOUNT AT LAST.

Still I was not long without a machine, for a month or two later a friend came to me with his machine, and agreed to let me use it for the remainder of the season if I would have a few repairs made. I jumped at the offer and soon had the mount in good trim. When it was ready for a try-out I hopped aboard and went off down Main street like a sky-rocket, without a muffler, light or horn. The next day I was served with a summons to appear in court for violating the speed

Digitized by Google

ordinance. Thereafter I was more careful. The machine gave excellent service and I had many a pleasant spin on it before the first snow fell.

In the spring of 1907 I bought a new machine of a well-known make and during the season I covered almost 4,000 miles on it without experiencing any trouble worthy the name. Late in the summer I had a chance to exchange for a machine of another make that was almost new, and as my machine had seen considerable service I decided to make the change. I had been riding the new machine only a short time when I had a spill that put the chugger in a repair shop. When the motor was taken down the piston was found in many pieces and the cylinder-head was also cracked. I had the repairs made and sold the machine for $65, thus ending my troubles for another season. About this time I began to long for a more speedy machine than any I had used, and in January, 1908, I purchased a 4 h. motor and hooked it up in a frame of my own design. This mount embodied parts from M. M., Indian, Yale and Curtiss motorcycles and came to be known in our district as "Little Red Riding Hood."



Mr. Wing Appears in the Center Picture; the Others Show Typical Scenes Near Springfield, Mass.

This mount proved speedy on the road and in a number of impromptu brushes I finished first. There was a reason for this, of course, for my machine developed 4 h. while most of the other mounts of that period had only 1¾ to 2½ h. I figured in some local races and while traveling at 50 miles an hour on one occasion I had a spill that wrecked the machine. I luckily escaped serious injury.

AFTER RACING LAURELS.

I managed to patch the motor up once more and participated in a July Fourth race meet in a neighboring town. The feature race was for two miles and was run in three heats. My motor seemed to be in poor condition and I was a tail-ender until the final lap. Suddenly I discovered that a broken spark plug connection was to blame for my trouble and I leaned over and held the wire in place. This allowed me to pick up lost ground and I shot across the line six feet to the good. I won the second heat with ease and figured that the third would go the same way, but after the second whirl somebody drained the gasoline out of my tank and that put the lid on me.

However, I felt pretty well satisfied with my machine and myself and three weeks later I entered a 5-mile free-for-all at a firemen's picnic. There were five starters, four singles and a twin. Those riding singles, like myself, figured that they would best the twin on the turns, but this theory did not work out. The twin rider pulled far ahead of us on the stretches and just slowed up enough on the turns to tease us. This race put a crimp in my pride and about two weeks later I sold "Little Red Riding Hood" and took a rest.

Next I bought a machine of a make that is now off the market, but I kept it only a short time. It was a 3 h. mount. After this came 3 h. racing motor which I assembled myself and placed in a standard frame. There was a big race coming off and I had the motor ready in time, but was unable to get tires, so I had to suffer another disappointment.

THE JINX STILL ON THE JOB.

I telegraphed several times for the tires and finally received them a week after the race. By way of making up for lost time I took the machine out on the road and had a spill that wrecked the front wheel. A week later I broke the rear wheel and soon afterward I struck a car track while riding at 50 miles an hour and was thrown seventeen feet in the air. I still have a few marks to show for that experience. As it seemed that this machine was made for hard luck I sold it. In the winter of that year I went to Jacksonville, Fla., and while there I picked up a 1908 model of a prominent make and began to test it.

I knocked around on it for a time with varying success and then purchased a 1909 model with which I made a trip to Jacksonville, Fla. While here I sold my machine but soon bought another and then went further southward. This machine had 3½ h. and as the roads in the Gulf section are anything but good I went through some exciting experiences. Still I did quite a bit of riding, and in general I enjoyed it. The machine finally settled down to fairly good work and I brought it home with me late in the fall of 1909. That ended my season's riding.

(To be continued.)

SANCTIONS WITHOUT CHARGE

IN PAST seasons a number of requests have reached Chairman Thornley, of the F. A. M. Competition Committee, for racing sanctions without charge, the explanation being offered that the program was being staged for a charitable cause or to boost Federation interests. The chairman has been puzzled as to how to discriminate between these applications and those for which the regular fee could be expected, and he has accordingly announced that the only sanctions to be issued without charge for the present season will be those covering events that are staged directly for charitable causes. Should an application be made on any other basis (requesting exemption from the fee) it will be referred to the Board of Directors.

AN expenditure of $50,000 is planned by the city of Baltimore this year to motorize the municipal departments, the plan being to replace all horse-drawn vehicles with automobile or motorcycles.

Digitized by Google

THE Indian team consisted of eight machines. Three were nominated for the team prize, viz.: Oliver C. Godfrey, C. B. Franklin and J. R. Alexander, all riding specially built single cylinders, with dimensions of 82½ x 93 m. m. Of the remaining quintette, a Manxman named Noel Brown, and two more trade entrants, J. F. Sirett and Sidney George (the latter a discovery of W. H. Wells, and reported to be a real speedster), also rode special new single cylinder racers, while the remaining couple, A. H. Alexander, Jr., and O. G. Braid, rode a pair of the old cut-down 5 h. racers, measuring 70 x 64½ m. m.

Alexander's twin was the actual machine which Godfrey steered to victory in 1911; it is four years old, and has twice had its stroke shortened to fit the regulations of these races, for it started its road life as a 5 h. As it turned out, this machine figured most prominently in the race. There were 44 entries for the Junior race, and 103 for the Senior; it was impossible to find room for all these men simultaneously on a 37½ mile lap of very dangerous roads. Consequently the Junior men raced for two laps on Wednesday morning, after which the roads were cleared for the Seniors to race three laps on Wednesday afternoon. Then the machines were put under lock and key till Friday, when the survivors, numbering 32 Juniors and 79 Seniors, raced concurrently for the concluding four laps, the two sets of riders being distinguished by red and blue vests, bearing large numbers.

The Senior Race

THE ORDER of starting was by ballot, the 1912 winner, Applebee, on a two-stroke Scott, having the privilege of going off first. The eight Indians started 8, 26, 31, 38, 44, 79, 93 and 103, respectively. The first lap created a huge sensation. The two brothers Collier, with Harry Reed on a Jap-engined Dot, Applebee's Scott, and the two Indians ridden by Godfrey and Franklin, were regarded as the fastest entrants, but when the judges hoisted the lap times on the hundred yard boarding at the winning post, four single-cylinder Rudges headed the list, and the favorites were in a clump behind them, with the younger Alexander who was not seriously fancied, sandwiched betwixt them, thus:

Final Standing of First Eight Riders in Senior Tourist Trophy Event.

	H.	M.	S.
1. Wood, 3¾ h. two-stroke Scott	5	26	18
2. Abbott, 3½ h. Rudge	5	26	23
3. Alexander, 3¾ h. Indian, twin.	5	30	11
4. Franklin, 3¾ h. Indian, twin.	5	32	4
5. Cocker, 3½ h. Singer	5	32	13
6. Sheard, 3½ h. Rudge	5	42	27
7. Moxey, 3½ h. Zenith	5	45	42
8. Garrett, 3½ h. Green	5	50	49

1. Sheard, Rudge.....44 m. 23 s.
2. McDonagh, Rudge.....45 m. 2 s.
3. Greene, Rudge.....45 m. 11 s.
4. Bateman, Rudge.....45 m. 43 s.
5. Alexander, Indian, t. c..46 m. 6 s.
6. Godfrey, Indian, s. c.....46 m. 7 s.
7. C. Collier, Matchless.....46 m. 9 s.
8. H. Reed, Dot.....46 m. 11 s.

Wise heads wagged eagerly over this surprise, and we decided that the Rudges—which have a purely track reputation so far as speed is concerned, would not stay the course, and that the old hands behind them were hanging back, and letting the Rudges crack each other up. We waited confidently to see the Rudges let up the champions on laps two and three. But further sensations were in store for us.

When the Favorites "Went Bad"

GODFREY was missing when the men came around again, and it turned out that his engine chain and sprocket had swirled off the crankshaft and ricochetted over a hedge into a field of hay when he was beating 70 m. p. h. along the fastest piece of the course. Greene had met tire troubles—the Rudges were thrown out of the race by bad tires pure and simple; McDonagh burst his tire at speed, broke his collar-bone, and was ambulanced off to hospital. This left three vacancies in the original eight leaders, and they were snapped up by the Scott team's fourth string, by another Rudge, and by Franklin's Indian in the following order (times given are net for 2 laps—75 miles):

	H.	M.	S.
1. Sheard, Rudge	1	30	49
2. Wood, Scott	1	30	53
3. Bateman, Rudge	1	31	18
4. C. Collier, Matchless	1	32	7
5. Franklin, Indian	1	32	28
6. Alexander, Indian	1	32	34
7. Reed, Dot	1	33	14
8. Abbott, Rudge	1	33	23

The next lap produced an absolute slaughter of the favorites. Both the Colliers went out, Charlie with tire troubles, and Harry with a burst valvecap, of all extraordinary mishaps. Sheard's tires went, as his colleagues' had done in the earlier laps, and he dropped right back. Wood came with a wet sail and snatched four minutes' clear lead of everybody, and Sirett's Indian pulled up to back up his teammates, while Applebee, the 1912 winner, had as narrow an escape as a man could wish. He had just completed the fastest part of the course—which was also the roughest, and had slowed down for a bad bend when his steering began to wabble. Jumping off, he found both steering fork blades had snapped clean across, the wheel being held only by the bisecting flat liner, which is used on the Scott, as on the Indian, to strengthen all the frame tubes; had it occurred a mile sooner, nothing could have saved his life. So the first day's racing ended with the following eight men in front, not one of whom had been seriously fancied as a "placed" man, unless we except Franklin.

(112½ miles)

	H.	M.	S.
1. Wood, Scott	2	14	3
2. Bateman, Rudge	2	18	15
3. Alexander, Indian	2	18	34
4. Franklin, Indian	2	19	8
5. Abbott, Rudge	2	19	44
6. Sirett, Indian	2	20	32
7. Sheard, Rudge	2	20	38
8. Mundy, Triumph	2	20	44

This left it anybody's race, but as the Scotts were suspected to be deficient in stamina and had encountered serious plug troubles, due to the quantity of oil they require, the race was commonly regarded as a magnificent Rudge-Indian duel, with the red Indian a hot favorite.

Digitized by Google

Friday's Concluding Four Laps

SENSATION began early on Friday and kept us all on tenter-hooks until the finish. Wood got into bad trouble on the fourth lap. He broke a water joint, and had to make two stops of 3 minutes each to mend it, while a momentary airlock in his petrol pipe caused him to conk out on the frightful hairpin bend with which the seven-mile ascent of Snaefell mountain begins, and so made him slow on the very part of the course where he was normally pulling back a couple of minutes on the fourstrokes. Sheard had more tire troubles, and after 150 miles the order was:

	H.	M.	S.
1. Bateman, Rudge	3	4	51
2. Alexander, Indian	3	4	58
3. Abbott, Rudge	3	5	39
4. Wood, Scott	3	7	59
5. Reed, Dot	3	8	16
6. Franklin, Indian	3	9	33
7. Sirett, Indian	3	9	45
8. Cocker, Singer	3	12	52

The next lap a terrible catastrophe let Alexander's Indian into first place. Poor Bateman was coming down off the mountain top, where a long straight grade of 1 in 10 ends in a sharp righthand curve. He was passing another rider on the inside, and had to leave his usual line round the corner. Getting into a rut he developed the speedman's wobble, and fought his machine manfully for upwards of 200 yards down the next straight; at last the front tire left the rim, and he was pitched 30 yards, falling on his head. He broke both legs and fractured the base of his skull, dying in hospital ten hours later, without ever recovering consciousness; he was a young Coventry tester, and leaves a widow and a child. This mournful smash cast a gloom over the rest of the race.

Meantime Wood had got his water joint taut, and was riding like a devil let loose from hell; the Scott open-frame with low central weight holds the road like a postage stamp, and he could take corners fast without cutting out, lying over at an angle of 40 degrees, where other riders had to switch out, and slow right down. His corner work was terrific to behold. Reed had an inlet valve head break off in his back cylinder, and it behaved in weird fashion; it went plump through the piston, and the connecting rod caught it and sent it flying out like a bullet through the cylinder wall.

Hopeful Outlook for Indians

ABBOTT was now the sole hope of the Rudge team, and with three Indians in the first five, and all going well, we began to prepare our farewells to the graceful silver trophy, which looked like gracing Madison Square Garden next show time. Lap 5 (187½ miles) ended thusly:

	H.	M.	S.
1. Alexander, Indian	3	51	44
2. Abbott, Rudge	3	52	13
3. Wood, Scott	3	55	22
4. Franklin, Indian	3	56	52
5. Sirett, Indian	3	57	20
6. Cocker, Singer	3	59	24
7. Sheard, Rudge	4	3	9
8. Brown, Indian	4	5	24

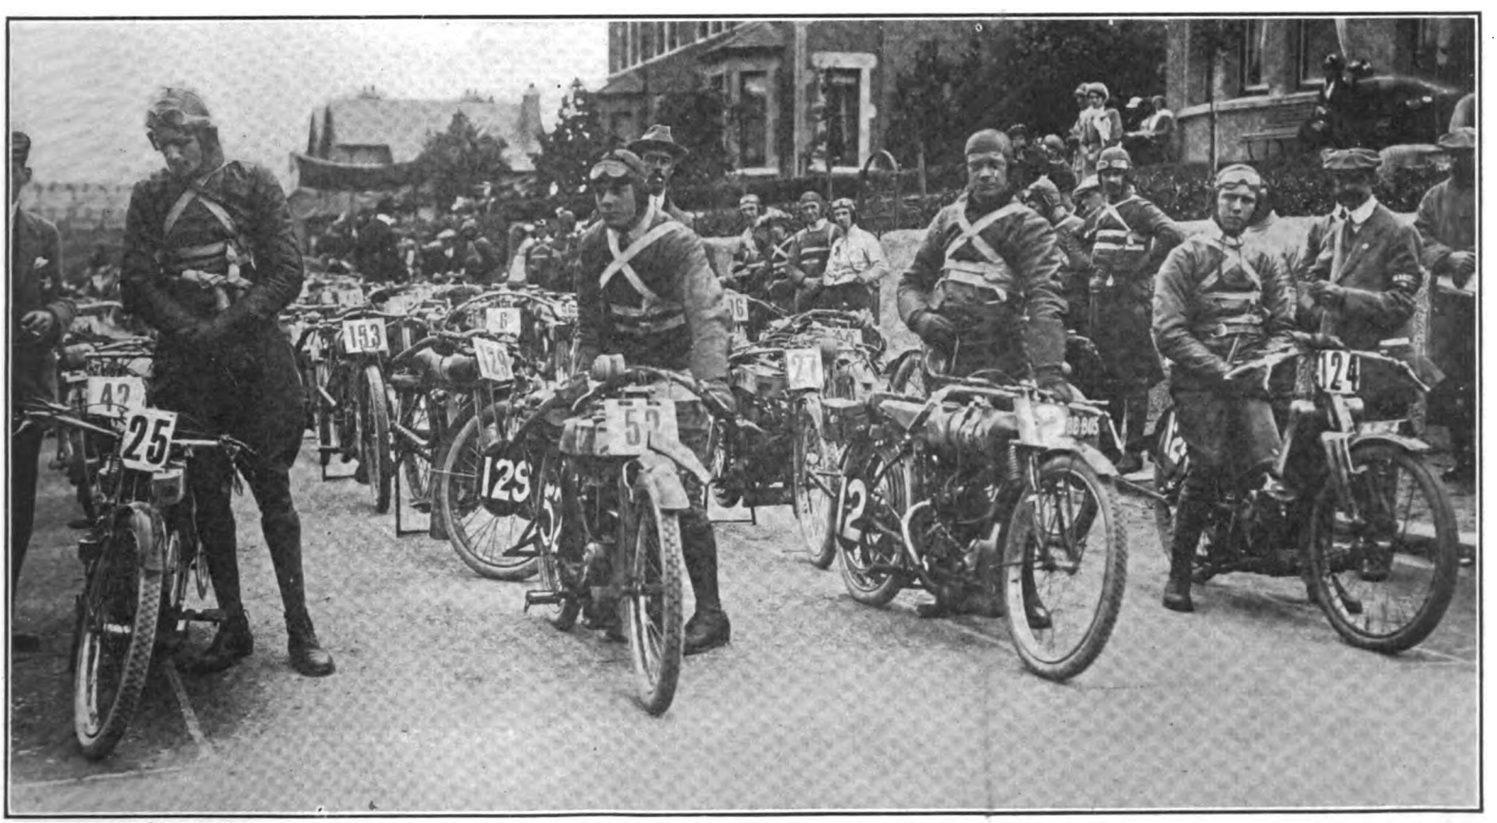
In the sixth round it became plain that the Scott was not yet done with. Wood rode with a dash and deviltry that put everybody else in the shade. His machine was no faster—perhaps not so fast—as the Rudges and Indians along the easier sections of the course, but one had only to watch him on corners to see that he was out to win, and likely to win. He got his wheel in front again, and there were only seconds between him and Abbott and Alexander. At 225 miles the positions were:

	H.	M.	S.
1. Wood, Scott	4	40	23
2. Abbott, Rudge	4	40	34
3. Alexander, Indian	4	40	55
4. Franklin, Indian	4	45	45
5. Cocker, Singer	4	46	37
6. Sirett, Indian	4	51	17
7. Sheard, Rudge	4	56	12
8. Moxey, Zenith	4	57	24

It was really a question now of who was due for a replenishment stop at one of the fuel depots; there were two official depots, and so few people knew whose tanks were full, and whose supplies were failing As it turned out, both Abbott and Wood had recently filled up, and Alexander's forward running was discounted by the fact that his tanks were nearly dry. Moreover Wood had a little more power up his sleeve. The men tore round the last 37½ miles, and there was mourning at Ramsey depot when Alexander rounded the corner slowing down and signalling to his attendant. He was very smart, getting oil and petrol on board and being off again in 22 seconds dead, but, as it turned out, even this stoppage did not lose him the race.

Abbott's Narrow Escape

ABBOTT knew he was there or thereabouts, and he dropped off the mountain summit at the speed of an aeroplane which has burst in an attempt to break the altitude record. In fact so fast did he go that he overshot one of the corners, coming up too fast, and seeing it meant death to turn at such a pace. So he charged down the byroad with his brakes spitting sparks, leapt off, lugged his machine round, and tore back on to the course. As it proved, this blunder just lost him the trophy, though Wood, curiously enough, did exactly the same thing at another corner on the very same stretch of road. However, Abbott passed the winning post by himself, and the



Start of Senior T. T. Race. Note How the Contestants Are Togged for the Long Grind Over the Treacherous Isle of Man Course.

Digitized by Google

crowd, hastily adjusting the net times, made out that if Wood arrived within a minute and a half he would win.

The eternal seconds ticked slowly away when a tiny dust cloud was seen swooping down off the mistclad heights. Bigger and bigger it grew, faster and faster it came, till at last with the two-stroke engine screaming like a soul in torment at incalculable revolutions the Scott flashed past the post just on the stroke of time, and a confused hub-bub broke out, for only the officials could say whether the Rudge or the Scott was first. The signal presently emerged from the chronometer box that the Scott had won by *five seconds*—truly a thrilling finish to a thrilling race. The official times of the first eight men were as follows:

	H. M. S.
1. Wood, 3¼ h. two-stroke Scott	5 26 18
2. Abbott, 3½ h. Rudge	5 26 23

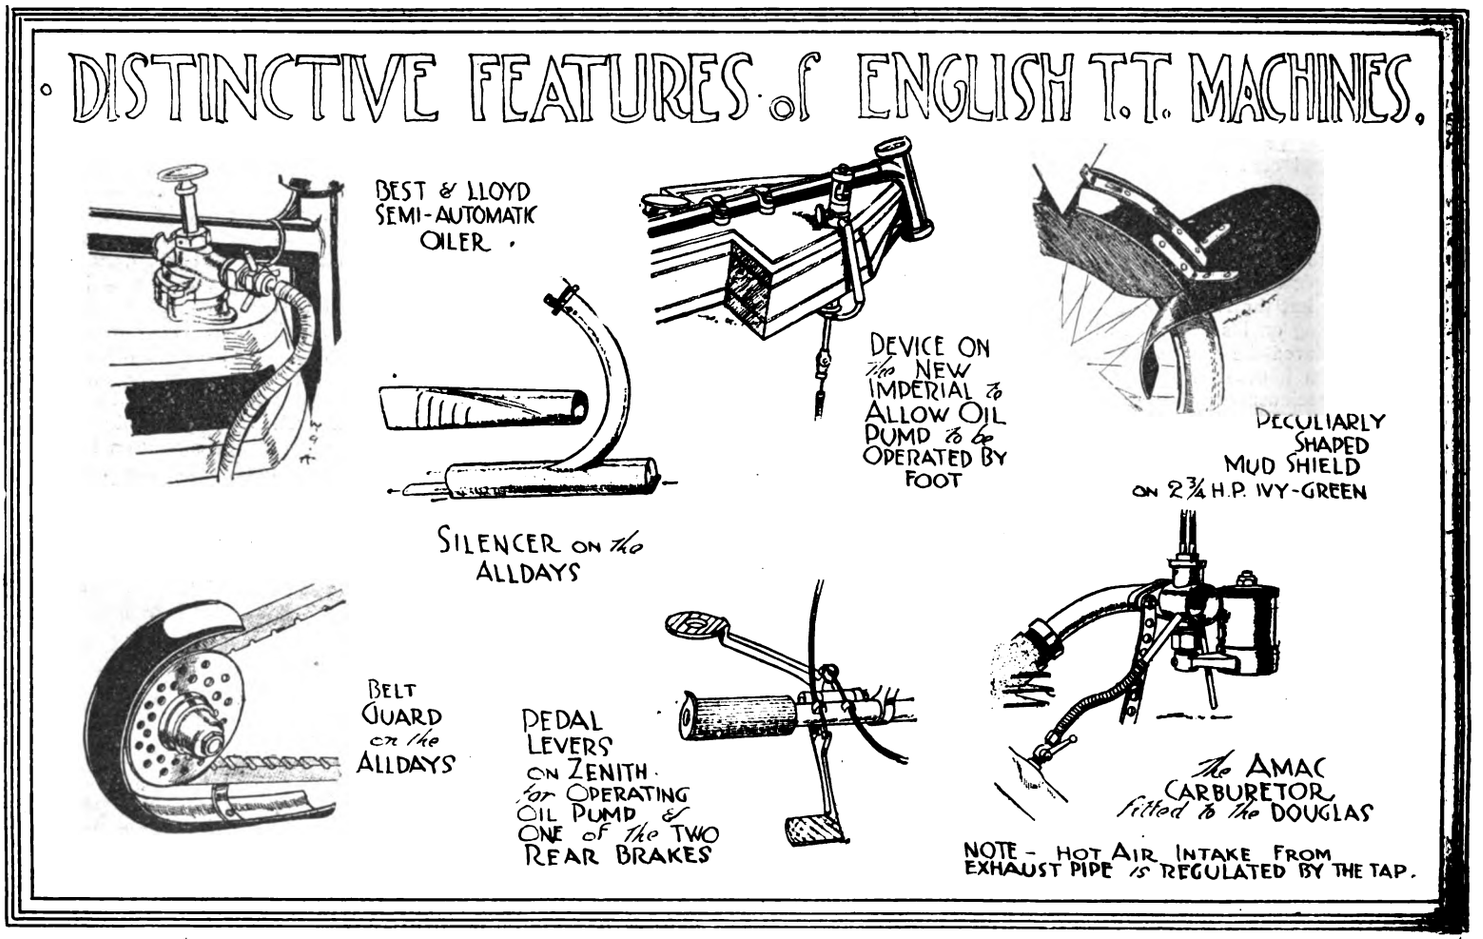
team prize for regularity of running, despite the fact that the secured 3rd, 4th, 10th, 14th, 16th, 24th and 26th places with only eight starters. The team prize went to the Rover Company, who entered three machines, none of which were ever formidable and finished 15th, 19th and 28th, respectively. This anomaly is due to the asinine regulation requiring entrants for this prize to nominate a particular trio of riders.

Actually the Rover team was the only nominated trio to finish, badly as they performed. The Rudge luck was also cruel; not one their large team suffered any stoppage other than those connected with tires, and they were undoubtedly the speediest and most reliable entry in the race; yet, as the lap times show, after bad tires had outed their four best riders, another Rudge man forged ahead and was only beaten through a tiny error of judgment within two miles of the winning post. This is

machine leading two Douglases by a few seconds. Mason was not expected to last, as a bad smash in practice had rendered him unfit to compete. He was vomiting over his handlebars during the race, and was literally delirious at the finish, and had to be parted from his machine by force and taken to hospital. However, he kept going for the second lap on Wednesday after which the leaders were left very close, viz.:

	H. M. S.
1. Mason, N. U. T.	1 41 58
2. Bashall, Douglas	1 42 3
3. Newsome, Douglas	1 42 30
4. Heaton, A. J. S.	1 43 33

During Thursday's rest Mason received medical attention, and was permitted to start on Friday, though few people expected that he would be equal to four more laps at a gruelling speed. Bashall soon had a tumble,



3. Alexander, 3½ h. Indian twin	5	30	11
4. Franklin, 3¾ h. Indian twin	5	32	4
5 Cocker, 3½ h. Singer	5	32	13
6. Sheard, 3½ h. Rudge	5	42	27
7. Moxey, 3½ h. Zenith	5	45	42
8. Garrett, 3½ h. Green	5	50	49

Other Indians to finish were Noel H. Brown, 10th, 5.56.57; S. George, 14th, 6.4.21; O. G. Braid, 24th, 6.33.33; J. F. Sirett, 16th, 6.7.49, and J. R. Alexander, 26th, 6.50.11. So apart from their champion Godfrey's mishap, the entire Hendee team were placed, and three of them looked very like winning in the middle portion.

Indians and Rudges in Hard Luck

TWO TEAMS suffered rather cruel luck; the Indians in that they were not awarded the similar to the Indian luck with tires three or four years ago. The winner had never competed in any race or trial before—he is repair foreman at the Scott works, and was put up at the last minute to ride the spare machine built for the team.

The Junior Race

THE 350cc. event was almost equally exciting, and its early stages witnessed a great slaughter of champions. The race was expected to lie between the Humber and Douglas teams, but the Humbers were never in the race at all, and the Douglas machines were beaten by a dark horse after a close finish. Two of the Douglas champions never got further than the first bad corner, and the first lap saw Hugh Mason on a Jap-engined N. U. T. and Mason and Newsome came out from the crowd by themselves to contest a most interesting duel. On the third lap Newsome led by 64 seconds. On the fourth lap Mason was only 10 seconds astern. On the fifth Newsome had drawn away again by 76 seconds, but on the sixth and last lap Mason beat all records for the 350cc. race by lapping in 49 m. 32 s. (equal to over 45 m. p. h.) and the two finished so close together that only the timekeepers could adjust the net speeds and say who had won. It proved that Mason had been 46 seconds faster over the complete distance, and he was thus awarded a very grim and plucky victory. He collapsed at the winning post, and had to be carried off the course and put to bed. Pluckier riding than Mason's has seldom if ever been seen in an English race.

LATE reports from Elmira boosters and from State Commissioner J. A. Hall and his lieutenants are to the effect that all is in readiness for the opening of the first New York State F. A. M. convention in Elmira on July 4. Committees have been working at top speed for the last ten days and as a result the assembly plans have been given wide publicity. Arrangements have been made for two general tours to the convention city, one from Buffalo and the other from New York City, and two shorter trips—from Hornell, to the west of Elmira, and from Binghamton on the east.

It is the intention to have the Lockport and Niagara Falls motorcyclists meet in Buffalo on the morning of July 3, leaving their respective towns at 6 o'clock so that an early start can be made on the trip across the state. They will pass through North Tonawanda on the way to Buffalo, at which point they will have traveled approximately 44 miles. There are two clubs in the Bison City, the Malta M. C. and the Buffalo M. C. From Buffalo the route leads to Batavia (total mileage from start, 81.7), to LeRoy (91.7 miles); Caledonia (99.2 miles); Scottsville (107.2 miles) to Rochester, the dinner stop, (118.2 miles). From Rochester the party will proceed to Canandaigua (147.8 miles); Geneva (164.5 miles); Seneca Falls (175 miles) to Auburn, where it will meet the division from New York and Albany.

New York motorcyclists who wish to make the full trip on their machines will be called upon to start at 7 a. m. on July 2. Otherwise they may go to Albany by the night boat and be prepared to start westward across the state early on the morning of July 3 with the riders from Albany and vicinity. Those who use their machines will travel the following route: Mt. Vernon, Tarrytown, Ossinning, Peekskill (Middletown and Newburgh riders will join at Fishkill Landing); Poughkeepsie, Rhinecliff (noon stop); Hudson, Kinderhook, Albany (night stop). Leave Albany at 6 a. m. July 3 for Schenectady, Amsterdam, Little Falls, Herkimer, Utica, Rome, Oneida, Syracuse and Auburn. From this point the joint squad will ride southward to Ithaca, where it is expected that a large delegation will be picked up. The touring party will then proceed to Horseheads, just to the north of Elmira, where it will be joined by the squads from Hornell and Corning to the west, and riders from Binghamton, Owego and smaller towns to the east. When all the tourists are rounded up in Horseheads the triumphal entrance will be made into Elmira.

The program in Elmira will open on the evening of July 3 with an "enthusiasm parade" by local riders, and any visitors from nearby towns who may be on hand. Following the parade a band concert will be held in one of the parks. On the morning of July 4 the entire Elmira club will act as a reception committee, and visiting riders will be escorted to the clubrooms. The Elmira M. C. requests that clubs or separate squads of riders that cannot arrange to join the main touring divisions give notice in advance so that a delegation may be sent out to meet them as they approach the convention city.

On the afternoon of the Fourth there will be races at the Maple Avenue Driving Park, the program including a novice event, a two-mile state championship, a professional race and a whirl for amateurs. In the evening there will be a big parade, with special floats on sidecars and other interesting features, and later there will be a "get-together" session and a smoker under the club auspices. The convention proper will be held on the morning of July 5 at City Hall. On the afternoon of the fifth visitors will be escorted through the extensive plant of the Eclipse Machine Company and later there will be races, with the events arranged as on the previous day, except that there will be a one-mile state championship instead of a two-mile championship event.

On the evening of July 5 there will be a "big feed" at Cold Brook Cottage, and this, with incidental entertainment features, will keep the visitors interested until it is time to flag the proceedings for the night. On the following morning the convention will be continued, if an adjournment is found necessary from the fifth, and if not there will be a sightseeing trip around Elmira and into the picturesque suburbs. On the afternoon of the sixth the Elmira club will escort the visitors on a trip through Watkins Glen, and this outing will close the official program.

Melodigrand Player Piano to Be Awarded in New York State Membership Contest.

Large posters have been sent to every club in the state calling attention to the plans and requesting attendance, and a beautiful 50-page souvenir program has been prepared, containing facts relative to the convention and considerable data concerning Elmira.

A handsome loving cup will be awarded by the Elmira M. C. to the club sending the largest number of representatives, pro rata, and a medal will go to the member who brings in the most F. A. M. memberships during the convention. In addition, each rider who joins the tours to the convention city will receive an F. A. M. pennant, with the compliments of MOTORCYCLE ILLUSTRATED.

During the convention State Commissioner Hall will outline plans for an extensive membership contest in which the prize will be a Melodigrand player piano, which is being donated by Henry and S. G. Lindeman, Fifth avenue at 142d street, New York City, through Mr. Hall. This award is undoubtedly the most costly and attractive ever offered for a contest of this kind, and that it will result in unprecedented activity on the part of clubs and individual riders throughout the state may be taken for granted. All the regulations have not been decided upon, but it is the understanding that the contest will continue until the first of the year. When the plans have been threshed out at the convention a full statement of the conditions will be prepared and given wide circulation, so that all affiliated clubs in New York State may start on an even basis.

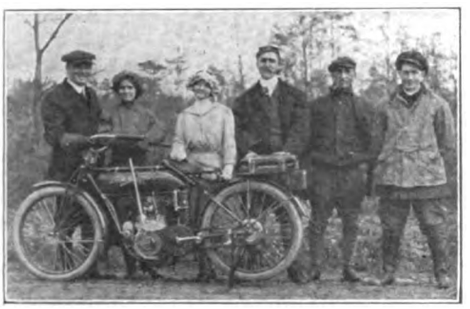
State Commissioner Hall announces that riders of the Metropolitan District who cannot get away from business before the eve of the fourth, and who may not wish to go to Albany on the night boat, can make the trip direct to the convention city by train, leaving the Erie depot, Jersey City, at 1 a. m. on the fourth. Arrangements have been made to have special Pullman cars attached to this train for F. A. M. members, but in order to justify this procedure it will be necessary for clubs and individuals to communicate with Commissioner Hall at once. This train will make the following stops: Middletown, 2:42; Port Jervis, 3:24; Deposit, 5:41; Susquehanna, 6:19; Binghamton, 7:06; Owego, 7:44; Waverly, 8:13; Elmira, 8:40.

Those who ride their mcahines to Elmira will observe a 17-mile-an-hour schedule, and

Digitized by Google

will be counted out and will not be eligible for any of the special prizes during the convention program.

Special emphasis is placed upon the fact that all motorcyclists of the state are invited to attend the assembly. Riders who are not affiliated with clubs may join some club for the trip or make up separate squads for the run to Elmira. Everyone will be welcome, regardless of club affiliations, and it is confidently expected that there will be a large attendance of unattached riders. The main touring squad will arrive in Elmira at 10 a. m. on July 4 and the fun will begin at once.



AT THE left in the photograph appears C. A. Van Doren, Flying Merkel agent in Atlantic City, N. J., and the other members of the party are friends who have accompanied him on a run westward from the coast into the pine tree district.

ON TRANSCONTINENTAL TRIP

OTTO BHEND, representing the San Diego (Cal.) branch of the Y. M. C. A., is riding from his home to New York, distributing California advertising material en route.

MORE AMENDMENTS

Chairman Thornley Will Propose Change by Which President of F. A. M. Would Be Chosen by the Directors.

CHAIRMAN J. P. THORNLEY, of the F. A. M. Competition Committee, announces that he will present at the coming convention amendments to the Federation constitution and by-laws which will provide for the election of the president of the national body by the Board of Directors instead of by the delegates to the assembly.

This does not imply that a candidate for the presidency must be a director in order to be eligible, but simply that the election of the chief executive will be facilitated through having the selection made by the directorate instead of the delegates at large. As soon as the official was elected, under the proposed amendments, he would automatically become chairman of the Board of Directors, and would be so designated.

COLUMBIA CLUB RE-ORGANIZED

AT A re-organization meeting of the Columbia Motorcycle Club, of Columbia, S. C., Dr. Hoefer was elected president; K. W. Hollingsworth, vice-president; George M. Thayer, secretary-treasurer; S. F. Habenicht, assistant secretary-treasurer, and Charles W. Cochrane, captain. The club has made arrangements to hold a race meet on the South Carolina Fair grounds track on July Fourth. This speedway is a one-mile circuit and is being put in good shape for the meet.

A PRINTING company of Marion, Ind., has engaged five motorcycles to take the census for a directory which is being prepared.

THEFTS IN INDIANAPOLIS

MOTORCYCLE thieves found a lucrative field in Indianapolis during the recent Speedway events. Four machines were stolen and no trace has been found of them. The police were notified immediately and the Indianapolis M. C. sent out a searching party. Machines belonging to R. H. Sturm and O. Hammel were taken from in front of the club headquarters. The numbers of the machines, all of which were Indians, are: 72D024, 75D430, 88E092 and 74E751.

RAY WATKINS and Ben Torres, riding alternately at San Jose, Cal., recently covered 346 miles on a motorcycle in seven hours. Not a single repair, replacement or adjustment was made to the machine during the ride.

IN THE accompany photograph appear some of the members of the LaPorte (Ind.) M. C. who participated in a recent outing.

FIRST RUN TO ELM GROVE

ON THEIR first run, members of the recently organized Wheeling (W. Va.) Motorcycle Club rode to Elm Grove. Their route included the towns of Bridgeport, Martins Ferry, Bellaire, Benwood, and Moundsville.

Strong Line-up Assured for Elgin National Road Race

Chicago Motorcycle Club Expects One Hundred Starters In Big July Fourth Event And Much Interest Has Been Aroused In Trade Teams—All Is In Readiness For Starter's Gun.

REPORTS from Chicago are to the effect that 100 of the most daring speedsters in the country will start in the Elgin national road race, to be staged under the auspices of the Chicago Motorcycle Club on July 4. One week after the entry blanks were ready forty-eight applications had been received. The Chicago club has raised $15,000 to carry through its plans, and there is every reason for believing that the program will break all records for similar undertakings in this country, and rank in interest with the Tourist Trophy classics in England.

There will be two classes, professional and amateur. The professional race will be for 250 miles, for stock machines of 61 cubic inches displacement or under. Three cash prizes are offered; $500, $250 and $100, in gold. The amateur race will be for 174 miles, and the winners will receive $250, $125 and $75, for first, second and third places. The professional and amateur races will be run at the same time.

The Elgin course will be guarded by state militia and it is expected that 100,000 persons will view the contest, especially because of the fact that it will be the first national road race to be held in America. The course is 8⅓ miles long, and with 100 riders in action at the same time it is argued that there should be plenty of excitement.

Several of the leading factories have entered teams, and it is evident that the struggle between these representatives of the manufacturers will be a desperate one. The Indian team will consist of Charles Balke and Ray Seymour, both speedsters of national reputation; Charles Gustafson, the 24-hour record-holder, and E. G. Baker, the Indianapolis flyer, who is regarded as one of the most likely candidates for the individual honors. Baker has just completed a tour of 14,000 miles and is in fine condition for such a test as the big race will impose.

Another team that is certain to be heard from is the "Yellow Pup" quartet. Chairman Hill, of the Contest Committee, has received a telegram from the Miami Cycle & Mfg. Co., of Middletown, Ohio, naming the riders who will mount Merkel machines in the big event. The team will consist of L. S. Taylor, of Middletown; Ray Snyder, of Columbus; Ray Bowser, of Chicago, and Herman Sill, of Cleveland.

Taylor is known as the 100-mile dirt track champ, and be-in ga seasoned rider he is expected to give an excellent account of himself throughout the long grind. Bowser is one of the star riders of the famous Short Grass tours, and is certain to put up a daring exhibition. Snyder will probably be the youngest speedster in the race. He is only seventeen years old, but has established such a reputation that the Merkel folks have seen fit to pit him against the nation's best. He will ride under the colors of the Columbus M. C., and a trainload of Buckeye speed fans will go to Chicago to see that he does not lack rooters. Sill is another seasoned roadster who has put enough miles behind him to make the most of every opportunity that presents itself on the Elgin course.

Plenty of Team Rivalry

The Excelsior team is announced as follows: Leslie Allen, Danny Armstrong, Ed. Bomark and Joe Wolters. George Lyons, F. C. Raff and William L. Walsh will wear the Dayton colors, and the Jefferson team will be made up of W. G. Hamilton, Ray Comstock and Rudy Thoms. One of the latest entries to be received is from Mooresville, N. C., and is signed "Gray Sloop." This entry puzzled the Contest Committe for some time and Chairman Hill was inclined to believe that someone had worked in a yacht by mistake until he looked into the matter. Then he learned that Gray Sloop is a youngster who sprang from nowhere this year and romped off with the motorcycle championship of North Carolina. Sloop will ride a Reading-Standard machine in the Elgin race, and he is being talked of as a dark horse who is likely to spring a few surprises.

The Yale "Flying Squad," made up of Ivan Jacobs, Shorty Matthews and Raymond Ray, has entered and is looking forward to big things. Considerable rivalry has been worked up, by the way, between Ray and Herman Sill, the latter of the "Yellow Jacket" team. Until recently Ray and Sill were partners in road races, both riding Flying Merkel machines, and Sill now asserts that he is going to make his old team-mate ride the race of his life. Ray smiles and says: "July 4 'll tell the story."

A huge scoreboard will be erected directly opposite the grandstand, and it will be so arranged that the spectators will be able to tell at a glance which machine is leading at any time. Miniature motorcycles will show the exact position of each rider on the course. The Warner electrical timing apparatus will be used to time and score the contestants.

Ignaz Schwinn, of the Excelsior Motor Mfg. & Supply Company, created something of a stir among the racers a day or two ago when he announced that he would give the winner an extra prize of $100 in gold, provided he is a member of the Excelsior team. Joe Wolters, of Denver, who has been ranked among the champs for several seasons, feels that he has a strangle-hold on this purse, but his team-mates, Armstrong, Bomark and Allen have yet to be heard from.

Whipple, the Motorcycle Man of Chicago, was selected a few days ago to head the board of judges, and the other officials will be chosen kithout further delay. Great care is being exercised in chosing the officials, in view of the fact that a great deal may depend upon a technicality at any stage of the race.

At any rate, the race promises to be the biggest thing of its kind ever staged in this country, and the attendance at the course will probably suggest the big automobile cup events.

SPEEDSTERS AT DETROIT

ABOVE are shown the racers participating in the opening meet at the Detroit Motordrome. Reading from left to right they are: Hubbard, St. Louis; Gibson (captain), St. Louis; Huttinger, Detroit; Fenton, St. Louis; Milner, St. Louis; Fryckman, Detroit; Klark (captain), Detroit, and Dougherty, Detroit.

NEW RESOLUTIONS

AT THE last business meeting of the National Capital M. C., of Washington, a resolution was passed whereby the club is to pay $25 to any member in good standing who may be disabled for thirty days as a result of an accident. This is in accordance with the club's policy of adding beneficial features, it recently having adopted a plan to pay $25 for the recovery of any member's machine.

Two amendments to the by-laws of the club were offered by Fred Mills, financial and recording secretary, one being that after July 1 any member who pays dues semi-annually in advance shall be charged only $4 a year.

NEW YORK - NEWARK N. J. ROUTES

BY ROBERT BRUCE

BETWEEN the west front of the Hudson river and Newark, the largest city and most important route center in New Jersey, is unquestionably the heaviest-traveled section of its area in the United States. Except that portion which goes across Staten Island, practically all of the road traffic from New York, New England and Long Island to the Jersey mainland uses one of the two options shown on the accompanying map between Manhattan and Newark, in order to get onto the through highways leading west and southwest from the latter city.

The motorcyclist coming into New York for the first time is usually surprised to discover that there is not now, and never has been, a thoroughly good highway over these few intervening miles. Primarily this is due to the meadows, which extend from the western edge of Jersey City most of the way to Newark; this cheap, undrained land has been a dumping ground from both sides. Then there has been a lack of co-operation between Jersey City and Newark, which are in two different counties (Hudson and Essex)—and at least some lapse of State pride in failing to provide a dignified entrance to the metropolis.

So the tourist gets a poor first impression of New Jersey when starting out from these Hudson river gateways, though once beyond the suburban district, the roads of the State open up surprisingly in every direction. Conditions now are much better than they were three or four years ago, and are more likely to grow better rather than retrograde from now on.

"Plank Road" vs. Turnpike

As the map shows, there are two nearly parallel routes between Jersey City and Newark—the Turnpike and the "Plank Road," located an average of a mile apart. For several years past the Turnpike has been the chief dependence of all road travelers; while never good throughout, it was always open, so tourists bumped over its uneven stretches and made the best of it, grateful that there wasn't more of it. Gradually, however, what was formerly the "Plank Road"—a name that will probably stick to it long after the last plank has disappeared—is being made the better of the two.

So far as it is completed and newly surfaced, it is in fine condition, but unfortunately both approaches are still incomplete; and these make worse riding than any spots of equal length on the Turnpike. The motorcyclist who would rather bump over a few miles of uneven, badly-pitted road than encounter two pieces of unfinished work will prefer the Turnpike; others will take the "Plank Road," making perhaps better average time on account of the speed possible on the completed stretches.

The map shows the principal connections into both, from Weehawken and Jersey City, the two most-used exits from middle and lower Manhattan. A rider coming from Brooklyn or starting from below Twenty-third street, will ordinarily find the Pennsylvania R. R. ferries from Cortlandt or Desbrosses street the more convenient; but from Long Island via the Queensboro Bridge, or from above Twenty-third street, the West Forty-second street ferry to Weehawken is more desirable. There are several turns in each case, all made clear by the detail on the maps; both lead into the Hudson County boulevard, the main north-and-south artery, from which one enters the Turnpike by Newark avenue or the "Plank Road" by Communipaw avenue.

All other things being equal, the tourist should take the "Plank Road," to avoid the most nauseating smells ever allowed between two centers of large population. Years ago extensive stock yards were established on the meadows near this road, and nearby a fertilizer factory. One is positively sickened by the nearness and vileness of the odors from these establishments, but a tourist traveling over the Turnpike has no way to avoid them.

Features of Construction

Having supposedly decided in favor of the "Plank Road," the tourist will follow down the Hudson County boulevard, passing Newark avenue (connection for the Turnpike), and crossing the viaduct above the Pennsylvania R. R. tracks. At West Side, or Hudson Park (see the map), a right turn is made, going to and turning left at the fountain, running out of the park onto Communipaw avenue. Again turn right, following the car-tracks over several blocks of stone pavement; then the trolleys come to the center, leaving on the north side a smooth surface for pleasure vehicles, and on the south side a granite block surface for the thousands of trucks that haul heavy loads back and forth.

This is an excellent arrangement, especially the attempt to divide the traffic, and provide a different surface for the two principal classes of travel. In fact the present condition of the Turnpike is due more to the constant mixed traffic than to the want of sufficient money to spend upon it. One interested in these subjects will also note the substantial protecting walls, where needed, and especially how the trolleys are separated from the road on both sides, saving many a collision; on the Turnpike the car-tracks are on the same level as the road, and accidents have been numerous.

The work on the Newark end is less complete than on the Jersey City end; and some of the planks that helped to give the road the name that still sticks to it may yet be seen. They were never meant for rubber tires, but having gone so far, it is better to go over them than turn back. It is certainly a pleasure to spin over the two bridges across the Hackensack and Passaic rivers; both are

smooth as a floor, and in striking contrast to their predecessors of bicycle touring days.

On the Newark End

You run off the "Plank Road" into Ferry street, Newark—the name suggesting the old-time highway from Philadelphia, Trenton and New Brunswick, which led over this same route to the ferry across the Hudson near Cortland street. Unfortunately, it seems necessary to have carried this important route through the factory and foundry section of Newark, making a slow, wearing ride over the stone-block pavements invariably found in such localities. Perhaps in the course of time a new connection may be developed around this "ironbound district" (as it is frequently called by its own inhabitants); but at the present time it is necessary to make the best of it, and save tires as much as possible by a moderate speed.

The first turn off from the stone pavement worth while is the one shown on the map through Polk street to Lafayette street; it will be necessary to watch for this, because the sign at the turn is inconspicuous. It is the first left-hand street after passing St. Stephan's old German church, also shown on the map; by turning left on Polk and right at the end of Polk street on Lafayette street, several blocks of asphalt are had. Then there is a fairly short stretch of stone-block pavement to the end of Lafayette street at Broad, a short distance south of the crowded business center, which this route avoids.

Nearly every tourist who has ridden between New York and Newark in the past is already familiar with the Turnpike; if not, all one needs to know about it is shown on the map. It has no novel features, and with the completion of the approaches to the Plank Road (probably several months hence), the latter will carry the great bulk of the travel, and the Turnpike will figure only incidentally in route directions. The running titles on the map show the principal connections from each into the main routes leading west and southwest from Newark.

Remarkable Photograph of A. MacDonald, Driving Excelsior Twin and Sidecar in Recent Hill-Climb of Toronto (Ont.). Note How the Load is Distributed

Various attempts have been made to provide a practicable exit from mid-Manhattan to the Hudson County boulevard and Newark through Hoboken, but so far with only indifferent success. As the map shows, such routes would be short and quick connections from a large section of the metropolis; but while possible they are yet far from desirable.

Poor Options Through Hoboken

The locally unacquainted motorcyclist attempting same should ride down to the foot of West Twenty-third street and take the D. L. & W. boat from the *right-hand slip* to Fourteenth street, Hoboken, carefully avoiding the larger boats that leave from the left-hand slip for the D. L. & W. terminal farther down the line, and separated by even worse streets from the Hudson County boulevard.

Landing at the foot of Fourteenth street, Hoboken, go straight ahead on stone-block pavement, following the trolleys to the viaduct, which can be seen shortly later leaving the ferry. Where the car tracks branch to the right and left, continue straight ahead up the slight grade on the viaduct to the end of same at the heavy stone wall, built to protect traffic on this route. Turn left, following this upper viaduct to the end of same at the Paterson Plank Road—so far nothing to complain about.

Like all other exits, however, this has its bad features—in the form of rough stone blocks on the "Plank Road," which cannot be avoided. Were there a short, good connection from the viaduct into the Hudson County boulevard, this disadvantage would be minimized; but it is necessary to go on to Paterson avenue and through that street to the boulevard, which one who has gone over it will consider hardly worth while. Until some betterment is made in that section, the majority will continue to prefer the exits through Weehawken or Jersey City already referred to.

(Editor's note: The map which appears with this article is fresh from the press and is representative of the best efforts of the American Automobile Association to provide for tourists who have heretofore been left almost entirely to their own resources in leaving or entering New York by way of New Jersey. It is undoubtedly the most comprehensive map available for the routes involved, and as such it fully justifies the special arrangement with the Route and Map department of the A. A. A. by which we have been enabled to reproduce it at this time.)

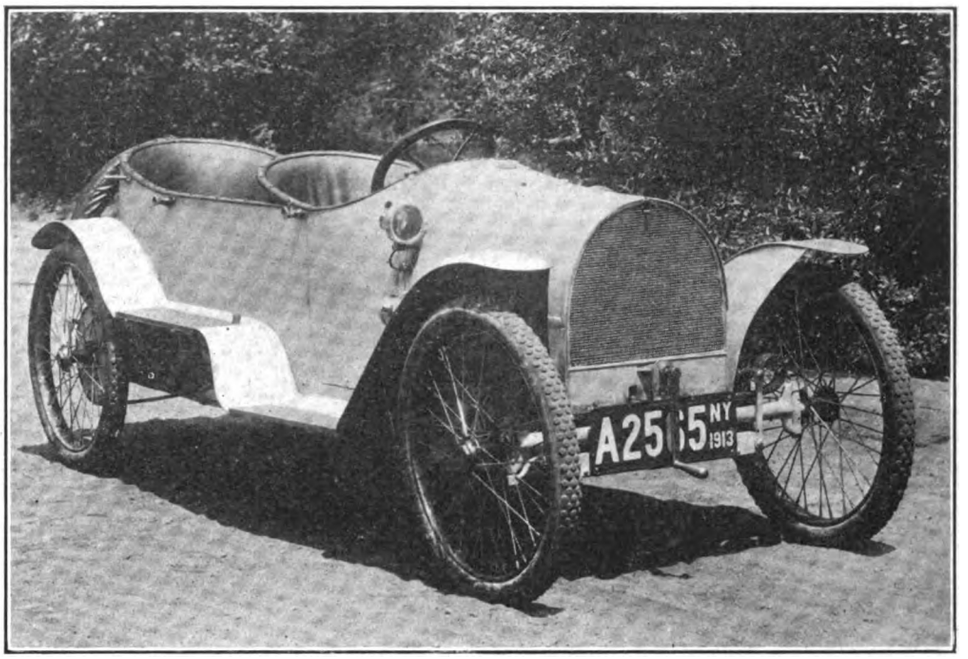
Latest "Cyclecar" Arrival Shows Some Novel Features

A NEW arrival, on cyclecar lines, that promises to become an exceptionally popular machine, is the Twombly car or motor-tandem, here illustrated. While at present fitted with an air-cooled motor, it is the intention of the designer, W. Irving Twombly, of 258 West Sixty-ninth street, New York, to employ a four-cylinder, water-cooled, sleeve-valve motor on all future cars. This motor will be silent in operation and will develop 15 horsepower, the bore and stroke being respectively 2¾ and 3¼ inches. The side-chain drive will likewise be replaced by a cardan-shaft and live axle.

While being a light car, it is by no means a toy reproduction of a large automobile, but a sound, practical vehicle. It is fitted with a selective sliding-gearset, having three speeds forward and one reverse, direct drive being on the high gear. The water circulation is thermo-syphonic, and ignition is by dual high-tension magneto. Two sets of brakes are fitted, both operating on the hubs. The springing is by cross scroll-end quarter elliptics on each corner, with balance-members to compensate for all inequalities of road, etc. The wheels are 28 inches in diameter, fitted with 6-gauge spokes and 3-inch studded tires are standard. The wheelbase is 96 inches, and the tread 36. The two seats are set in a substantial wood-panel body, colored French gray with nickel trim. A Cape cart top covering both seats can be fitted if desired, as can also a special windshield.



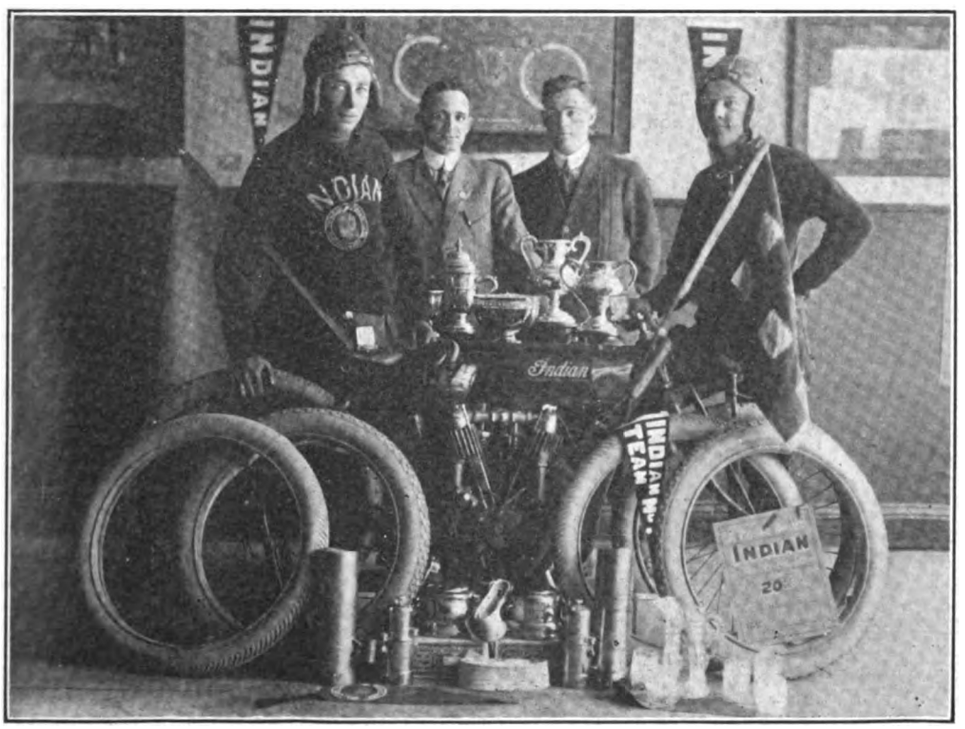
The Twombly car is priced at $350, without top and windshield. The guarantee is liberal, being for one year as regards material and workmanship, and additional to this are certificates of a speed of 60 miles per hour on the level and 35 miles per gallon of fuel. Agents' samples will be ready by September, and it is proposed to manufacture at least 1,000 machines for the 1914 season. The machine has been given numerous tests of late.

BUFFALO M. C. HILL-CLIMB

A RUN to Warsaw by way of Lancaster, Alden, Attica and Attica Center was held on June 15, by the Buffalo Motorcycle Club. Returning, the riders passed through Varysburg and East Aurora. The route covered is considered one of the most picturesque in Western New York.

GIBSON'S REPORT

INCLUDED in the last weekly report of Secretary Gibson were the following new club affiliations: Ganesha M. C., Pomona, Cal.; Sherman County M. C., Goodland, Kan.; Polonia M. C., 959 Milwaukee avenue, Chicago; Bay State M. C., Boston; West Side M. C., Springfield, O.; Newark M. C., Newark, N. Y.



Indian Team That Won Seventeen Out of Twenty Prizes at Winnipeg, Man., Recently.

STEWART-WARNER CONTEST

PROSPECTIVE motorcyclists as well as the initiated riders will find a recent announcement of the Stewart-Warner Speedometer Corporation of unusual interest. The company has started a contest wherein the contestants will have an opportunity to show their ability as judges of high-class art. They are asked to suggest an appropriate title for an expensive painting which the speedometer company has purchased. The first prize will be any motorcycle of standard make, costing $300 or less. For the three next best suggestions Stewart motorcycle speedometers will be awarded. Every motorcycle dealer in the country will be provided with copies of the painting for display purposes as well as post card reproductions for distribution. Six model D Stewart speedometers will be awarded the dealer in whose store is hung the copy of the painting which suggests the winning title. In order to make this possible all contestants, when submitting titles, should state where the picture was seen.

MERKEL LEAVES MIAMI STAFF

ANNOUNCEMENT is made that J. F. Merkel has discontinued his connections with the Engineering Department of the Miami Cycle & Mfg. Company. Mr. Merkel's plans for the future are not settled.

ON SILSBY'S STAFF

GLEN DAILY, formerly of Middletown, O., is now on the sales force of I. H. Silsby, central Ohio distributor for the Flying Merkel, with headquarters in Cleveland.

CONTRACTS have been signed for the erection of a plant for the Gordon Rubber Company, of Canton, O. The plant, which will consist of two buildings, will be located on Williams street.

ECLIPSE

You Can't See Around A Corner

You can never tell what danger may be lurking just beyond the curve in your path. A wash-out, a partially destroyed bridge, a fast approaching railroad train, a deep ditch or any of a thousand and one hazards which the motorcycle rider must expect and for which he msut be prepared. That rider is best armed against accident whose machine is equipped with the

Eclipse

Perfection Multiple Disc Brake

Terrific gripping power, tremendous strength, marvelous durability, unfailing reliability—these features make the Eclipse worthy in every way of the title "The Brake You Can Trust."

With its 100 square inches of braking surface, the Eclipse Perfection Multiple Disc clutch is stronger, in proportion to the load, than the strongest automobile brake made.

Its six discs, each 5¼ inches in diameter, distribute the weight of a 350 lb. motorcycle so that there is a square inch of braking surface for every 3½ lbs. No automobile brake is made large enough to distribute less than 9½ lbs. over each square inch of braking surface.

What further proof do you require of Eclipse reliability?

MOTORCYCLE ILLUSTRATED

Published every other Thursday at 51 Chambers Street, New York. Home subscriptions, $1.00 a year; foreign, $2.00; 10 cents a copy.

TELEPHONES 3690 AND 3691 WORTH.

Entered as second class matter July 6, 1908, at the Post Office at New York, N. Y., under Act of Congress March 3, 1879.

J. LEO SAUER, President.

H. N. CONDICT, Secretary.

WESTERN REPRESENTATIVE:

HARRY G. JACOBS

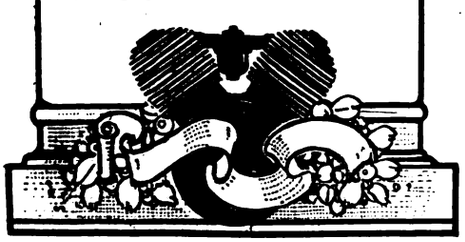
1220 First National Bank Building, Chicago. Telephones 5908 Central and Randolph 1022.

PAID CIRCULATION THIS ISSUE, 13,740.

OWING to its large circulation, it requires two full days of 24 hours each, after the last form has closed, to print, bind and mail a full edition of MOTORCYCLE ILLUSTRATED. In view also of the fact that this publication is read in more than 2,400 different cities, towns and villages in the United States, its wide distribution demands that each issue be placed in the mails not later than noon every other Thursday, the date of publication. In order to make the mails at this time, forms must close not later than 6 p. m. Tuesday, and advertising copy cannot, therefore, be handled if received later than Tuesday morning.

This applies also to text matter. Photographs should reach us not later than Monday morning preceding each date of issue. They will be given better attention if reaching us the Saturday preceding.

MOTORCYCLE ILLUSTRATED requires correspondence and subscription agents in many towns where the paper is not already so represented; we pay a liberal commission to subscription agents, and the best space rates for text-matter, drawings and photographs.



EDITORIAL VIEWPOINTS

BOTH the Indiana and Ohio F. A. M. State Conventions were well managed and well attended, notwithstanding which fact neither demonstrated the need for a more democratic form of government than the members of the Federation enjoy at the present time. In other words, the howl, which has lately gone forth from certain isolated quarters, demanding that individual members be given more authority has by no means resulted from a thorough appreciation of the wants of the general membership. Experience teaches that in an organization like the F. A. M., no matter how many and how attractive may be the opportunities afforded individual members to participate in governing a national body, very few exercise their privileges. Even among those who attend conventions, a majority can always be counted upon to prefer the entertainment program to the business sessions, and these are invariably the men who afterwards complain of "star chamber" methods, the existence of a "close corporation," "control by a chosen few," and so on *ad infinitum*.

It is our opinion that the average member of a body like the Federation holds benefits above representation. He's willing to contribute his mite per annum, but he does not feel called upon to do any more than that. Only a small proportion of riders even belong to the local clubs, and of those who are members, in each instance but a handful do the work. The others simply pay dues, and continue to do so as long as they are satisfied with the returns.

Believing that this attitude is general toward the F. A. M., it is our opinion that the organization would grow faster and accomplish more if run like a business instead of as a democracy. Let the directors be elected by the members of the districts they represent, and then have the directors appoint a chairman or business manager whose term of office would be indefinite—as long as he makes good—and whose salary would be whatever he was worth to the organization.

Once in office, this individual would shoulder all the responsibility while, on the other hand, he would be amenable to the directors only, whose privilege it would be to remove him at will, in the event of his failing to produce satisfactory results—in other words, to prove his worth and earn his salary.

The directors, in their turn, would hold office only as long as their services were desired by those whose votes elected them. At the same time, the present division of responsibility would no longer stand in the way of the development of the organization along strictly business lines. More could be accomplished with the same amount of money and, as long as each member desired benefits commensurate with the amount of his investment, there would be no complaint from any quarter.

Ultimately the Federation will adopt this or a similar plan. And then its progress will be tremendously rapid and solidly substantial. We are now obtaining valuable experience and there are indications that the time is near when we shall profit by it.

LIVING UP TO A PREDICTION

A CASUAL review of the past month will bear out the prediction, made while the year was still young, that 1913 is destined to set new marks for American motorcycledom, in sporting and social as well as trade branches. Two F. A. M. State conventions were held during June, and plans were completed for another. The Los Angeles M. C. held its ten-day Sunset Ramble, crack speedsters from all over the country were signed up for the Elgin National road race to be held July 4, at least ten endurance runs were staged, hill-climbs and social outings were held by the dozen and the board tracks have been drawing capacity crowds. All this in June, when motorcyclists are only swinging into their gait for the season. Before the leaves begin to turn in October there will be a story of progress in all directions well worth the telling.

OUR FIRST NATIONAL ROAD RACE

ONE hundred unmuffled exhausts cannonading over the Elgin course in the Chicago Club's road race should furnish something very closely approaching an old-fashioned Fourth of July celebration. Aside from the noise, however, the program will be as "safe and sane" as the club can make it, and this means a great deal. Expense has not been spared in the effort to protect both racers and spectators.

A BIG contest is fruitful not only in proportion to the number of entrants and the enthusiasm aroused, but upon a basis of wholesome and cumulative interest developed among non-riders. Serious accidents are not recruit-makers. All that human ingenuity and broad-gauge plans can do to protect both racers and spectators has been done by the Chicago Club, and it remains simply for the contestants to keep in mind that there is a limit somewhere for daring and even the best of man-made mechanisms.

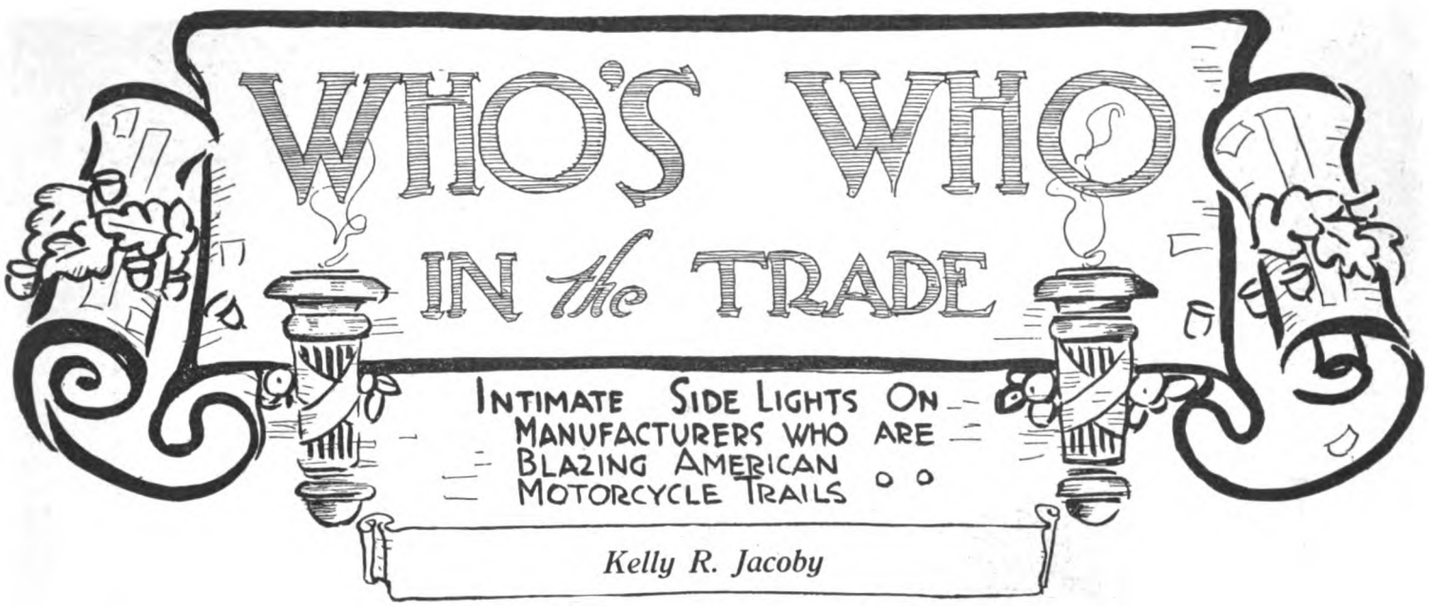
KELLY R. JACOBY

Digitized by Google



"It is the Men of Action, Not the Men of Reflection, Who Get the Joy Out of Life"

THIS motto, hanging over the desk of Kelly R. Jacoby, president and general manager for the Miami Cycle & Mfg. Co., at Middletown, Ohio, is interesting because it is so closely allied with the makeup of the man in whose office it hangs. Kelly R. Jacoby is one of the big men in the motorcycle industry, and his bigness is reflected pretty generally in the things he has accomplished. His career—from the time he started—if set forth in minute detail, would serve as a splendid example for ambitious young men.

In common with the majority, Mr. Jacoby believed that a college education was an essential foundation for a business career, and like Judge Taft and other men in the public eye he acquired that foundation at Yale. After finishing at Yale, Mr. Jacoby returned to Middletown—his home—without a very definite idea of what his life's work would consist of, although he had several plans in view.

When the Opportunity Came

It was not long before the big opportunity came, although it did not look very big at the time. The Miami Cycle & Mfg. Co., as makers of the Racycle bicycles, was started by the late P. A. Sorg. This bicycle plant was Mr. Sorg's pet project, although he had many other more profitable institutions. After Mr. Sorg's death his widow continued to run the business under different managers, more for the sake of associations than for the profit it was paying. In fact, the business was being run at a loss, and when Mrs. Sorg offered the managership to Jacoby she would have been pleased if he simply did not let the deficit become any larger. But he did better than that.

To make a long story short, Mr. Jacoby rolled up his shirt sleeves, literally and figuratively, and plunged into bicycle making. He found out just why the business was being run at a loss, and the first thing he did was to cut off all loose ends. Instead of merely cutting down a deficit, the very first year under Mr. Jacoby's management showed a nice profit, the next year a still larger one. Today the Miami Cycle & Mfg. Co. is one of the biggest concerns of its kind in the country, and within two months will have two factories, employing nearly two thousand men—all this through K. R. Jacoby's guiding hand.

A Believer in Outdoor Exercise

Mr. Jacoby is a young man, considerably under forty, and without doubt the most active official in the Motorcycle Manufacturers' Association, of which he is vice-president. When he is not at his desk, Mr. Jacoby's chief thought is to get physical profit from exercise. He pilots a big six-cylinder Chalmers like a race driver, and also knows how to ride a motorcycle—and does it sometimes. He admits, however, that he did not learn to ride until the Miami Cycle & Mfg. Co. purchased the Flying Merkel and moved the Pottstown plant to Middletown.

Mr. Jacoby is a firm believer in outdoor exercise. He is a great walker, runner and ball-player, and can box and wrestle like a champion, as some of his less athletic associates will testify. He is at this moment figuring on installing a summer gymnasium on the roof of the Middletown plant for the benefit of the officials and office employees, but some of those who have boxed a round or wrestled with him, are not so keen over the project as Mr. Jacoby himself.

It has already been stated that President Jacoby is a young man. He is more than that—he is a believer in young men, and every man under his official jurisdiction has a splendid opportunity for advancement.

Everybody around the Miami plant knows when Mr. Jacoby is in his office. From the minute that the president steps into his private office things begin to hum—and continue humming until the whistle blows at 5:30. It is surprising the number of details that President Jacoby familiarizes himself with. Not only is he a born executive from the financial viewpoint, but he knows mechanical details as well.

Perhaps one of the secrets of Mr. Jacoby's success is that he keeps in close touch with his associates. Conferences are held every day with the heads of various departments, and in this way President Jacoby always has every detail of the business at his fingers' ends.

Proud of His Organization

Although he works like a whirlwind during business hours, Mr. Jacoby believes that "all work and no play makes Jack a dull boy." One of his associates tells a story of how he was threatened with dismissal if he didn't stop coming back to the office and working at night. Mr. Jacoby believes thoroughly in work, exercise and sleep, for he knows that plenty of the latter two will produce keener minds. He is naturally proud of the Miami organization and well may he be. Apropos of this feeling of pride in the big Middletown industry he tells a bully story at his own expense.

Mr. Jacoby was at a hotel recently and after the introductions one of the men at the table turned to Mr. Jacoby and inquired:

"Pardon me, but didn't you say you were from Middletown?"

"Yes," replied the president of the Miami Cycle & Mfg. Co. and vice-president of the M. M. A.

"Which Middletown?" continued the questioner, "Ohio, New York, or Connecticut?"

"Ohio, of course!" said Jacoby.

"Oh, yes, yes, to be sure. They've got just three things in Middletown!"

"Have they?" politely interrogated Jacoby, feeling certain the man would mention the Miami company as one, the American Rolling Mill as another and perhaps one of the big tobacco plants or paper mills as the third, but with a view of hearing someone else remark about the Merkel plant its president inquired:

"Three things, what are they, may I ask?"

"Morning, noon and night!" said the man, and in the laughter that went up around the table, Jacoby heartily joined.

TWO-COUNTY MOTORCYCLE CLUB

CARL FUTTERER, Ray Menke and Joseph Esler, members of the Quincy (Ill.) Motorcycle Club, recently made a run to Mt. Sterling for the purpose of organizing a club there. They were met at Camp Point by three motorcyclists of Mt. Sterling, where the party arrived at noon. In the afternoon a meeting was held and the Adams-Brown County Motorcycle Club was formed. Ollie Jennings was elected president; Ray Menke, vice-president; R. L. Webber, treasurer; Carl Futterer, secretary, and Joseph Esler, captain.

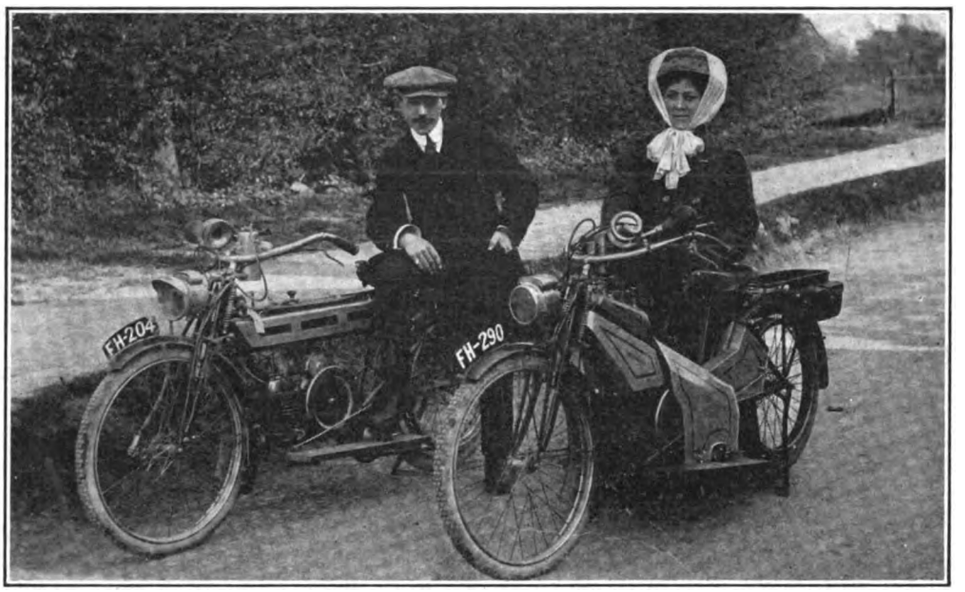
The LADY MOTORCYCLIST

By NORA HOUGH

JUDGING from my observations a great many men vote the lady motorcyclist something of a nuisance, and for some time past I have been puzzled as to why this should be so. Men riders certainly cannot hope to keep this delightful sport to themselves for all time, and in my opinion they should rejoice over the fact that their wives, sisters and sweethearts are displaying interest in such a healthful pastime. The girl who uses a motorcycle consistently and with reason benefits physically, and assumes no greater risk on the road than would attend an ordinary trip in an automobile.



Mrs. W. B. Gibb, of Gloucester, England, is the lady rider in the accompanying photograph. Mrs. Gibb is a keen Douglas enthusiast who uses her machine for daily trips over the hilly country around her home. Her husband, "also in the picture," is one of the most successful English riders in general competition. Note the shields fitted to protect the rider.

A short time ago I received an extremely interesting letter from an American motorcyclist who is quite in favor of girls joining in the sport, and who believes that we should also master the common technique of the motor. In other words, he argues that we should be prepared to make any light repairs on the road, and thus guard against the possibility of being left helpless because of some trivial breakdown.

I quite agree with this writer. I do not wish to flatter my sex by arguing that we are as apt in picking up mechanical details as the men, but we certainly could learn to make our own adjustments and minor repairs and so keep our machines in good running order.

GETTING ACQUAINTED WITH THE MOTOR.

In my opinion the easiest way to study a motor and get acquainted with its various parts is to watch a friend or a repairman's mechanic take one of the power-plants down and overhaul it. This will assist the observer in obtaining a clear impression of the parts, and why it is necessary to have them where they are. Until these details are fairly clear in the mind of the lady rider it is obvious that she cannot be expected to tinker with the motor advantageously. Even after watching several take-downs she must proceed with caution, and I have found it a good scheme to strip a motor and then attempt to put it together again. For the first few attempts the novice will have a surprising collection of parts left over after the motor has apparently been put back in running condition, and it will be necessary for a mechanic to explain where these belong and why. Then the lady rider may make another attempt—and so on until she is capable of removing or replacing any part of the engine. This is not the most pleasant kind of work for the fair motorcyclist, but it is more interesting than would appear at a glance, and the practical returns from it are worth while.

Two Lady Riders Turning a Nasty Bend in a Recent English Reliability Trial.

A working knowledge of the motor breeds confidence, and I am personally acquainted with a number of lady riders who would not hesitate to make a trip of any length with the understanding that they would have to make all their own repairs along the way. In our English competitions we have quite a few lady entrants; in fact, we scarcely hear of a competition—especially a reliability trial—without one or more feminine riders entered.

In all these events the rule invariably is that any rider accepting assistance—even from a passenger in a sidecar—will be disqualified, and as our ladies rarely fail it is evident that they must be able to care for their own machines. This should prove that the motorcycle and its motor are not very difficult to master.

HELP IS USUALLY AT HAND.

As a matter of fact, I have found that in case of a breakdown on an ordinary trip I would not have to wait along the road very long before other riders would appear and offer assistance. Sometimes this is quite acceptable—especially if one is traveling with a light tool-kit—but I have also noted that the men take a better view of the situation if the girl rider is sufficiently informed to help in the repair work. The girl who simply throws herself on the mercy of the first male rider who happens along, and then stands about idly while the work is being done, does not create a favorable impression.

The men are willing to help us, but they are also prone to go away and remark that a motorcycle is no vehicle for a woman until she knows how to operate it. Therefore it is well to have all the practical information possible so that we may "hold up our end," as you Americans say.

Worcester Run Proved a Terror for the Tenderfeet

Greasy Hills And Damp Sand Pulled Down Many Promising Scores In 24-Hour Endurance Trial And Puzzling Schedule Added To Woes Of Riders—Returns Are Not Yet Complete.

WORCESTER, Mass., June 23.—In the opinion of the 42 starters in the 24-hour endurance run of the Worcester Motorcycle Club, June 21-22, it was the stiffest twice-around-the-clock event ever held in this country, and after liberally discounting their appraisal, it can truthfully be stated that it was no pink tea function. Half of the 42 finished before the control was closed Sunday night, and some of the fallen ones are still in the mountains, it is believed.

These were the starters in the order of their numbers: Frank D. Johnson, Harry B. Lake, Roy Dow, Howard L. Clark (Indian); Carl P. Thomas, Stanley Fountaine, Leo W. Ludden, Andrew T. Moore (Henderson); Robert R. Reid, Ernest Marble, Robert Cooke, Jr., Warren E. Loring, Edward L. Plympton, Wm. S. Bunker, Ralph Corey, John Livingstone (Excelsior); Paul M. Brown, Nelson Robinson, Forrest L. Kidder, Gustave Johnson, Leon E. Crooker, Geo. W. L. Clarke, A. B. Varnum, Earl Gove, A. H. Bachilder (Indian); Mark J. McCann (Dayton); A. E. DeLong, Edward Cadarre, A. L. Hawkes (Indian); W. H. Tannebring (H-D); E. L. Mills (Thor); W. F. Cornwell (Excelsior); B. C. Thayer (H-D); A. Zimmerman (Indian); E. W. Padelford (H-D); Arthur LaRoe (Indian); A. P. Madison (Excelsior); W. H. Burnett, Earl N. Goff, Clarence Loftes, N. Brosler, W. F. Halliday (H-D).

The following were checked in at the finish before the control closed: Frank D. Johnson (Indian); Roy Dow (Indian); Wm. S. Bunker (Excelsior); Ralph Corey (Excelsior); John Livingstone (Excelsior); Paul M. Brown (Indian); Nelson Robinson (Indian); Forrest L. Kidder (Indian); Gustave Johnson (Indian); A. H. Bachilder (Indian); Edward Cadarre (Indian); A. L. Hawkes (Indian); W. H. Tannebring (H-D); E. L. Mills (Thor); W. F. Cornwell (Excelsior); B. C. Thayer (H-D); A. Zimmerman (Indian); E. W. Padelford (H-D); Arthur LaRoe (Indian); W. H. Burnett (H-D); Clarence Loftes (H-D).

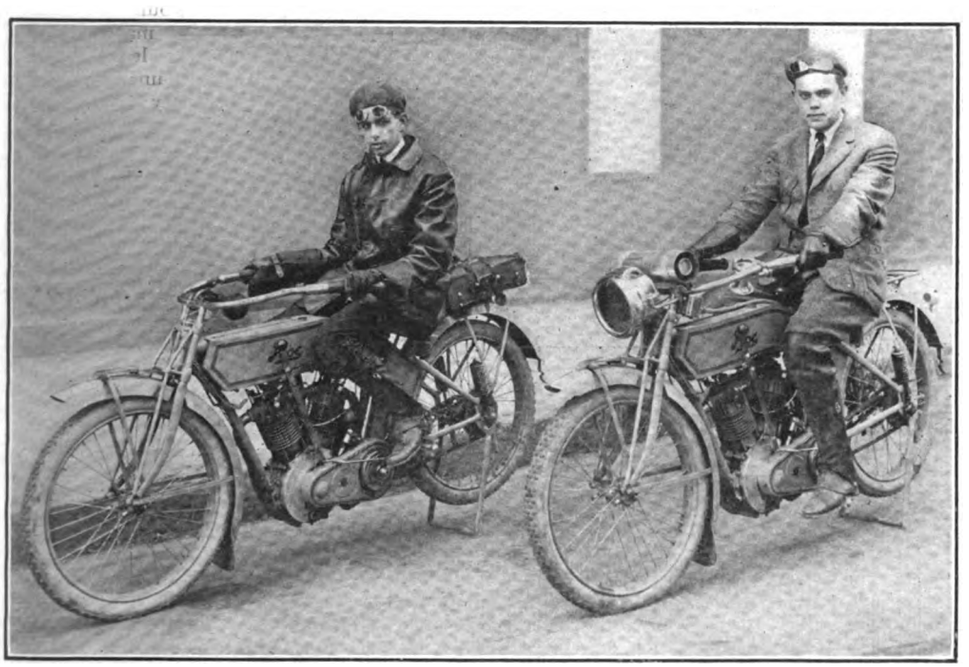
There were quite a few seasoned riders competing, in addition to the usual flock of novices, and naturally the mortality was greatest in the latter class.

The course led into the heart of the White Mountains of New Hampshire, Bretton Woods being the outward termini, and the total distance was 430 miles, according to the entry blank. However, several riders claimed that this mileage was less than that registered by their odometers. The night schedule was given as 15 miles per hour, and the day schedule, 22 miles per hour, but as a matter of fact the riders had to maintain a faster gait all the time to make controls on schedule, which bears out the assertion that the actual mileage was greater than the figures given on the entry blank.

As all checking sheets are not in, it is impossible to state positively who made perfect scores, or are entitled to medals. The official results will be known about the end of the week, but at this writing it seems pretty certain that the team prize has been captured by the second Indian team, composed of Brown, Robinson, Kidder and Johnson, this being the only team to finish complete. It is reported that two or three who finished did not check at certain controls, and will be disqualified, which will, of course, alter the final result.

There were five teams competing, as follows: Brockton Indian team—A. B. Varnum, captain, Earl Gove, W. L. Clark, Leon Crooker. Worcester Indian team—Howard Clark, Frank D. Johnson, H. B. Lake, Roy Dow. Brockton Henderson team—Leon W. Ludden, captain, Andrew T. Moore, Carl Thomas, Stanley Fountaine. Worcester Excelsior team—W. S. Bunker, captain, E. L. Plympton, John Livingstone, Ralph Corey. Harley-Davidson team—Clarence Loftes, captain, Earl Goff, E. W. Padelford, W. Tannebring.

Worcester had a young cloudburst late Saturday afternoon which wet down the roads quite satisfactorily for the riders. In fact, it looked threatening overhead when 8 o'clock arrived, and several of the riders slipped on their raincoats and ponchos, but this precaution proved needless. The only rain that fell during the contest was a few drops near Lowell. The men were sent off from Franklin square in squads of four, three minutes apart, and for more than a block were forced to ride through a deep lane of people composed of the usual Saturday night crowd. Several policemen were detailed to assist in dispatching the riders. It was about 8:30 p. m. when the last squad left, and then speculation began on the result.



STANLEY F. WITHE, of Springfield, and Walter M. McKim, of Brookline, Mass., students at Harvard, left Boston on June 14 for the first leg of a motorcycle tour that will carry them to Europe, and to most of the points of interest along foreign touring routes. Mounting Pope twin motorcycles, the boys headed southward from Boston with Savannah, Ga., as their destination. At Savannah they took passage for Liverpool.

On the way to Savannah the tourists stopped at Baltimore to visit relatives of Mr. McKim, and late bulletins were to the effect that their jaunt into the Southland was entirely satisfactory. On arriving in Liverpool the boys will ride to London, where they will attend the annual dinner of Harvard men at Piccadilly Circus, July 10, they having received an invitation to be present through former Ambassador Robert Bacon. From London they will ride to Dover where they will board the channel boat for Calais, and here they will enter upon the longest stretch of their trip. They will proceed to Paris to spend some time with relatives and will then ride as far southward as Lake Lucerne, where the trip over the Alps will be started. In Brenner Pass the tourists will encounter some rather startling going, there being one straight climb of about 20 miles to try out their motors.

THE "AUTOCRAT" ON THE JOB

THOMAS M. DUNHAM, of the Greyhound Motor Company, was in attendance at the Ohio State meet in Cleveland last week. Dunham was demonstrating the new Autocrat sidecar, manufactured by the Greyhound Company which, attached to a Yale machine, he had ridden from Buffalo, by way of Erie, Warren, Meadville, Youngstown, and Ravenna. He left Monday afternoon for Detroit. The new model, which looked like new despite its rather strenuous trip, attracted no small measure of attention everywhere.

R.-S. DISTRIBUTORS

THE Badger State Motorcycle Company distributes the Reading-Standard in Wisconsin. The company is making a strong bid for popularity through an energetic selling campaign throughout the State.

SIDECAR LAMP SYSTEMS

By W. T. MILBURN

LIGHTS on any moving vehicle perform two functions, both of which are safeguards to all users of the road. The first is that of illuminating the road so that the way may be seen and accidents avoided, and the second is that of indicating to others the presence of the vehicle and to prevent collisions, etc. Most owners fit lights which carry out the first function, but not everyone considers the second requirement seriously enough. It is all very well to attach a lamp to the motorcycle, but safety demands that the lighting equipment show the full width of the vehicle, as well as its situation on the highway.

Where the increasingly-popular sidecar is used, the ordinary head and tail-lights are insufficient; there is no way for an oncoming road-user to distinguish such an outfit from a solo motorcycle or a bicycle for that matter. If all vehicles were provided with adequate headlights, the necessity for defining lamps would not exist, but we probably will not find this ideal condition for the next century or so. It is a case of protecting the rider and passenger from the negligence or recklessness of others as things stand at present, and the real need for at least two lamps on a sidecar outfit can be appreciated when one has gone through an experience such as the writer had last Spring.

A Narrow Escape on the Road

While driving along the Boston Post road on the way back to New York City it was found that the sidecar lamp had a broken burner and only the motorcycle headlight and tail lamp could be used. We decided that chances must be taken and drove cautiously, as there were a number of places where the road was torn up at one side, leaving only about 5 feet of clear roadway. On entering one of these narrow stretches, the writer (who was driving) saw two headlights coming along side by side, and not knowing whether it was a motorcar or two motorcyclists, pulled up and halloed. "It's all right," came back the answer, "keep straight ahead; we'll pass on both sides." The passenger sung out that ours was a sidecar outfit just as the right-hand rider discovered the fact and set his brake hard. Fortunately only the nose of the sidecar body was dented when the bump came, but we were treated to some bitter language for not having lights to show how wide our outfit was. When we measured the road later there was only a foot of space to our left where the first rider could have passed the sidecar, so the passenger and the other rider might have been seriously injured as they would have met head-on. The second rider was in the wrong in suggesting passing on our left side, but just suppose that he had tried to pass without announcing his intention! Since then, a spare burner has been carried in the driver's coat-pocket on all night trips.

How the Lights Are Arranged

The arrangement of lights on the sidecar mentioned above is as good as any that the writer has seen so far. The sidecar or body-light is fitted at the extreme right of the outfit, but with its rim on line with the hub-cap of the sidecar wheel so that if the lamp will "clear" an obstruction the sidecar will pass by also. The light is placed on the nose of the body and higher above the ground than a lamp carried on the fork-side of a motorcycle, to eliminate all possibility of mistaking the lights for those of two separate vehicles. Recently a top sector of green glass has been put in the lamp front to further attract the attention of oncoming drivers, following the French automobile law. Riders and car drivers who have been met on the road at night invariably say that they class the lights as those of a sidecar or light automobile as soon as they see the second light with the green sector. While this green sector idea is excellent, it is by no means necessary, the two headlights being sufficient if the width of the outfit is defined.

If there is only one tail-light fitted, the rider should keep well over to the right side of the road rather than on the crest, where there is a possibility of being overtaken. There are riders and drivers who take chances of passing on the wrong side when overtaking, just as well as when coming on, and as rather reckless riding was prevalent until recently in the territory where the writer left most of his wheel-tracks, two rear lights were fitted. The second one was mounted on the back of the body, well up, so that luggage would not obscure it, but after it was knocked off several times it was discarded and the motorcycle rear lamp only was used. While a license plate is not necessary in New York, there is one fitted, with a side ray from the tail-light showing it up and aiding in the car-like appearance of the outfit. In general, the lights which are necessary for riding the machine solo can be used, with the additional sidecar headlight when the car is coupled up. This brings us to the question of the lighting medium and its supply.

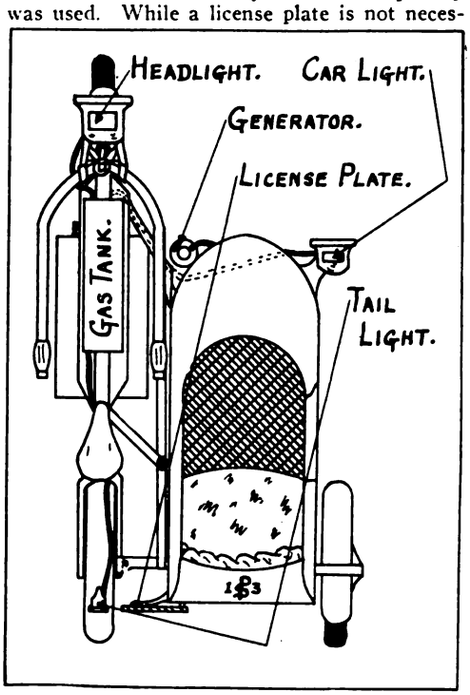

Diagram of Lamp Positions.

A Good Word for Acetylene

The writer prefers acetylene to any other means of lighting. He has had more experience with it than with electricity, and has probably been unfortunate in the bulbs and batteries that have been provided for his use. Considering the requirements of a healthy 8-horsepower sidecar outfit, a small generator or dynamo and 20-ampere-hour battery have been insufficient for any more than moderate speed at night. The dynamo which gave the greatest satisfaction for this outfit was an experimental car outfit, weighing 34 pounds, and of course it was a monstrosity for motorcycle use. Lack of time and opportunity to try out more than three pieces of apparatus this season has caused him to miss some excellent devices without doubt, but as the situation stands, acetylene is preferred.

After some consideration, two separate lighting units have been fitted, one to the sidecar and the other to the motorcycle. This is because some of the club members have the privilege of using the car when the writer goes solo, and not having a three-way connection for their gas tanks or a sufficiently large generator, as the case may be, they can use the separate sidecar generator, which is mounted as in the first figure. The plan of having the generator and lamp on opposite sides of the nose of the body gives a sort of balance to the unit, the tubing is short and the generator gets the benefit of the air currents as the outfit travels. In the same figure will be seen (dotted line) the rubber tube that can be led from a three-way connection near the gas tank to the lamp teat, this being substituted for the separate generator if desired. The tank has ample capacity for three lights, but the sidecar when detached would then be without a lighting supply. Hence, the gas tank supplies the motorcycle lights and the generator serves for the body headlight. Each lamp and supply thus has its own means of control.

Wiring for Electric Lighting

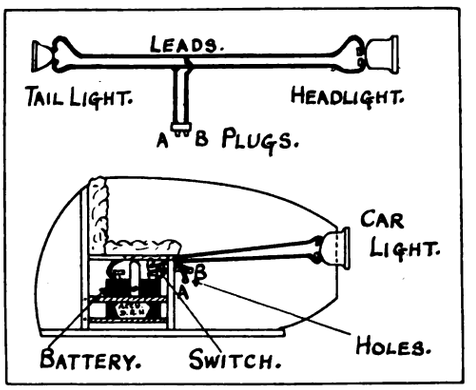
Where electric lighting is used, space rather necessitates the placing of the battery on the sidecar. When either dry or storage cells are used, the best location is under the seat and firmly fastened in place by iron or steel bands or a framework. In a coach-built car the battery should be accessible from the seat by lifting the cushion, and the switch itself should be protected like the battery by being located close to it. On several battery-lighted sidecars seen recently, the switch was placed near the door where it was very handy —too much so, in fact. The passenger could knock the switch blade off contact with his

Digitized by Google

knee or break the whole switch off; a pump or other metal object on contacting with the blade would cause a short-circuit, and lastly there are lots of people of all ages who like to twiddle knobs and are tickled to death to see something happen as a result. Consequently, the batteries so controlled do not last long, and it is better to undergo a little more inconvenience in lifting the seat cushion than to be confronted with a "dead" battery some night, a score of miles from home. A diagram of the wiring for a sidecar outfit is shown in the second figure. When the sidecar is detached, the plug A-B is withdrawn from the sidecar socket.

Gas Tank Equipment

Where the gas tank is used exclusively as a lighting source, there are several positions in which the tank can be carried. The first is that usually recommended: on the top tube of the machine, and the piping is shown in the first figure. The second is on the frame of the sidecar, at the rear. This is an excellent place, but has the disadvantage that when the machine is used solo the tank has to be removed for fitting on the top tube. Another point is that when touring it may interfere with the luggage, unless the riders travel with the traditional tooth-brush and comb only. It will be noticed that the tubing is carried up the sidecar braces to avoid pinching and undue vibration, there being clips with arches to bind the tubes at the various points. The writer uses iron pipes on the sidecar and rubber tubing elsewhere, especially at points where the lamps are connected. There is no doubt that all tubing could be rubber or part copper and part rubber, but iron pipes stand up better and cannot be pinched.



Outline of Wiring for Electric Lighting System, Showing Storage Battery Placed Under Sidecar Seat. It is Out of the Way, But Accessible.

MORE MACHINES STOLEN

TWO Harley-Davidson motorcycles are reported missing. One belonged to Melvin Groves, Box 787, Clinton, Ind. The engine number is 7177. The other was the property of the Missouri & Kansas Telephone Company, of Kansas City, Mo. The latter machine was taken on Decoration Day; engine number, 9161-B.

Does a Copper Surface Fight Off Carbon Deposits?

English Motorist Found Copper Spark Plugs Clean Although Pistons And Cylinder-Heads In Same Motor Were Heavily Encrusted—Interesting Possibilities Suggested By New Theory

AN English motorist while dismantling a three-cylinder, air-cooled motor, which was fitted with a copper plug in the top of each cylinder, discovered that the plugs were practically clean, although the cylinder heads and pistons were heavily encrusted with carbon, and was unable to account for these conditions except through the fact that the plugs were of copper. In calling attention to his discovery he suggested that if the tops of the pistons were copper plated also they would be kept free of carbon deposits, proceeding upon the theory that the copper surface was not readily susceptible to the accumulating of carbon.

The matter was taken up by *The Autocar*, an English automobile journal, and was dealt with later by *The Motorcycle* in an article from which the following is an extract:

"A statement of the case was submitted by *The Autocar* to an analytical chemist, who is also a practical motorcyclist and motorist. The summary of his opinion is that the absence of deposit on the plugs is due to the copper always being at a considerably higher temperature than the cast iron cylinder. Unfortunately, he points out that plating a piston with a deposit of copper would not have the same effect as if the piston were made of the solid metal, because it would only change the surface of the metal. It is interesting to note, however, that the copper gets so hot that soot or carbon soon burns off, and for this reason the chemist referred to thinks that this accounts for the sparking plug being rarely coated with carbon deposit, because it is surrounded by a large bulk of metal (usually gun-metal) in the form of the valve cap, which cannot cool quickly enough to allow the deposit to form. This brings up the question whether an alloy could not be used for piston heads, or separate combustion heads, which would have an effect similar to copper?

"There is one item in this interesting article which does not seem to bear out our experience, and that is in connection with motorcycle engines six or seven years old. The writer says that these engines were far freer from deposit than modern motorcycle engines, because they were always running with their exhaust valves red hot, so that no deposit could form. Although it is probable that, with improved carburation and better designed exhaust passages, modern engines keep cooler than those made six or seven years ago, we are still of the opinion that the exhaust valve is usually nearly red hot, but that does not prevent a large amount of deposit forming."

How Tourmaster McLain Will Lead the Indianapolis F. A. M. Division Westward to Hutchinson to Join the Short Grass Squad on Tour to Denver.

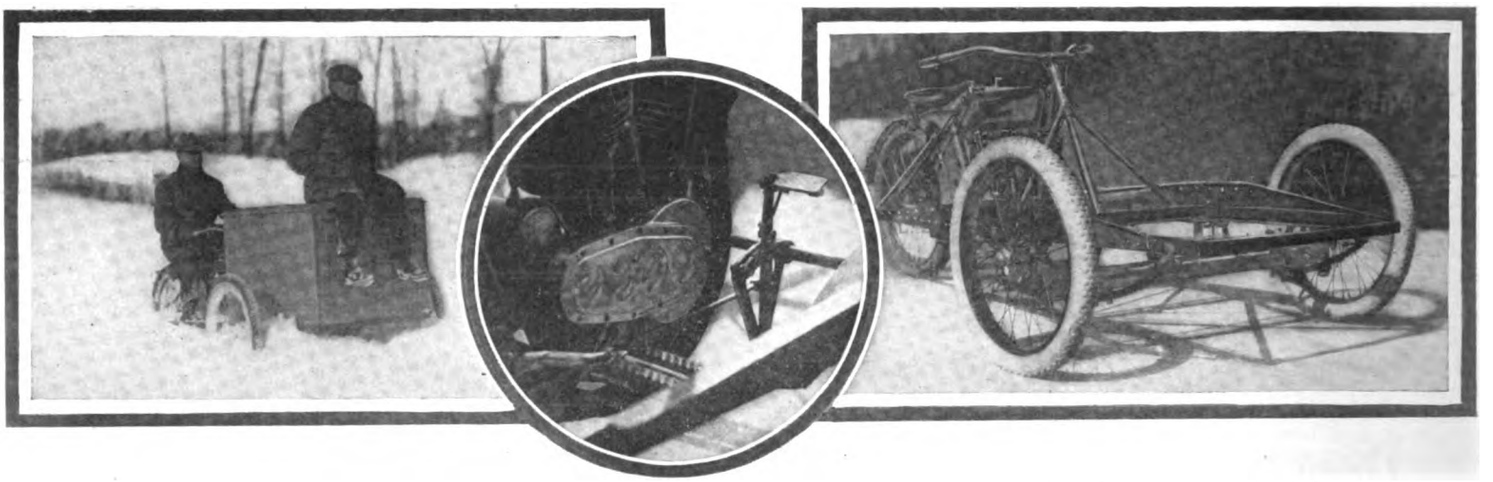
New Harley-Davidson Motorcycle Truck Is Ready

Exhaustive Tests Prove That Commercial Three-Wheeler Combines Remarkable Sturdiness With Mechanical Simplicity and Economy—Parcel Post Trial Pleases Milwaukee Postmaster.



The Truck Undergoing a Severe Winter Test; the Sturdy Power Plant; Stripped Chassis, Showing Unusual Strength of Construction.

ONE of the most interesting announcements made in some time from the Harley-Davidson headquarters concerns the company's new motorcycle truck which is shown in the series of photographs on this page. The truck has been in process of development for some time past, and the company has refrained from giving it publicity until it measured up to every expectation. It does this now—and with something to spare. It is stanch, speedy, roomy, economical and so simple in operation that even a novice can obtain uniformly satisfactory results with it.

The truck body is 2 feet 10 inches wide, 3 feet 6 inches long and 2 feet 4 inches high. The wheelbase is 76 inches and the tread is standard, 56 inches. The last-given point is important, as it means that the vehicle will track perfectly on any road. The twin motor develops 8 horsepower, and being equipped with the Harley-Davidson two-speed gear it affords a ratio of 5 to 1 on high speeds and 10 to 1 on low. With the maximum load the truck can be started easily in mud or snow and on heavy grades. With a full load it can be driven at any speed from two to thirty miles on hour.

The operator can step from the curb to the machine and start without the slightest trouble, and with the rear wheel always on the ground. The machine is equipped with the well-known Harley-Davidson free-wheel control. It is fitted with an internal expanding brake 7 inches in diameter and operated by a foot pedal. The face of this brake is seven-eighths of an inch, thus giving plenty of friction surface. Well-designed mudguards protect the driver so that the machine can be used regardless of weather conditions. Of special interest also are the chassis and steering knuckles of the new motorcycle truck. The former is built of pressed steel of open-hearth stock, heat treated, with cross braces under the body and side stays to the rear wheel so that none of the strains of the load are communicated to the engine frame. The chassis follows the practices that have been found most satisfactory in automobile construction, and the steering knuckles have ball bearings at the top and bottom to facilitate the handling of heavy loads.

The vehicle is fitted with 28-inch wheels, each of which has forty spokes, and especially large hubs. The tire equipment on the two front wheels is 2¾, and a 3-inch tire is used on the rear wheel. A low center of gravity is obtained with the underslung construction of the springs. The load in the body of the truck is carried on semi-elliptic springs, 1¾ inches wide. Another exclusive feature is the use of hardened steel bushings and steel pins on the spring shackles. These hardened steel bearings are practically indestructible and give great strength where it is of vital importance.

The truck was given its most severe tests last winter, when traveling conditions were at their worst and when any weakness, either in mechanical equipment or general construction, would be certain to show itself. On one occasion two men from the Cutler-Hammer Manufacturing Co., two members of the Harley-Davidson staff and three bags of sand were carried up all the hills in the vicinity of the plant without difficulty. When the men and the sand were weighed they tipped the beam at 1,120 pounds. This was considered a remarkable performance in view of the fact that the truck is designed to carry a load of 600 pounds.

D. C. Owen, postmaster in Milwaukee, is deeply interested in the utility of this type of truck, and at his request the Harley-Davidson company loaned him one of the outfits for a test recently. Fifty-one parcel post packages were delivered in two and a half

Harley-Davidson Truck Outfit Used in Delivery Service by J. F. McLelland.

Digitized by Google

hours on a route of 14.2 miles. This work would have consumed four and a half hours with a horse and wagon. Owing to the fact that it was necessary to make a second call at two places where the people were not at home, fifty-three stops were required. The post-office department figures two minutes for each stop, and the same length of time is required for stops whether delivery is made by horse and wagon or by the new method, so the gain in time between stops is as two to one with the motorcycle truck over old Dobbin.

William Harley handled the truck himself in this test, as he was desirous of learning what the government requires in parcel post delivery. Over the entire route he carried the regular parcel post man sitting on the box. In ordinary service, of course, this extra weight would not have to be handled. The greatest advantage of the motorcycle truck over the horse and wagon lies in the economy of operation. The motorcycle delivery vans now in service have demonstrated that when used for long runs they make from forty to forty-five miles on a gallon of fuel. The gasoline consumption on the test conducted for Postmaster Owen was a trifle less than half a gallon, and Mr. Harley figured that the trip was made on a basis of thirty-two miles to the gallon. The number of stops necessarily reduces the number of miles per gallon, but even figured at the low average of thirty-five miles per gallon, with an oil consumption at the rate of 250 miles per gallon, the operating cost would be about sixty cents per day.

One of the photographs accompanying this article shows the motorcycle truck used by J. F. McLelland in his Milwaukee Parcel Delivery Service. McLelland was formerly employed by the Harley-Davidson company to operate one of the trucks between the factory and the post-office, and he became so deeply impressed with the commercial possibilities of the vehicle that he decided to go into business himself. Accordingly, he placed one of the trucks in parcel delivery service and has made such rapid progress that he will put on one or two more as soon as he can get them.

TESTS IN WASHINGTON

WASHINGTON, D. C.—"If you want a thing well done, do it yourself" is evidently the motto of the Harely-Davidson organization. Bids have been called for by the Post Office Department for delivery machines of the three-wheeled type to be used in parcel post service, and W. S. Harley and Arthur Davidson both were in this city for an official test of the new Harley-Davidson motorcycle truck by postal officials.

Mr. Harley personally conducted the test. He drove through the city streets and out into the suburbs, taking all grades with apparent ease. Starting at the bottom of Mt. Pleasant hill, a grade considered very difficult even for 7 h. machines carrying one passenger, the Harley-Davidson truck made the ascent with ease. The start of the climb was from a standstill. Then four passengers were taken aboard the machine and the hill was climbed again without difficulty. Another test was made on the Thirty-fifth street hill in Washington. This hill ascends at a very sharp grade from M street, a business thoroughfare which is always crowded, preventing any attempt at a flying start. Several other successful tests were made and the post-office officials were favorably impressed. No contracts will be made at this time, but the bidders will be notified in the near future as to the decision of the department.

EASTERN F. A. M. ROUTE

Tourmaster Bushnell Tells How He Will Lead Big Squad from Chicago to National Assembly in Denver.

TOURMASTER BUSHNELL announces that plans for the tour of the Eastern F. A. M. division to the national convention in Denver have been completed, and that the itinerary will be as follows:

The Eastern branch will leave Chicago at noon of July 13, reaching De Kalb at night. Sterling will be the noon stop for the following day, and the riders will spend the night at Davenport. Iowa City will be the dinner control on July 15, and at night the party will check in at Des Moines.

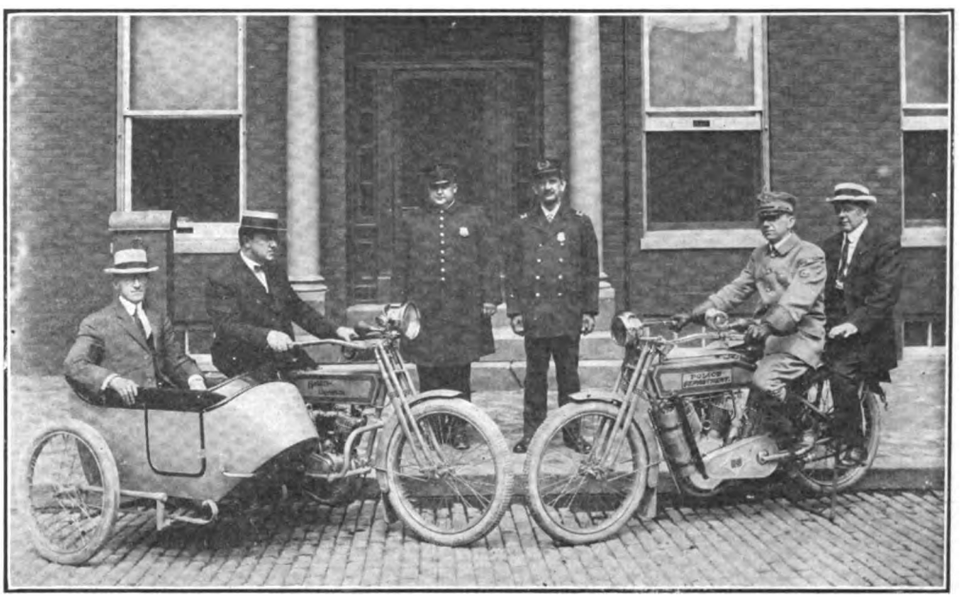
The division from Minnesota is scheduled to leave Minneapolis on the morning of the 14th, making its noon stop at Owatonna and remaining overnight at Mason City. On the 15th the party will have dinner at Marshalltown, arriving in Des Moines in the evening. Here Bushnell will take charge of both sections and the party will leave Des Moines on July 16, making Atlantic, Ia., the noon stop and Omaha the night rest.

The Dakota branch will leave Aberdeen, S. D., at noon of the 13th, and will remain at Watertown overnight and on the following day will make Brooklings the noon control and Sioux Falls the night stop. They will spend the next night at Sioux City and will reach Omaha the night of July 16, where they will join the main tour.

At Omaha there will be a parade in the evening and other forms of entertainment which will be provided by the Omaha Motorcycle Club, assisted by the Commercial Club. One of the big features of the Eastern division's program will be a banquet at the Standish Hotel, in Denver, on the evening of July 22.

BUFFALO CLUB'S CENTURY

A CENTURY run to Lockport, N. Y., was recently made by members of the Buffalo Motorcycle Club. The route led through Clarence, Akron, Middleport and Medina.



UP-TO-DATE OFFICIALS IN YORK

FROM C. W. Hoffman, 21 West Market street, York, Pa., comes the accompanying photograph of the Harley-Davidson machines in use by the local police department. The York police officials use the solo machine for general service and the sidecar outfit is frequently utilized to carry three men for an emergency call. The Mayor of York is seen seated in the sidecar. He is accustomed to use it on his inspection trips through the town and into the suburbs, especially for keeping in touch with highway repairs. Last year the York police department purchased two 4 h. Harley-Davidsons from H. O. Young, the local agent, and early in 1913 these were replaced by the two 8 h. twins shown in the picture. The sidecar is an "Autocrat."

ANOTHER ONE GONE

A 1912 7 h. Indian was stolen from Andrew Kraus, of Genesee street, Auburn, N. Y., on May 17. The machine was of the twin cylinder type, red, and the engine number is 74D739.

FAVORABLE RULING OBTAINED

THROUGH the efforts of P. E. Zimmerman, secretary of the Kansas Short Grass Club, a ruling has just been obtained from the Attorney General of Kansas which will save considerable money for motorists of the Sunflower State. The new ruling gives both automobilists and motorcyclists the right to operate a machine not equipped with a headlight. This benefits the riders who do no night touring, but who previously have been compelled by a sweeping regulation to equip their machines with a lighting system.

MOONLIGHT OUTING

A SQUAD of Harley-Davidson riders of Trenton, N. J., recently enjoyed a 50-mile moonlight jaunt. The riders gathered in front of the Harley-Davidson headquarters on North Broad street and, headed by James Fenton, an attache of the agency, they rode through Washington's Crossing, Pennington and Ewingville to Mercerville, and thence back to Trenton by way of Hamilton Square, Allentown, Yardville and White Horse.

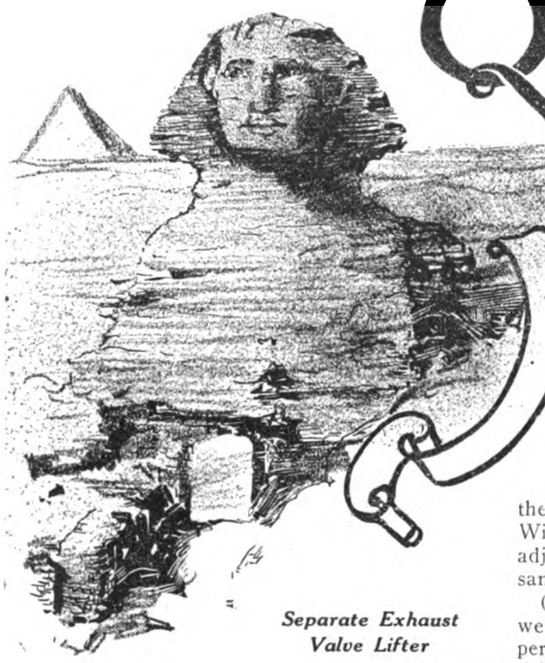
Questions & Answers



Separate Exhaust Valve Lifter

DONALD CARTER.—We have no official record as to when the separately-operated exhaust lifter was first applied to a motorcycle, but one of our Editors has used one on every machine that he has owned since 1906, fitting one when makers neglected to do so. We believe that the separate lifter was introduced on the N. S. U. motorcycle in 1906-07 into this country.

The separately-operated valve lifter enables the rider to set throttle and spark to the most advantageous positions for starting and leave them so set while he pedals over. At the proper moment, he lowers the valve and the motor starts off, there being no "feeling" for the proper position of the spark and repeated movements of the spark control are avoided. On taking a turn, the valve can be lifted and speed reduced without altering the setting of the controls, and on dropping the valve, the machine is again ready to resume its former pace. These are two of several reasons for using the separate lifter, given by our contributing Editors.

When fitted the lifter should be on the opposite side to the clutch control, so that the machine can be stopped either by pulling the clutch or lifting the valves in an emergency. It is perhaps better to have the throttle and lifter on the same bar rather than another arrangement, for either solo or passenger work.

Shock-Absorbing Systems

ITHACA RIDER.—We cannot recommend one make of shock-absorbing device to the detriment of another, but suggest that you find out from users of the various types just what satisfaction they have had in each case. A conscientious rider will, generally, give you some idea of where a device might, in his opinion, be improved upon, but most riders' opinions on the things which they do not use are highly prejudiced and usually confuse the inquirer rather than assist him in making a choice.

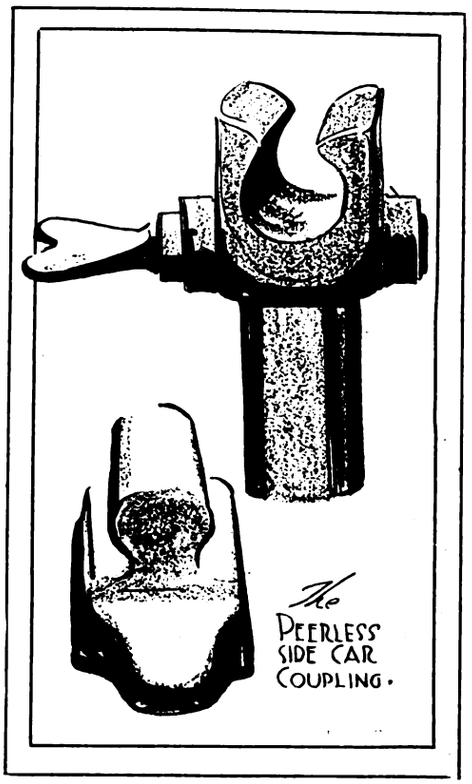
(2) You can regulate the tension of a spiral spring in several ways. One is to extend or reduce its "pitch": i. e., pull the spirals or coils apart or bring them closer together. With a spring acting in tension, extending its pitch reduces its power, while reducing the pitch increases the power. When a spring acts in compression, extending the pitch increases its power while reducing the pitch reduces its power. Another method of regulating the power is to compress the coils together by a screw and nut for increasing or by slacking off the nut for reducing the power of the spring. With care, then, two spiral springs can be adjusted so that the power of each will be the same.

(3) There are no means of regulating that we know of, short of annealing and re-tempering. Write the makers. The official English definition of a cyclecar is as follows:

"A cyclecar is a vehicle in which the cylinder capacity of its engine must not exceed 1,100 c. c. (67.1 cubic inches). The chassis weight must not exceed 6 cwt. (672 lbs.) inclusive of the weight of the tires, or in the case of those vehicles the bodies of which are not separable from the chassis, the total weight all on and ready for the road, but without fuel, oil or water, must not exceed 7 cwt. (784 lbs.)"

A Mysterious Leak

JOHN D. STRAKIN.—It is difficult to explain such a tire leakage as you refer to without seeing the tube and casing, but when a slow leak occurs there are several methods of procedure open to the rider. First examine all the old patches on the inner tube to ascertain that they are not permitting air to escape. If a leaky patch is found it should be removed and a new one used; attempts to "patch a patch" are rarely successful. If there are no patches on the tube the investigator may proceed at once to examine the valve, which may have pulled slightly away from the inner tube.



A New English Sidecar Product

Slow and mysterious leaks often give much trouble and arise from strange causes. Not long ago a Brooklyn (N. Y.) rider was bothered in this way by one of his tires. He finally removed the inner tube, inflated it and found that one section (about six inches long and two inches wide) bulged out like a toy balloon beyond the tube proper. This part was very thin and somewhat porous and it was natural to assume that the loss of air occurred at this point. In the instance referred to the defect was in the tube when purchased and there was no remedy for it. We are inclined to believe that your trouble will be located in or around the valve.

Maximum Speed

ARTHUR MORROW.—We fear that the 25-mile speed is the maximum speed of your machine in its present condition, unless you have it overhauled and the piston and timing clearances verified. We presume that the motor is a 2¼ horse type. If the motor does not, as you state, run over the 25-mile speed with regularity, attempts to force it faster will cause alternate firing (missing and resuming regular firing when the maximum speed is again attained). The re-timing of the exhaust valve might work for an increase of speed, say about five miles per hour, and a trial of this might help.

STRONG FAIRBURY LINE-UP

EIGHTY-FIVE members of the Fairbury (Ill.) Motorcycle Club recently made a run to Pontiac, and before getting under way they posed for the photographs which appear on the opposite page. The picture reached the Art Editor's desk in panoramic form, and it was found necessary to rearrange the grouping of the figures in order to bring them within mechanical requirements. A glance at the line-up of enthusiasts will show that Fairbury is not short on motorcycle spirit, and the turnout for the recent run is especially noteworthy because of threatening weather. The club officials are confident that no less than 125 riders would have figured in the picture, but for the fact that there were strong indications of rain.

When the squad arrived at Pontiac, John L. Purdum, the Harley-Davidson agent, played host at a dinner and the boys voted him one of the liveliest boosters they had ever met. Fairbury, by the way, claims to have the largest motorcycle squad in the state.

DEALER'S MACHINE STOLEN

GEORGE HUTER, agent for the Harley-Davidson in Dallas, Tex., reports the loss of a 1913 Harley-Davidson single. The machine was stolen on May 22. It was a belt-driven model equipped with Goodyear tires, four-chime exhaust whistle and cyclometer. A small leather box was strapped to the front forks. The engine number is 275-C, and the machine carried a Texas license, number 4246.

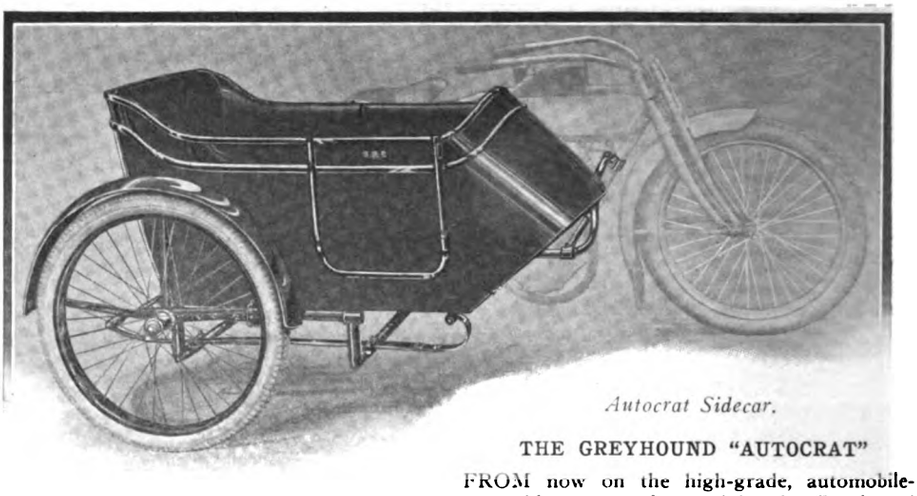
Busy Headquarters of the Reading Standard Sales Co. in Chicago.

TWO YALES STOLEN

ON SATURDAY night, June 14, a Yale twin, 1913 model, motor No. 21564, with lamp and tandem attachment, was stolen from in front of the Empire Theater, Toledo, Ohio. Any information regarding this should be directed to the Chief of Police, Perry Knapp, of Toledo.

A Yale twin, motor No. 21914, was stolen from C. A. MacDonald, at Buffalo, recently. Information concerning this machine should be addressed to the Consolidated Manufacturing Company, Toledo.

WORK has been started on a plant for the Alliance Rubber Company, on South Mahoning avenue, Alliance, O.



Autocrat Sidecar.

THE GREYHOUND "AUTOCRAT"

FROM now on the high-grade, automobile-type sidecar manufactured by the Greyhound Motor Company, of Buffalo, N. Y., will be sold under the trade name "Autocrat," instead of "Autocar." The Buffalo company chose the latter name when the manufacture of its improved third-wheel attachments was started, owing to the fact that lines of motor car construction were followed wherever possible, but it has recently been advised by an automobile manufacturing company that the name "Autocar" is copyrighted. The Greyhound folks then quickly hit upon the name "Autocrat," and all who are interested believe the change is for the better. The term Autocrat is descriptive of the high standing that has been attained by the Greyhound product, and also suggests the tone and luxurious equipment that help to distinguish this sidecar. The attachment will be enameled to match any standard machine. It sells for $95.

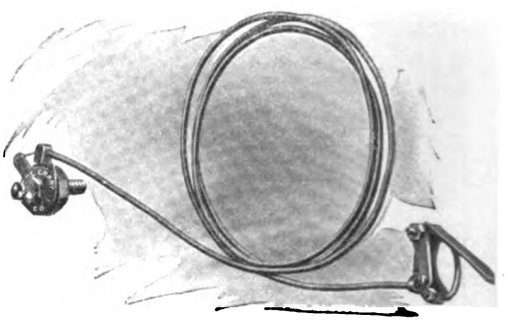
COLLECTOR RIDES POPE

W. C. STRIPLING, of Fort Worth, Texas, has used a Model H Pope lightweight in his collection service for over twelve months, during which time he says he has had occasion to test it thoroughly in all kinds of weather with the temperature ranging from 108 in the shade to 15 above, and to drive it through water, mud and dry sand. There have been no expenses for repairs other than punctures.

Mine Host Swenson Releasing a Fat Porker for the Pig Chase on "Indian Day."

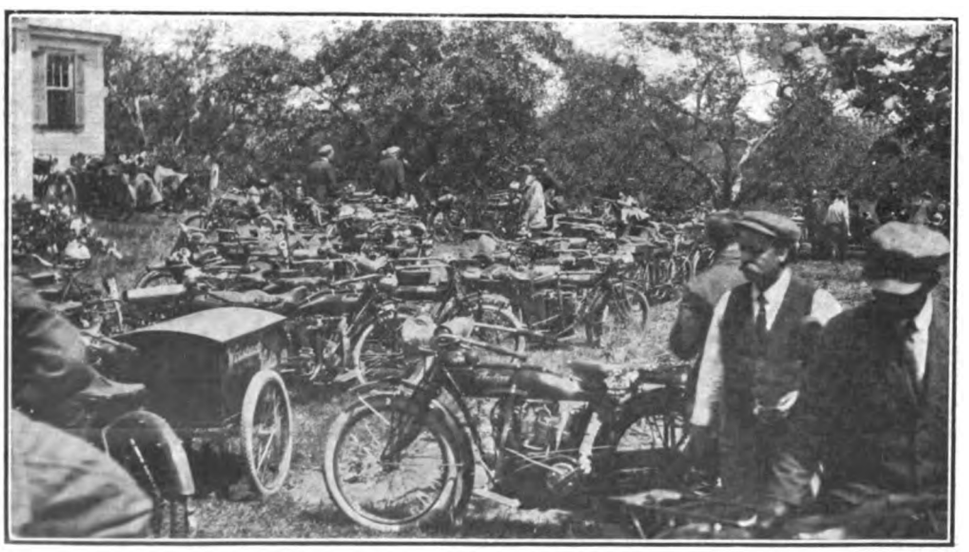
AIDING THE CARBURETER

ONE OF the latest and most interesting aids to the motorcyclist who strives consistently



to make the most of his mixture is an ingenious device known as the "Crary Gasoline Saver," for which the Harry Svensgaard Sales Corporation, of Detroit, Mich., has sole selling rights. This contrivance is connected to the intake pipe and is operated by a control lever on the handlebar, through a flexible cable. All that is necessary to attach the instrument is to drill a tiny hole in the intake pipe and screw in the saver. When fitted to a twin it is placed between the carbureter and the manifold.

The device has a small valve controlled by a spring that automatically cuts out the saver at low speeds, and it is further controlled by the handlebar lever, as may be found necessary when the machine is in operation. In this way the rider is enabled to make adjustments that conform to actual running conditions, instead of setting his carbureter while the mount is on the stand and taking a chance on having the adjustments meet the varied requirements of the road. The device sells for $2.50.



Machines at B. A. Swenson's Big Indian Outing Held Near Providence on June 21.

FIRST CARLOAD TO UTAH

UNUSUAL interest attaches to the accompanying photograph in view of the fact that it depicts the arrival in Salt Lake City of the first carload of motorcycles ever shipped to Utah. The machines were Indians, consigned to Lon Claflin, the Wigwam representative in Salt Lake. Claflin's growing business has forced him to take in a store adjoining his old headquarters and he now has about double the space formerly available. Claflin has ordered a second carload of Indians and expects to pass them out about as rapidly as he did the first carload.

IN LARGER QUARTERS

THE Nathan Novelty Manufacturing Company, of 88 Reade street, New York, is now established in its new offices at that address. With the additional floor space which the company is now using for its offices and salesroom, it has a plant that is large enough to take care of their greatly increased sales of automobile and motorcycle fabrics. The total floor area is about 20,000 square feet. The Nathan concern has been one of the most active and progressive in its field and, by producing a fine quality of goods and giving the trade unfailing attention, it has developed a rapid growth of business.

JOINS NICHOLS-FINN CO.

W. W. GARRISON, for two years associated with the advertising of the Hudson Motor Car Company, Detroit, Mich., has resigned from his office of publicity manager to connect himself with the Nichols-Finn Advertising Company, Chicago, Ill., and enter a broader field of advertising and merchandising.

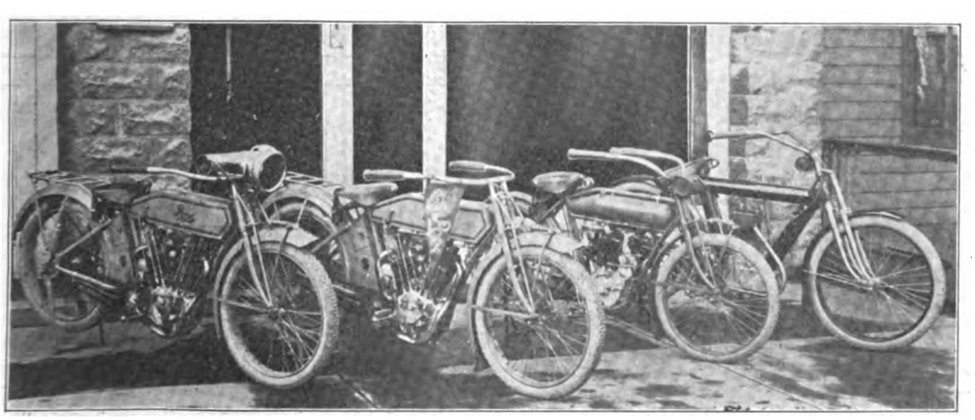
Mr. Garrison for several years was a member of the copy staff of Lord & Thomas Advertising Agency, Chicago. Before that he was engaged in newspaper work in Chicago, and is well known in newspaper circles.

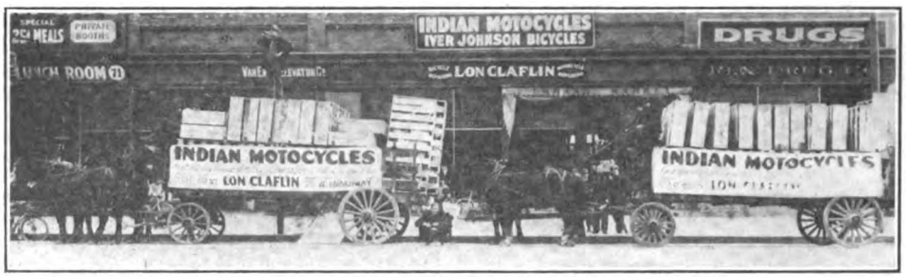
EIGHT AT A CLIP

L. S. CRANE, of Atlanta, Ga., recently landed what is said to be the largest single motorcycle order ever placed in that city when Mose Holland, purchasing agent for Fulton County, Ga., ordered eight Pope twins for Chief Rowan's county police force.

A POPE LINE-UP

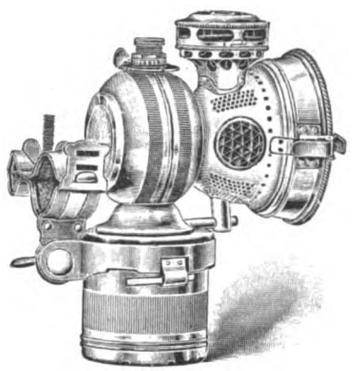
IN THE accompanying photograph is shown a line-up of machines in front of the headquarters of E. C. Morris, the hustling Pope agent in Long Branch, N. J. Morris reports a lively demand for the Pope in his district and states that the present season is the best on record in his territory.





IMPROVED LAMP MODEL

IN THE accompanying illustration is shown the improved Twentieth Century gas bicycle lamp, for which the Twentieth Century Mfg. Co., 420-22 Ogden street, Newark, N. J., is finding a remarkable demand. It suffices to state that the high standard of workmanship featured in its motorcycle lighting products and in its other bicycle lighting equipment is readily noticeable in the bicycle model No. 2. This lamp is made of brass, with nickel-plated finish, and stands seven inches in height. It weighs only 22 ounces, and has a carbide capacity of



five ounces. It is fitted with a parabola reflector. Special attention is called to the new carbide cup attachment and the new patent door catch.

The locking device of the former is exposed, unlike the catch of the old model—a twist to the left and the carbide cup is securely fastened. The new patent door catch works on the lever and spring principle and is most easily operated.

MORE HAVERFORD PROGRESS

THE Haverford Cycle Company, of Philadelphia, does not lay claim to being a matrimonial bureau, but when two of the Haverford clan take unto themselves wives within the short space of two weeks, it begins to look as if the company was developing a matrimonial side-line. The two benedicks are I. K. Sternberg and Thomas Kilroy.

E. & C. COMPANY INCORPORATED

INCORPORATION papers have been filed with the Secretary of State of Pennsylvania by the E. & C. Manufacturing Co., 1716 Ludlow street, Philadelphia. The company is capitalized at $20,000. The officers are Benjamin Craddock, president; Edward W. Donoghy, vice-president; George Donoghy, treasurer, and Herbert Culp, secretary. The business was formerly carried on under the name of Ernest & Craddock, with headquarters at Fifty-second and Filbert streets, Philadelphia.

A CORRECTION

THE price of the E. & C. chain idler is $1.50, and not $7.50, as stated in their advertisement of June 12. The manufacturers of this device, the E. & C. Manufacturing Company, of Philadelphia, state that the sale of the idler has been exceptionally good and that the prospects for a continued and increased demand are very bright.

A NEW GIRL AT HARLEY'S

WILLIAM HARLEY, of the Harley-Davidson Motor Co., is rejoicing over the arrival of a brand new baby girl at his home, and incidentally he is crowing over Walter Davidson whose second boy arrived two weeks ago. Harley insists that a girl and a boy make a better combination than two boys—and there you are. "Big Bill" Davidson is much amused by the chaffing because he has five children, with the boys and girls as evenly divided as is possible under the conditions.

FOREIGN SALES BRANCH

FROM the Carbo-Light Sales Company, Anderson, Ind., comes the statement that the foreign demand for Carbo-Light tanks has increased very rapidly of late, and that in order to care for this business properly the company has established a foreign sales department in New York City, under the management of Charles F. Lyngaas. The new Carbo-Light branch is located at 50 Church street, in the Hudson Terminal building.

NO SPLITDORF TROUBLE

FROM the Splitdorf Electrical Company comes the following announcement intended to correct erroneous impressions obtained from newspaper statements concerning the showing of its ignition equipment on cars in the recent Indianapolis Speedway race.

"Misleading newspaper reports, arising through lack of authoritative information as to ignition equipment on several cars in the Memorial Day 500-mile race at Indianapolis, have created the false impression that a car equipped with Splitdorf ignition lost an important position through ignition trouble. As a matter of fact, all cars in the race equipped with Splitdorf ignition came through without a suggestion of ignition trouble, their failure to win out being attributable to divers other causes."

TIBBITTS ON ADVERTISING

Goodrich Expert is Among the Principal Speakers at Big Convention of Advertising Clubs in Baltimore.

WITH "The Advertising Agency" as his subject, E. C. Tibbitts, advertising manager of the B. F. Goodrich Company, of Akron, delivered one of the most interesting addresses at the national convention of Associated Advertising Clubs of America, held recently in Baltimore, Md. Within the past year, the B. F. Goodrich Company have thoroughly investigated the services of the leading advertising agencies, both east and west, and, as a result, they are now utilizing the services of the Mahin Advertising Company of Chicago. Consequently, Mr. Tibbitts' opinion, based upon a conscientious investigation of the agency field, as well as upon his long experience with direct handling of the advertising of his company, is illuminative.

Mr. Tibbitts has one of the hardest advertising positions in the country, handling a mass of detail each day that would stagger the inexperienced man. The Goodrich Company sends out to its branches, service stations, agencies and customers a prodigious quantity of literature.

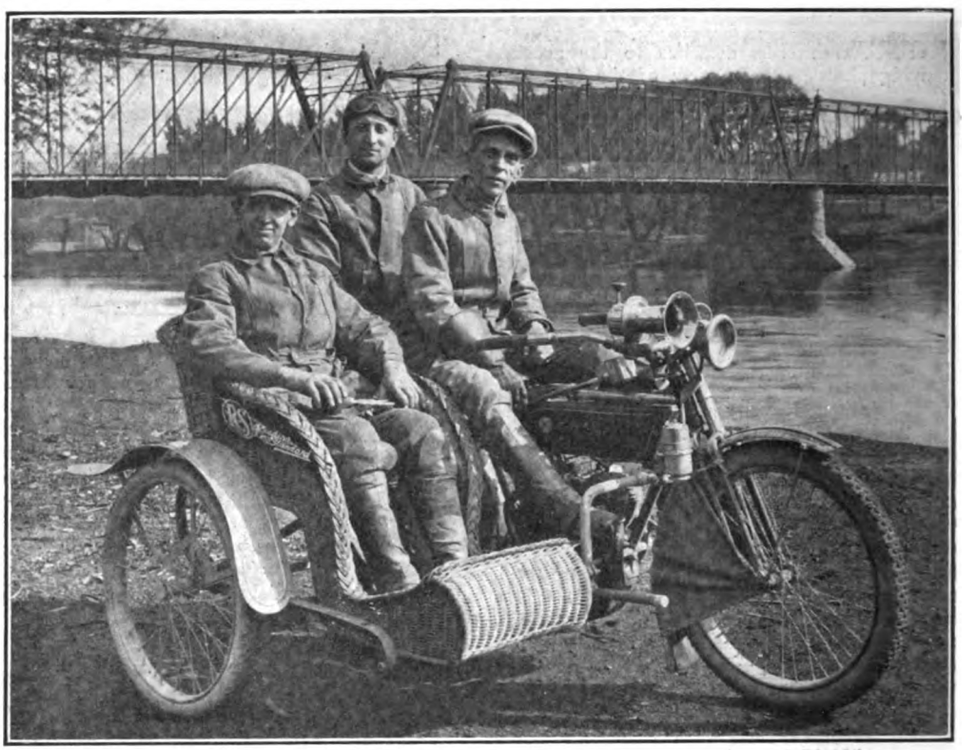
The fact that the Goodrich road signs, or guide posts, have been set up on over fifty thousand miles of American motor routes, and that road maps and route books covering every section of the country are prepared and mailed to motor tourists on request, gives a slight idea of the details in one department alone.

When the Adcraft Club was organized six months ago, Mr. Tibbitts was unanimously elected president, and the work outlined and accomplished by that club to date has shown the wisdom of their choice.

Mr. Tibbitts is a consistent and thorough advocate of accuracy, and exact honesty in advertising, as is evidenced by a phrase which is conspicuous in Goodrich advertising: "There is nothing in Goodrich Advertising that isn't in Goodrich Goods."

The Goodrich advertising campaign, in its entirety, was one of very few campaigns that the officials of the advertising clubs selected to be shown at the Baltimore Convention.

DANIEL FLORY, of Flory Brothers, Pope dealers in Lancaster, Pa., was a recent visitor at the plant of the Pope Manufacturing Company, in Westfield, Mass., and at the company's offices in Hartford, Conn.



JOHN H. TRAGGESSER, agent for Reading Standard motorcycles in Lancaster, Pa., appears on the machine in the accompanying photograph. The picture was taken upon Mr. Traggesser's arrival in Reading, when he visited the city recently to call at the Reading Standard factory. The two passengers who appear in the photo accompanied the Lancaster agent on his fifty-mile trip to Reading, and it is worthy of note that the machine carried the extra weight without a murmur. There are several stiff grades between Lancaster and Reading, but Traggesser has climbed them quite frequently of late with a sidecar passenger, and several times with two companions, as in the instance when the picture was taken. He reports unusual interest in sidecars this season in Lancaster and vicinity.

BIG HAVERFORD INCREASE

MAX SLADKIN, live-wire proprietor of the Haverford Cycle Company, reports that his business increase in the current year over the first six months of 1912 has been in excess of 100 per cent. The total business for the month of May nearly reached $200,000.

The new branch in Detroit is building up a nice business and Mr. Sladkin states he is very gratified with the strides this branch has made thus far.

"Business conditions look good to me, and I predict that 1914 will be a very big motorcycle year," Mr. Sladkin recently stated, "and I for one will double my contracts."

AURANDT DIES SUDDENLY

WILLIAM K. AURANDT, of Altoona, Pa., for years past a district manager for the Miami Cycle & Mfg. Co., of Middletown, Ohio, died of apoplexy at his home on June 13. Mr. Aurandt spent much of his time on the road boosting Miami interests throughout his territory, and was one of the most popular workers on the company's staff. While Mr. Aurandt had been in failing health for several weeks his condition was not believed to be serious, and the end came very suddenly. He was stricken while sitting in the dining room of his home and died in the arms of his wife before medical help arrived. Mr. Aurandt was in his fifty-second year.

Guy Campbell in Front of His Charles City (Iowa) Headquarters.

A BUSY IOWA AGENT

GUY W. CAMPBELL, Indian agent at Waterloo and Charles City, Iowa, appears on the machine in the accompanying photograph, with his wife in the sidecar. The picture was taken in front of Campbell's headquarters in Charles City. Campbell lives at Waterloo and he and his wife make the trip to Charles City once a week. The round trip is about 120 miles and it takes Campbell from two and a half to three hours to ride one way.

COUGHLIN—ROY

PRACTICALLY all the local motorcycling organizations were represented on June 25 at the marriage of Miss May Roy to Eugene Coughlin, the manager of the Riverside Motorcycle Garage, 533 West 110th street, New York. The ceremony took place at the home of the bride, 171 West 102nd street, at 8 p. m.

The Two Highest Scores

PEYTON READ and Thomas Callahan, both riding Harley-Davidson twins, were awarded 997 and 996 points respectively in the strenuous endurance run from East St. Louis, Ill., to Chester and return, May 11th.

The contest was so severe that no perfect scores were possible. The Harley-Davidson finished first and second and proved once more that Harley-Davidsons are just a little better than the best of the rest.

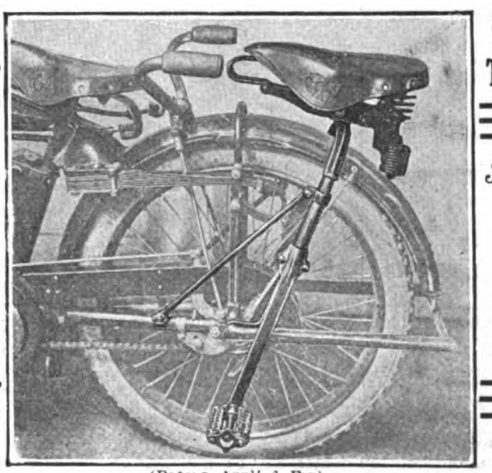
"E and C" Spring Tandem

Makes a Crony of old man Comfort



Makes every road a Boulevard

(Patent Applied For)

The "E & C" Spring Tandem is without question one of the strongest and most comfortable tandems ever built. It is especially designed for lady riders and will be found ideal for this purpose. Note carefully the following exclusive features:

1—Equipped with BOTH compression and recoil springs, absorbing all downward and upward shocks and vibrations.
2—Lowest possible saddle position—only 32 inches from ground to top of saddle.
3—Built of cast steel fittings and heavy-gauge tubing, and strongly reinforced at vital points
4—Has absolutely no side-sway, so common to most tandem attachments.
5—Equipped with handle bars, pedal foot-rests. Mesinger Standard No. 4 saddle. Nickel plate finish.
6—Pedal foot-rest leg made to swivel on tubing, which prevents snapping off in case of a fall.
7—Sold under guarantee of freedom from imperfections.

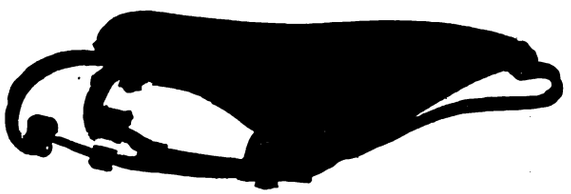
Mesinger



THE MESINGER "SUPERBA"

The Mesinger Saddle has done more to place the motorcycle upon a firm foundation as a supremely comfortable means of locomotion than any other feature of the two-wheeler now in use. Take away Mesinger comfort from a motorcycle and you have a poor thing indeed.

Mesinger Saddles
Most Comfort-Least Wear

Superba, Cavalry and Standard Saddles are the highest type of seating comfort ever devised for a motorcycle. Each has distinctive features of its own such as the leaf springs of the Superba, the broad, non-stretching low-saddle position of the Standard and the hand padded shape conforming construction of the Cavalry. The rider specifying any of the three Mesinger models is sure to be *more* than satisfied.

HERZ MAGNETO

HERZ MAGNETO is far superior to other Magnetos. In the official English test against 15 competitors, it was adjudged the most efficient Magneto of its size and weight by 25%.

HERZ MAGNETO is small and light, and absolutely protected against atmospheric conditions, dust and moisture. It was run completely submerged in water for 16 days at this winter's New York and Chicago Shows.

The strength and reliability of HERZ MAGNETO are attested by the fact that it is used by so many racing men.

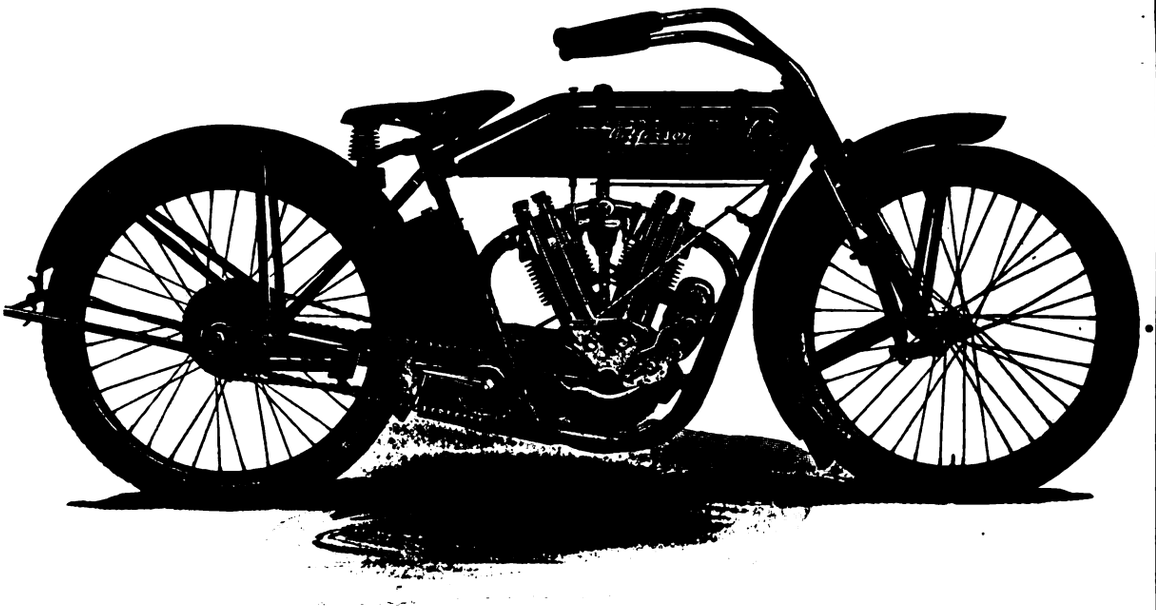
Handsome Is As Handsome Does



It's a beauty and no mistake, but don't judge by the looks alone. Note the automobile leaf springs, front and rear—the clean-cut powerful motor, with overhead valves, its perfect balancing. Note the absolute absence of superfluous parts, the simplicity of the grips, without clutch levers of any sort. Do you know what that stock motor can do, without special preparation or "tuning up" of any kind? Oh, only about 78 miles an hour! And without turning a hair. Yes, it's there with speed, but it's got service, too, in its make-up.

Our catalog tells the rest. Post a postal for it NOW.

Why Are Standard Products Invariably Specified?

Because years of conscientious manufacturing methods, coupled with an unusually high standard of quality, have built for STANDARD products an enviable reputation.

No manufacturer of any prominence but uses the

Diamond E Spokes and Standard Pedals

"STANDARD in NAME and QUALITY" are no empty words when applied to STANDARD PRODUCTS.

Diamond E Spokes and Pedals rank as the highest mark of perfection.

To liken a product to STANDARD is to bestow upon it high praise indeed.

The dealer who looks ahead will stock heavily with Standard Pedals and Diamond E Spokes and Nipples. The motorcycles that are not so equipped will invariably come to his shop for replacements and it is up to him to sustain his reputation for high-grade repair work by fitting Standard parts.

Easily carried, as the small bundles they make in their canvas bags take so little room that they could be carried in your pocket, when not in use, without inconvenience.

Order them from your dealer or write Dept. B for particulars

Weed Chain Tire Grip Co., 28 Moore St., New York

WEED ANTI-SKID CHAINS FOR MOTORCYCLES

You get the fattest spark with a J-M SPARK PLUG

This means that a larger percentage of the mixture is ignited—that you practically eliminate "back-fires" — and that you get *more power* out of your motor.

In a recent test, 58 horse-power was the greatest power developed by a motor using various *well-known* spark plugs. Yet when using J-M Plugs under exactly the same conditions, this motor *developed over 62 horse-power!*

J-M Spark Plug gives the fattest spark for three reasons: First, it is doubly insulated—no chance for leakage of current; second, the centre electrode offers the least resistance to the flow of current; and, third, the firing points are made of platinum-iridium and nickel-alloy and offer the greatest resistance to the current without becoming overheated themselves.

The J-M Spark Plug can be used either for battery or magneto ignition. Sold by most dealers. Shipped direct if your dealer doesn't sell it. Price, $1.00 each.

Write nearest Branch for Illustrated Booklet.

The Hagstrom Spark Plug

"It Shows What Your Motor Can Do"

No other spark plug brings out the true efficiency of your motor as does the Hagstrom. Its clean, crisp, sizzling spark finds every atom of charge in your motor's cylinders. It gives more power on less gasoline.

The porcelain and mica feature is an exclusive Hagstrom idea.

The electrodes are genuine imported "Meteor" metal—so expensive that few plug makers are using it.

The "Hagstrom" is the regular equipment on 1913 "Yales"—"Marvels"—"Indians" and "Velies."

Your dealer has them or will get them for you.

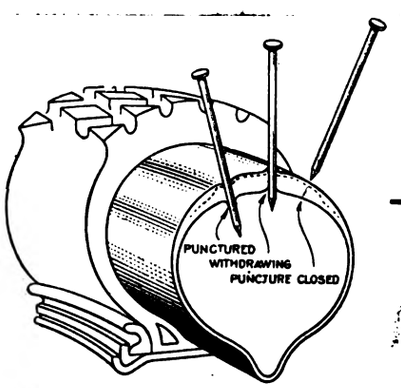
BARCO BRASS & JOINT CO., Chicago



Brown Scientific Non-Deflating Pneumatic Tube

AN AIR-FILLED MOTORCYCLE TUBE POSSESSING VERY UNUSUAL FEATURES:

First: It withstands a tread puncture without deflating the tube.
Second: The higher the pressure the tighter the puncture closes.
Third: It eliminates the risk of destroying casings by reason of punctures.
Fourth: The danger of loss of control of machine is removed.
Fifth: It assures you of not being obliged to repair a puncture on the road and gets you "there and back" on full tires.

AIR FILLED ONLY.

Punctures are self-closing by reason of a scientific but simple principle of construction.

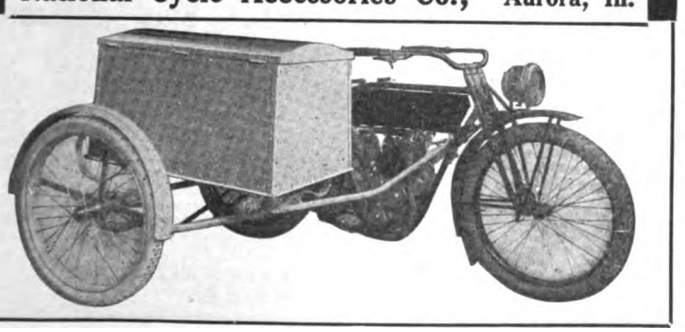
"ANDERS"

From both a business and pleasure standpoint, the Anders line of sidecars has tremendous opportunities. Their substantial yet graceful construction, the unique "rocker motion" which immediately puts them at the head of the line in the comfort class, and, finally, the reasonable price at which they are sold, makes them a proposition which no clear-thinking dealer can afford to overlook. Get our booklet today.

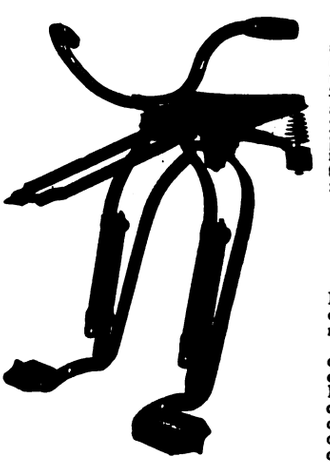
National Cycle Accessories Co., Aurora, Ill.



Simplicity—Comfort—Stability

The Empire Special

SPRING TANDEM



"IT FLOATS"

You wouldn't seriously consider purchasing a motorcycle that does not possess at least these three cardinal points. Then why permit a tandem attachment to be fitted on your machine, that has not proven to your complete satisfaction that it possesses these three characteristics in full measure? Here is

The Empire Special Spring Tandem

"IT FLOATS"

There is nothing about the Empire Special to get out of order. Simplicity is the keynote of its construction.

By a peculiar and ingenious invention, for which patents have been allowed, the Handle Bars and Pedals are caused to float with the saddle, insuring the maximum of comfort and smooth riding on the roughest of roads.

The famous Kelly No. 10 Adjustable Handle Bars are fitted on all Empire Specials.

Constructed of steel and no malleable parts, the Empire Special is practically indestructible.

Ask your dealer for our booklet. If he hasn't it, send us his name and you'll get one by return mail. The Empire's proof of superiority is in it.

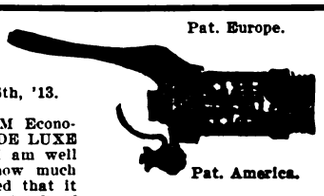
WHAT A DE LUXE OWNER SAYS ABOUT THE M&M ECONOMIZER



Pat. Europe.

Pat. America.

Portland, Oregon, June 6th, '13.

Moller Bros.

Gentlemen: In reference to the M&M Economizer which I installed on my 9 h. p. DE LUXE some time ago, I wish to state that I am well pleased with it. I cannot say just how much gasoline it will save, but I am satisfied that it saves some, although I have not kept track of it. It does all you claim for it in every way and certainly keeps the engine cooler than I thought any device could do.

Yours very truly, C. N. McDONALD, No. 674 Kerby St.

THE M&M IS GUARANTEED TO SAVE FROM 40 to 50% of gasoline, and increase the SPEED and POWER 20% with the same amount of gasoline and less carbon. It will also act as an air-brake, and is a very good carbureter adjuster. With the throttle set at twelve miles per hour, by opening the M&M, your mileage will be increased to eighteen or twenty miles, with the same amount of gasoline and less carbon.

PRICE OF THE M&M $1.25 Prepaid.

Write for our catalogue. BEWARE OF INFRINGEMENTS! Money refunded in 30 days if unsatisfactory.

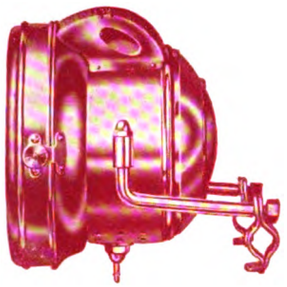
FEDERAL MOTORCYCLE TIRES

"EXTRA SERVICE"

Federal Rubber Manufacturing Co. - Milwaukee

Digitized by Google



PRICE $6.50

Diameter of door, 8 in. Diameter of lens, 6 in.
Candle power, 1500 Weight, 4 lbs. 2 oz.
Brackets per pair, $1.00 Bezel, 50c. extra

OLD SOL No. 8

POWER—EFFICIENCY—QUALITY

are the arguments for "Old Sol" Lamp No. 8.

You ride a twin because it has the reserve power to draw on.

By using this large lamp you obtain a light penetration to be secured in no other way. No. 8 is the most powerful motorcycle lamp made by 500 candle power.

No. 8 is equipped with ball pin hinges, special German lava burners, automobile type, heavy double thick door glasses, and specially ground Mangin mirror lenses. Bodies are made of heavy gauge brass, drawn from one piece of metal and door frames of special beaded construction to give them strength.

OLD SOL No. 9 TAIL LAMP

Price $1.50

Weight 8 oz. Diam. of body 3 inches.

Acetylene type. Regular generator can be used for operating. Tubing easily connected.

Lamp bracket "P" to bolt to mudguard, with bolts, included in listed prices.

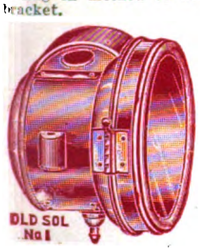
"OLD SOL" Tail Lamp No. 9 fills all requirements of the law in most localities.

OLD SOL Nos. 1 and 2

These were the first models of the "Old Sol" made.

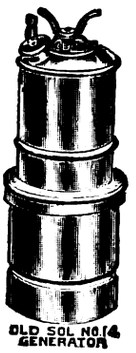
This coming season they will be equipped with 4½ in. ground Mangin mirror lenses, supplying an increased candle power over the previous models.

Lamps Nos. 1 and 2 are identical in size, the difference consisting in method of attaching to bracket.



PRICE $4.25.

Diameter of door, 6¼ in.
Diameter of lens, 4½ in.
Candle power, 600
Weight, 2 lbs.
Bezel, 50c. extra



OLD SOL GENERATOR No. 14

One-half the capacity of Generator No. 5, otherwise identical in construction except that bottom is held to top with special quick action fastener.

Height, 7 ins. Diameter, 2½ ins. Weight, 17 ozs.

Price $2.50

Bracket "G." For Generator No. 14. Attaches to any standard size frame tube.

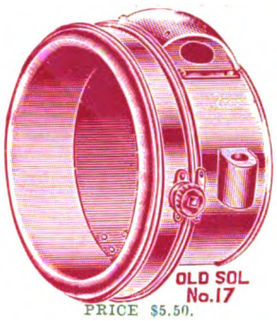
Weight 12 ozs.

Price $1.00

Bracket "I." For Generator No. 14. Attaches to any front or rear flat fork side.

Weight 1 lb.

Price $1.00



PRICE $5.50.

Diameter of door, 7 in. Diameter of lens, 5 in.
Candle power, 1000 Weight, 3 lbs.
Brackets per pair, $1.00 Bezel, 50c. extra

No. 17 is second to No. 8 in Power, Efficiency and Quality. It also has abundant power to draw on. It is next to the most powerful motorcycle light manufactured, being only exceeded by Old Sol No. 8. Like No. 8 and No. 1 and No. 2 it is equipped with ball pin hinges, special German lava burners, automobile type, heavy double thick doors, glasses, and specially ground Mangin mirror lenses. Body is made of heavy gauge brass, drawn from one piece of metal and door frames of special beaded construction to give them strength. Old Sol No. 17 differs from No. 8 in that it is smaller, lighter and less powerful.

OLD SOL ELECTRIC TAIL LAMP

MODEL NO. 20.

Description. Weight 22 ounces. Combination bracket holds number plate and allows white light from lamp to illuminate same. Red jewel on head throws rear signal. Burns from 20 to 25 hours intermittently. Supplied complete with 1 candle power bulb and battery No. 790.

Price $3.00.

The SCHICKEL Renews A Claim

Eight refinements clinch our claim to "The Master Motorcycle" for 1913.

1—**SCHICKEL SPRING SEAT POST WITH REAL SHOCK ABSORBERS** consists of few working parts and has a very neat appearance. Betters even the easy riding of the 1912 SCHICKEL.

2—**LARGER CYLINDER PASSAGES** insure the admission of a bigger charge and permit a quicker release of the burned gases. Results in marked increase in power and more rapid accelleration.

3—**IMPROVED DOUBLE JET CARBURETER** has but one adjustment and no moving parts. Starts motor easily even on very small throttle opening. More easily adjusted and withstands very rough handling. Extremely simple.

4—**ALUMINUM SHIELDS** fully enclose compression relief valve and air intake to carbureter. Results in greater cleanliness. Dust and foreign particles are excluded from carburetor and motor.

5—**CARBURETER DRAIN PIPE** takes care of overflow (due to priming), directs it to the ground and away from motor and frame parts. Results in increased cleanliness.

6—**IMPROVED DESIGN OF EXTENDED MUFFLER TAIL PIPE** reduces the exhaust sound to a minimum. The 1913 SCHICKEL is practically noiseless in its operation.

7—**NEW SUPPORT SPRING FOR SNAP UP STAND.** Stand can be released and dropped to the ground by a touch from the foot.

8—**SPRING CLIPS FOR SCHICKEL HINGED REAR MUDGUARD.** The hinged rear mudguard has been a SCHICKEL feature for three years. The new spring clips eliminate the possibility of a rattle resulting from wear.

THESE REFINEMENTS ON ALL FOUR MODELS FOR 1913.

Five Horse Power SCHICKEL, belt drive, $225.00
Five Horse Power SCHICKEL, chain drive, $230.00
SCHICKEL "BIG SIX," belt drive, $235.00

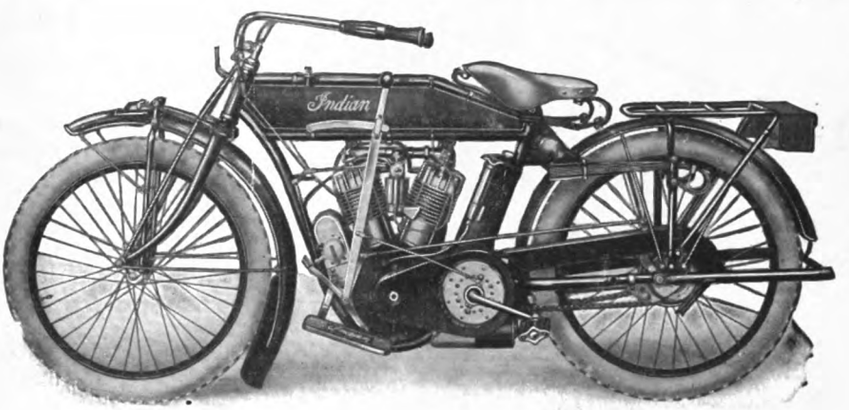
A STUDY IN CONTRASTS



The Indian Motocycle

To inspect the Indian in exhibition with its fellow motorcycles is the surest method of grasping its merits.

At the Motorcycle Show last week in New York, it was obvious to the most casual observer that the 1913 Indian had successfully solved the problem of **Comfort for the Rider.**

The new CRADLE SPRING FRAME marks the first radical departure from the inefficient and outworn principles of bicycle spring construction. It represents the successful application of the automobile system of spring suspension. This in a minor form has been in use on the Indian front fork for the past 4 years. The Indian is now leaf sprung fore and aft.

Another distinguishing comfort feature of the 1913 Indian, which will be appreciated by anyone who has ever ridden a motorcycle, is the equipment of footboards in addition to pedals, giving the rider the choice of two comfortable riding positions with the double brake action assured in each.

The Indian stood out at the Show as the ideal cycle motor—not as merely a motor-driven bicycle.

We will exhibit at the Motorcycle Manufacturers' Show at Chicago, February 3rd-8th.

THE HENDEE MFG. CO., Springfield, Mass.

The Choice of Multitudes

The Great Machine-Made Motorcycle Tires

Goodyear Motorcycle Tires have won their spurs.

Thousands of riders this year picked them for winners. Nor were they disappointed.

And next year other thousands will ride these tires with equal pleasure and profit.

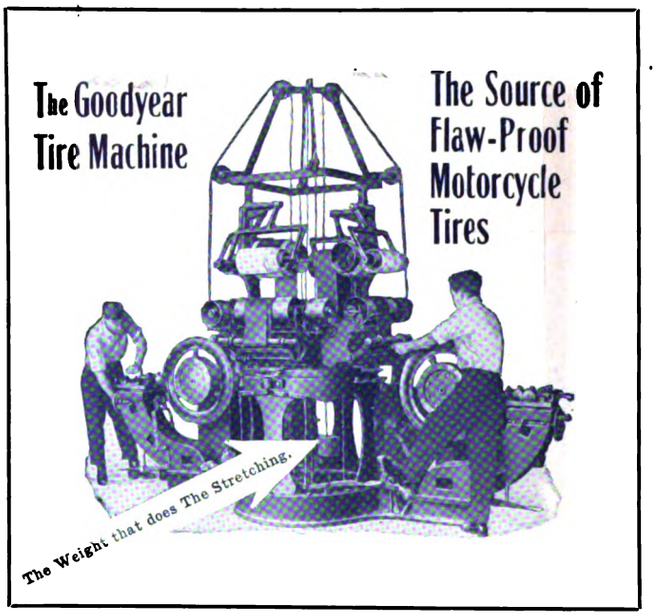
Goodyears are the most talked-of motorcycle tires today. They are the tires that countless tests prove the most durable in existence—the tires that 26 motorcycle makers have adopted for next year—the tires that hold every world's record, both amateur and professional.

These vastly more practical tires are saving motorcyclists large sums of money by banishing the expense and annoyance of endless tire troubles.

You will ride Goodyears inevitably! Why not now?

GOODYEAR

Motorcycle Tires



The Equal of Goodyear No-Rim-Cut Automobile Tires

All Goodyear Tires must measure up to the high standard of quality set by the now famous Goodyear No-Rim-Cut Automobile Tire.

So our motorcycle tires are built on Goodyear tire machines—the same machines that are building such spectacular durability into No-Rim-Cuts.

Flaw-Proof

These machines forever do away with the danger of flaws and weak spots that are bound to creep into the common tire—the tire that is stretched by hand.

They stretch on every layer of fabric with absolute uniformity of tension. Regardless of size or strength of the operator the tire machines do their work without the slightest variation.

The result is a tire that the world recognizes today as being the leader—a tire that has proved the most durable motorcycle tire in existence—a tire that gives added mileage—that reduces the danger of punctures and blow-outs, that minimizes the tire cost, that affords riders the very maximum of service at the price they pay for common tires.

5 Great Treads

There are five great treads—one for every road condition. Every one is a proved success—an actual money saver. Let us tell you all about them. Write us or go see the nearest dealer.

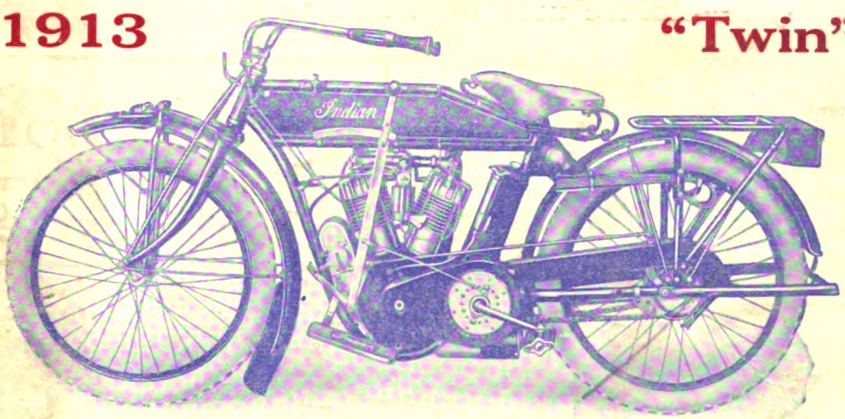
MOTORCYCLE ILLUSTRATED

THURSDAY, FEBRUARY 6, 1913

Issued Every Other Thursday by the Motorcycle Publishing Co., 51 Chambers St., New York

1913 **"Twin"**



The *Indian* Motocycle

The purchase of an Indian is an investment in the truest sense of the word. The reputation of the machine guarantees for it a higher second hand valuation than any other motorcycle.

You can therefore make no mistake in purchasing an Indian Twin. It is a motorcycle as complete and satisfying as the most exacting rider could demand. The prime essentials of Power, Speed, Flexibility, Comfort, Reliability and Ease of Control are positively superb in each instance.

The leading feature of the new Indian machines is the successful solution of the comfort problem. The Cradle Spring Frame, an exclusive Indian feature, has abolished vibration and jolting.

Ten other new features include the equipment of footboards in addition to pedals and an improved luggage carrier. There are further 29 minor improvements. No extra charge for any of the new features. No increase in prices.

Prices { **4 H. P. Single, $200** / **7 H. P. Twin, $250** } **f.o.b. Factory**

MOTORCYCLE ILLUSTRATED

THURSDAY, FEBRUARY 20, 1913

Issued Every Other Thursday by the Motorcycle Publishing Co., 51 Chambers St., New York

18 Months' Test Before Announcement!

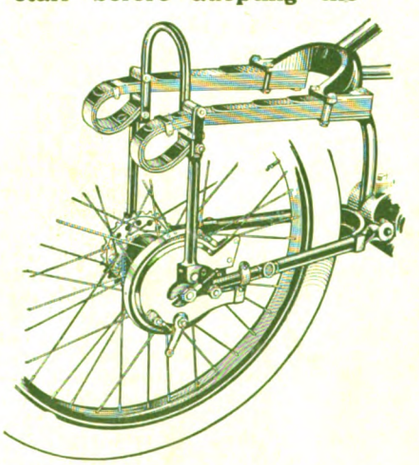
Positive Proof of Mechanical Correctness, Strength and Shock Absorbing Capacity was demanded and obtained by our engineering and experimental staff before adopting the

Cradle Spring Frame

OF THE

Indian

MOTOCYCLE



The sensation of the motorcycle world. Created intense interest at the Motorcycle Shows. Riders and others "saw it" at a glance. COMFORT AND STRENGTH simply stuck out all over it. Praise and enthusiastic recognition surged around it on all sides.

The Cradle Spring Frame is new only in its application to the rear of the machine. In a simpler form this spring system has been in use on the front fork of the Indian for the past 4 years. It has since been largely copied by other makers.

Patents are now pending on the Indian spring system and the trade is warned that no effort will be spared to protect our rights.

Thousands of 1913 Indians are already on the road. Without exception they are giving complete satisfaction. Ask any rider this question:

"Would you go back to the old bicycle spiral spring system?"

"Not on your life!" You may stake your bottom dollar on that reply.

Allegheny Motorcycle Club—Three out of every four on Goodyears.

Three Out of Every Four On Goodyear Motorcycle Tires

Wherever you find motorcyclists there you'll find a majority using Goodyear Motorcycle Tires.

Men have come to expect the utmost from these tires. They expect the utmost in durability and mileage—the utmost in easy riding qualities—the utmost in all around tire service. And very rarely are they disappointed.

So these tires continue to grow in popularity. The demand for Goodyears is increasing by leaps and bounds. At the present rate of increase, these tires, we figure, will, before the passing of the year 1913, equip as many machines as all other makes combined.

All because our 13 years' tire building experience has taught us how to build durability in motorcycle tires and because men have found it out.

The number of motorcycle makers to adopt these tires for 1913 has now advanced to 28.

Stop and Think

Whether you are an expert on tires or not you should consider the enormous preponderance of evidence in favor of Goodyears. Then you should be governed accordingly.

You should consider the wonderful increase in sales—five times greater than the sales of a year ago.

You should consider the splendid testimony of the 28 motorcycle manufacturers who have signified their approval by the adoption of Goodyears for their 1913 output.

You should consider the success of the tires on the race track where they have taken and today hold every world's amateur and professional record.

You should consider the character of the riders of Goodyears—the boys who by dint of headwork and daring have made possible the higher development of the motorcycle.

And last but not least you should consider the famous Goodyear No-Rim-Cut Automobile Tire—the wonderful foundation on which was built the success of these equally splendid and durable tires for motorcycles.

When you consider all these things—when in addition, you stop to reflect that these tires cost not a penny more than common hand-made tires, there can be but one thing left for you to do.

And that is to step lively to the nearest agent and let him explain **specifically** how these great motorcycle tires are sure to mean money in your pocket book and satisfaction in your heart.

Write for our new book on motorcycle tires. It will be sent you gratis, as soon as it comes from our printers.

MOTORCYCLE ILLUSTRATED

THURSDAY, MARCH 6, 1913

Issued Every Other Thursday by the Motorcycle Publishing Co., 51 Chambers St., New York

The Chain Transmission of Power in the

Indian Motocycle

THERE is no question about the superiority of the chain drive over all other systems. The first striking evidence of this is found in the performances of the Indian against machines with other forms of transmission. The second example, if such be needed, is exemplified in the switching of the manufacturers of belt-driven machines exclusively. The Indian method of application has proven eminently successful, in fact good enough for others to imitate. When combined with the Indian multiple disc clutch and the Indian countershaft system, the chain drive possesses all the advantages of the belt, none of its disadvantages and some superior points found in no other form of transmission. It is in wet weather that the chain drive shows up to best advantage. Being the most direct, with the most positive delivery, it is therefore the most efficient.

Both drive chains on the Indian are efficiently housed by guards, which protect the rider, the machine, and the chains, and lengthen the life of the latter, while at the same time in no way interfering with their ease of adjustment. Some of the greatest Indian victories with the chain have been won in the heaviest weather and roads.

20% Greater Inner Tube Strength For Motorcycle Tires. Goodyear BLUE STREAK Tubes To Effect Another Big Saving For Motorcyclists.

To the famous line of Goodyear Motorcycle Tires is now added a BLUE STREAK Tube.

Tests prove this tube 20% stronger than any tube hitherto used in regular tires.

That means a fifth more tube service and a saving to correspond. For these tubes cost no more than others.

Combine Goodyear Motorcycle Tires and Blue Streak Tubes and you get not only the service of 20% stronger and more enduring tubes, but also the lasting service—the extra mileage, of tires proved by hundreds of tests to be the most durable in existence.

How Men Came to Favor Goodyears

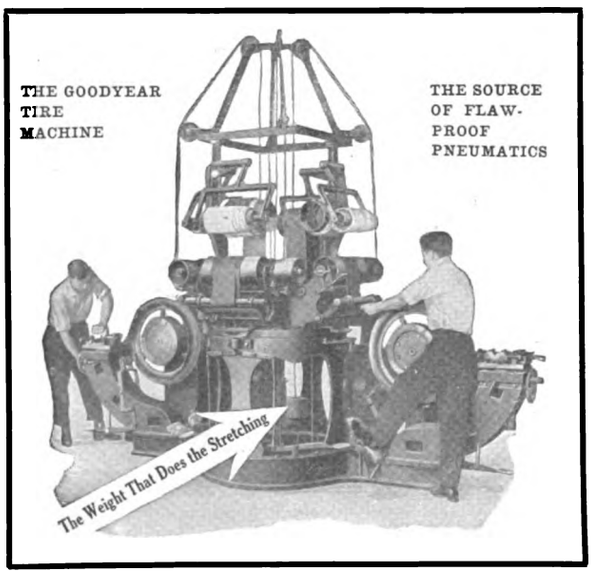
28 Motorcycle manufacturers have adopted Goodyears for their 1913 output. And it is only a question of time before the increasing demand for these more durable tires will win over the remaining few.

At the present rate of increase, we figure that Goodyears will tire nearly as many machines before the year is up as all other makes **combined.**

All because of the method by which we build endurance into these tires.

Goodyears are built on Tire Machines—one of the evolutions of our 14 years of tire-making experience.

These machines stretch on every layer of fabric with absolute uniformity of tension. Regardless of size or strength of the operator the tire machines do their work without the slightest variation.



GOODYEAR
AKRON, OHIO
Motorcycle Tires

The result is a tire that the world recognizes today as being the leader—a tire that has proved the most durable, that renders more mileage than all others, that reduces the danger of punctures and blow-outs, that cuts tire cost, that affords riders the very maximum of service at the price they pay for the common every-day sort of tires.

The Mechanical Oiler of the Indian Motocycle

The mechanical pump maintains a constant level of oil in the motor base, so the only concern the rider need have about lubrication is to keep a supply in the tank. All internal parts are lubricated by splash from the motor base. On the single cylinder engine the pump feeds its full charge to the gears, the oil in turn flowing thru the hollowed main shaft bearings to the pool in the motor base. On the twin the oil is first fed to a by-pass after it leaves the pump, then to the gears and thence on to the pool in the motor base.

Machine-Made Motorcycle Tires

A 20% Stronger Inner Tube

The BLUE STREAK TUBE! Goodyear Experts Effect Another Big Economy for Motorcyclists. One-fifth more tube service!

The most durable motorcycle tires on earth—and now the most durable **tubes!**

Tubes, by test, 20% stronger than all predecessors—tubes that stand for a fifth more wear and tear than all others—a regular BLUE STREAK Tube with all the thoroughbred markings of the original winners. Think of it! Tubes that have convinced **all** of their unquestionable superiority—tubes that hold every world's record.

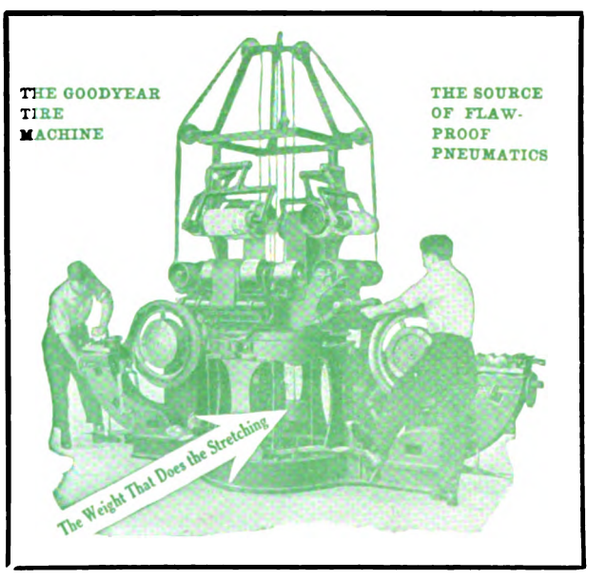
When you can get such dependability as this—

When you can combine with such tubes, tires that outsell and outserve all others—tires that 28 motorcycle makers have adopted this year—tires that men are turning to everywhere because of their almost priceless strength and endurance—

When you can combine such demonstrated **tube** quality and **tire**-quality as this, there would seem to be but one and only one course of action left open!

And that is—Go see the nearest Goodyear Dealer. Ride these tubes and tires yourself.

By Countless Tests the Most Durable Tires in Existence



By means of the Goodyear Tire Machine we build flaw-proof Motorcycle Tires—tires that practically put an end to tire troubles.

By means of tire testing machines we prove the greater durability of these tires.

In these tests, the treads of all make tires, our own included, are subjected to **metered** wear and tear; and as each tread gets the same test, the final condition of these treads tells which is the most durable—which tread will render most mileage.

Thus is proved our claim of greater durability—for Goodyears outwear all others. And the test is open to all.

Learn the many interesting and exclusive features of these tires. Each means money saved. Each means **improved service.** Ask your dealer about them today, or

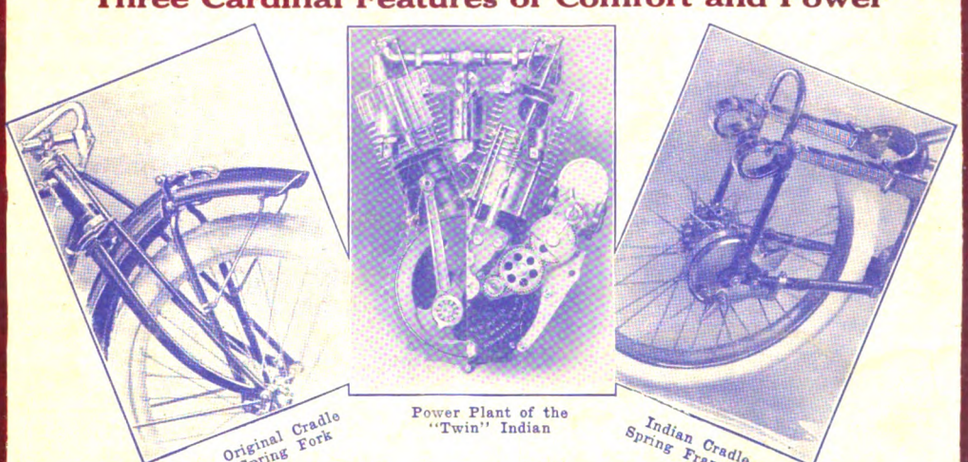
Three Cardinal Features of Comfort and Power



Original Cradle Spring Fork

Power Plant of the "Twin" Indian

Indian Cradle Spring Frame

The *Indian* Motocycle

The **Cradle Spring Frame** is an entirely new departure. The rider's comfort is no longer a compromise, no longer a dream. The two sets of leaf springs between which the rear wheel is suspended, absorb road shocks without jarring the rider, either directly or on the rebound. Vibration is prevented and the life of the machine is greatly lengthened. The **Front Fork,** in use on the Indian for the past 4 years, original with us and now widely copied, was the forerunner of the Cradle Spring Frame. The **Hedstrom Motor** is known far and wide as the most powerful and reliable gas engine of its size in the world. To its prowess the Indian Motocycle owes its greatest achievements on road and track. The **Chain Transmission, Foot Boards,** in addition to pedals and separate foot-control of Brake are other important power and comfort factors.

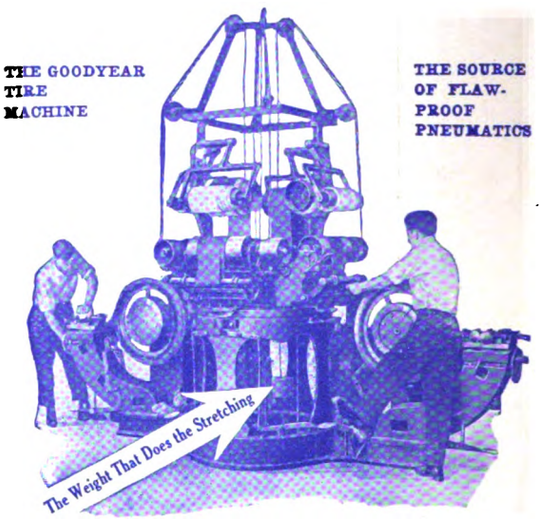
Machine-Made Motorcycle Tires

How Tire Dollars Buy Most Mileage

The time is here when men refuse to put up with mediocre tire service. They demand the tires that render the most in mileage and in service. Nothing but durable tires will do.
—A fact clearly demonstrated by the increasing demand for Goodyear Motorcycle Tires. These Tires divide tire cost—multiply the pleasures of motorcycling. Men have found this out. And today these tires outsell all others.



By Countless Tests the Most Durable Motorcycle Tires in Existence

How We Know

Tire testing machines tell the tale of Goodyear Supremacy.

On these machines we try out the treads of all motorcycle tires, our own included. As each tire gets the same treatment, the condition of the tire at the end of the test tells which is **best**—tells which tire has the most endurance in it.

Our tires must outwear all others or they **never** see the market.

Thus can we certify Goodyear Quality. And thus have these tires come into their own.

Tires for the 28

Twenty-eight motorcycle manufacturers have adopted Goodyears for their 1913 output. And it is only a question of time before the increasing demand for these more durable tires will win over the remaining few.

At the present rate of increase, we figure that Goodyears will tire nearly as many machines before the year is up as all other makes **combined.**

Why Goodyears Last

Goodyears are built on Tire Machines—one of the evolutions of our 14 years of tire-making experience.

These machines stretch on every layer of fabric with absolute uniformity of tension. Regardless of size and strength of the operator the tire machines do their work without the slightest variation.

In the finished product **no** too-loose plies, no too-tight plies. All are stretched at the same tension—all form a perfect unit of strength—all combine to make the tire **last.**

New Blue Streak Tubes.

With the strongest tires, Goodyear experts now offer the strongest tubes—**Blue Streak** tubes, 20% stronger than any tubes previously offered for regular road tires. That means one-fifth more wear. That means one-fifth more service with a saving to correspond.

If you want your tire dollars to pay biggest dividends in service and satisfaction, invest them in Goodyear Tubes and Goodyear Motorcycle Tires.

Running at Full Blast!

Our plant at Springfield, Mass., is now exerting its producing power to the utmost extent of its recently increased facilities, on the 1913 production of the

Indian Motocycle

Output for March: 5,348

The month of March alone has seen 5,348 machines made, sold and delivered. It is safe to state that, if the truth were known, these figures represent an output greater than that of the rest of the American motorcycle industry combined.

Since we began making deliveries last November, hundreds of riders in the South and the Pacific Coast have been giving the 1913 INDIAN exhaustive road tests to their complete satisfaction without exception. The new Comfort features have made a tremendous hit—especially the **Cradle Spring Frame.** We are receiving numerous letters from grateful riders on the fine riding quality of the 1913 INDIAN.

The INDIAN MOTOCYCLE is sold at a commonsense figure. Its prices are uniform. They do not vary at different dealers' in the same section of the country.

Machine-Made Motorcycle Tires

How Goodyears Predominate

THE REASON WHY

A canvass of 31 motorcycle clubs in 16 different states disclosed this astonishing fact:

An average of 80% of all members were riding Goodyear Motorcycle Tires.

Had we taken into consideration other reports which we were unable to verify the percentage would have gone close to 90.

The predominance of Goodyears in these 31 clubs in these 16 states surely may be taken to indicate a similar condition the country over. It points—and points conclusively—to a tire service that men must like.

That service is based upon durability—a quality that means greatest motorcycle efficiency—a quality that has raced Goodyears into the highest favor of most men.

Built For Service—On Tire Machines

HOW TIRE-MACHINES INSURE FLAW-FREEDOM

Goodyears are the tires built on tire-machines—one of the ingenious evolutions of our 14-years' tire-building experience.

These machines do away with a fatal fault common to tires of *hand* stretched variety. For in the course of construction on Goodyear Tire Machines, the plies of fabric are stretched by a *weight* which never varies.

Thus, in place of a tight ply here and a loose ply there, all plies are stretched on at an absolutely *uniform* tension. And since the tire is uniform in tension, it is uniform in strength and it *lasts!*

HOW WE TEST GOODYEAR DURABILITY

Goodyears are by countless tests the most durable tires in existence.

To make these tests we employ an *endurance machine* on which we try out the wearing qualities of every make of tire, our own included. If our tire doesn't outwear all the others, we persevere until we make one that does.

Thus can we certify the greater durability of our tires.

And thus have men come to prefer them to all others.

ADOPTED BY 28 MAKERS

Because men have come to know the durability of Goodyears, the sales of these tires have leaped skyward.

In 1911 our motorcycle business was in its infancy; 1912 saw a sensational increase; and with our tires now adopted by 28 motorcycle makers the year 1913 will, we figure, find in service almost as many Goodyears as all other makes *combined.*

HERE ARE BLUE STREAK TUBES

Goodyear BLUE STREAK Inner Tubes can now be had by all riders.

These tubes in composition and construction are identical with those used in Goodyear Blue Streak Racing Tires.

They test 20% stronger than any tubes hitherto offered for regular tire service.

You should know more about these saving tubes and tires for motorcycles.

MOTORCYCLE ILLUSTRATED

THURSDAY, MAY 1, 1913

Issued Every Other Thursday by the Motorcycle Publishing Co., 51 Chambers St., New York

What Is Horsepower?

Is it merely a selling term, a nominal caption placed beneath an illustration, or is it the actual "pulling power" a motor develops?

A stiff hill will answer these questions.

Remember the hill and your motorcycle are both governed by the same law of gravity and not by the philosophy of figures, and so-called horsepower means nothing in its scheme of existence. A manufacturer may rate his motor at whatever horsepower he pleases, **but he can not fool the hill,** nor can he affect or avoid the decision of that final court of appeal.

Take a motorcycle, accredited highest horsepower, rated by the usual **liberal** method, take

The *Indian* Motocycle

of 7 h. p. rated in the only true way, **by the cubic measurement of its piston displacement;** take these two machines, put them on a hill, and let that hill be the judge of horsepower.

This is not a new experiment. It is being tried every day, and every comparison proves the Indian method of gauging horsepower to be the true, genuine, indisputable method, and the other to be merely an abstract term applied to make an output sell.

Believing the cubic measurement of its piston displacement to be the only honest, rock-bottom method of rating an engine's horsepower, we adopted it in 1908, announcing the fact in our catalog of that year, and to **"Count the Indians on the Road"** is to appreciate conclusively the wisdom of our policy.

Machine-Made Motorcycle Tires

A Great and Saving Combination

Men demanding utmost tire service are turning to Goodyears. Durability has raced these tires into fame.

28 makers of motorcycles adopted them this year.

Figures show that an averaged 80% of all members in 31 motorcycle clubs in 16 states ride them to the exclusion of all others.

And now comes the Goodyear BLUE STREAK Tube—a tube by test 20% stronger than any hitherto made for every-day use.

That means one-fifth more Inner-tube service.

And combined with Goodyear Motorcycle tires, THAT means a bigger tire saving yet—one that few will care to overlook.

What 14 Years Means to Motorcyclists

Goodyear Motorcycle Tires are the outcome of 14 years' tire-building experience. Out of this experience came also the Goodyear No-Rim-Cut—the pleasure car tire of today—a tire with sales of over 2,000,000.

EQUAL OF KING OF AUTOMOBILE TIRES

All motordom is familiar with No-Rim-Cuts. Familiar with the years of testing and experimenting that went into their making. Familiar with the enormous saving they have meant for motorists.

And now motorcyclists get all the benefits of this experience—get tires proved by countless tests to be the most durable in existence—get tires equalling in quality the famous **No-Rim-Cut.**

TIRES WITHOUT A WEAKNESS

Goodyear Motorcycle Tires—like No-Rim-Cuts—are made flawproof on tire-machines.

These machines are patented, controlled by us. They afford the only known method by which the different plies of fabric forming the tire can be stretched on at a uniform tension.

This uniform tension means uniform strength—a complete elimination of weak spots due to plies stretched, some too tight; others too loose. These faults, common with **hand**-stretched tires, spell blow-outs, disaster and tire trouble.

TESTS THAT NONE CAN DISPUTE

We claim Goodyears to be the most durable tires made for motorcycles. So do the majority of riders. So, apparently, do the 28 manufacturers who have adopted them this year.

Figures based on mileage tests prove these claims.

To make the tests we used a metered endurance machine. It wears out four tires at a time under actual road conditions. It records the mileage rendered by each tire.

All makes of tires, our own included, are worn down on this machine and mileage compared. Figures tell the tale of Goodyear supremacy. And none can disprove them.

THE BLUE STREAK TUBE

With the most durable tires you can now have the most durable tubes. Blue Streak Tubes—the latest Goodyear development—are made of the same compound as used in Blue Streak Racing Tubes. And these hold every world's professional and amateur speed record for motorcycles.

KNOW MORE ABOUT GOODYEARS

There are many other things men ought to know about these saving tubes and tires that can't be explained here. Our book explains all and is **gratis.** You ought to have one!

The Motor Power to take you up!

The Brake Control to take you down!

The *Indian* Motocycle

1913 MODELS

The Indian Motocycle has always plenty of power in reserve beyond that necessary to take you over the road at 4 to 50 miles an hour. The powerful Indian motor and chain transmission will take you up any hill. You can start on any upgrade. The INDIAN FREE ENGINE CLUTCH not only lends extreme "flexibility" to the power transmitted to the rear wheel, but makes the Indian the "motorcycle with a thousand speeds."

Brake Control on the Indian is simple, positive and instantaneous. The INDIAN BAND BRAKE at the hub of the rear wheel can now be operated both by back pressure on the pedals and by the action of a foot lever close to left foot board. Steep roads falling away into winding valleys with "S" turns and railroad crossings need have no terrors for you.

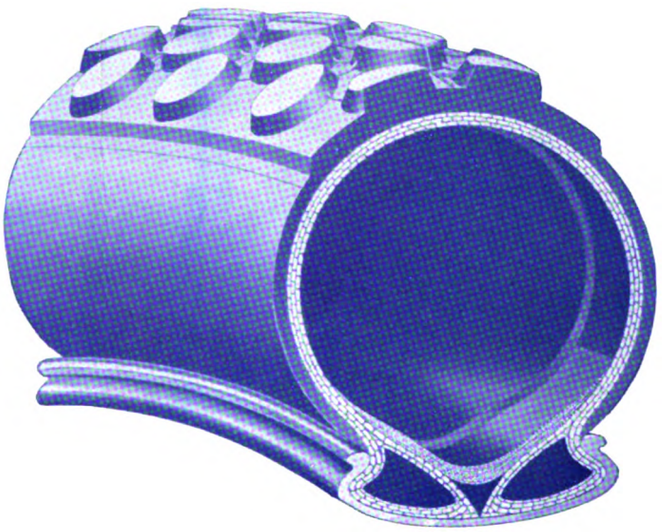
Machine-Made Motorcycle Tires

By Countless Tests The Most Durable Motorcycle Tires In Existence



Built by Goodyear Expert Makers of No-Rim-Cut Tires

Why Men Favor Goodyears

The wonderful success of **Goodyears,** the **machine-made motorcycle tires,** has proved profitable, both to dealers and riders. In less than three years these tires have won supremacy. They are the leading tires of today, outselling all other makes by a large majority.

Dealers are pleased with Goodyears, because they practically mean an end of tire-**complaints.**

Riders are pleased, because these tires mean **dependable tire service.**

So the sale of Goodyears continues to increase.

In one year the demand has multiplied five times over. At the present rate of increase, next year will find nearly as many machines fitted with Goodyears as with all other makes of tires combined.

Twenty-eight motorcycle manufacturers have adopted Goodyears for this year's output. And the great majority of riders the country over seem to have preferred them.

We have figures showing that an average of 80 per cent of the entire membership of thirty-one motorcycle clubs in sixteen different States ride Goodyears exclusively.

All, because of the **durability** built into these tires by Goodyear Tire Machines.

All, because these tires are made by men of experience —men who really know how to build motorcycle tires— men who have not only this tire, but the famous Goodyear No-Rim-Cut Automobile Tire to offer as proof of their ability.

Whether you sell tires or ride them, you ought to be interested in Goodyear service. It's a saving service. It means satisfied customers and satisfied riders. It means increased motorcycle efficiency.

You pay nothing extra for Goodyear service. A booklet, describing our Motorcycle Tires, explains why these tires can be sold at the popular price. May we send you a copy? Address

Issued Every Other Thursday by the Motorcycle Publishing Co., 51 Chambers St., New York

There's no more delightful or healthier way of making trips—week end or vacation—than on a 1913 Twin Cylinder

Indian Motocycle

IN the 1913 models of this famous motorcycle there is no such thing as vibration, jolting or jarring. The new CRADLE SPRING FRAME has completely solved the comfort problem. Even on very rough roads you skim along without discomfort. This absence of shaking greatly lengthens the life of the machine and makes motorcycling a true pastime.

The Indian's fame for Speed, Power and Endurance is already too well established to need comment. Control is simple and instantaneous. Low cost of up-keep is an important Indian feature.

GOODYEAR

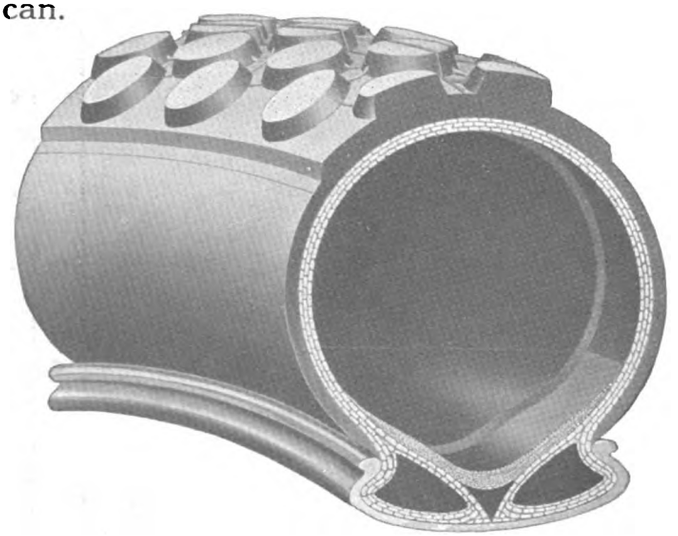
AKRON, OHIO

HALF you men riding **twins** don't actually NEED all that extra POWER. Ordinary service doesn't require it. But emergency MAY. So you GET it.

Why don't you carry the same policy into your tires?—get tires of Extra STRENGTH?

Why don't you tire your twin or your single with Goodyear Motorcycle Tires?

Goodyear Motorcycle Tires don't cost a penny more than others. Yet they are the most durable tires made for Motorcycles. How can YOU tell when that **extra strength,** that greater **resistance** against the rough of the road will be most **needed?** You can NOT Tell. NO rider can.



Machine-Made Motorcycle Tires

By Countless Comparative Tests
THE MOST DURABLE

So EVERY rider should ride the most durable tires.

And why are Goodyears most durable?

Because Goodyear experts build them to hold the same place in the motorcycle field that Goodyear No-Rim-Cuts hold in the pleasure car field. Build them on **machines**—not by **hand.** Build them to meet the conditions of today and to anticipate those of tomorrow. Build them as experience only can teach how to build tires. And Goodyear experts have been building tires for 14 years.

Next issue we are going to show you how you can prove Goodyear Superiority to your own satisfaction. Watch for our ad.

MOTORCYCLE ILLUSTRATED

THURSDAY, JUNE 12, 1913

Issued Every Other Thursday by the Motorcycle Publishing Co., 51 Chambers St., New York

Doesn't this picture hold a suggestion for vacation days?

The Motorcyclist often loses half the enjoyment of a pleasure trip when he goes alone. The beauty spots of summer land are made doubly enjoyable when he takes a congenial companion along.

The *Indian* Motocycle

WITH SIDE CAR

opens up an entirely new field for pleasure touring. A roomy, comfortable and handsome side car can now be attached to any of the 1913 Indian Motocycle models. A passenger can be taken over any good road as easily and comfortably as in an automobile.

The Indian Side Car is of the torpedo body type, luxuriously upholstered and handsomely finished. A high seat back insures the passenger's comfort. The car is ample in size, even for a large person.

As a motor vehicle for two people, the Indian Motocycle with Side Car represents an extraordinarily low outlay for running expenses, such as for tires, oil and gasoline.

The low hung frame is attached with strong connecting braces to the rigid parts of the motorcycle frame. Thus the cradle springs of the motorcycle, in conjunction with the leaf springs of the side car, absorb all road jars and vibrations.

Goodyear Machine-Made Motorcycle Tires — By Countless Tests the Most Durable.

Popularity Based on 3 Great and Unequalled Services

Ideal Factory Service for Dealers. Ideal Dealer's Service for Riders. Ideal Tire Service for ALL

Probably most readers of this paper are familiar with the facts surrounding the sensational popularity of Goodyear Motorcycle Tires.

These tires, scarcely heard of three years ago, now outsell all others. They have been adopted this year by 28 makers of motorcycles and by motorcycledom at large. 80% of the membership of 31 clubs in 16 different states use Goodyears. Goodyears predominate everywhere you go.

More mileage, better **tire service** is one reason for Goodyear popularity. The other reason is our factory-dealer **co-operation.** That means speedy, satisfactory adjustments between dealers and riders. And that means enthusiasm all along the line.

For it is our policy, not only to make the best tires we know how, but to stand back of these tires in every particular.

Thus only can our thousands of dealers give riders the kind of service we want them to have.

If you are interested in **tire service** let us tell you more about Goodyears. An interesting booklet on Motorcycle Tires yours for the asking.

The Most Durable Motorcycle Tires Made

Our Scientific Method of Proving What We Say

When you are told that Goodyears are the most durable tires in existence, you don't have to take anybody's word for it; you can see the proof with your own eyes.

This picture shows the scientific device by means of which the proof is **secured**—the Goodyear tire testing machine, one of the most interesting evolutions of our 14 years' tire building experience.

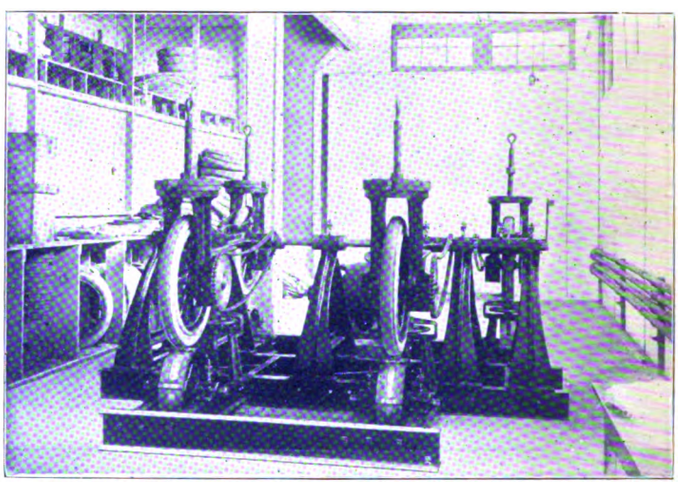
This machine tests out the durability of several tires at once. The tires to be tested are inflated, heavily loaded and forced down against rollers. The surface of the rollers is rough and irregular—equivalent to the worst road conditions imaginable.

Then the rollers begin to revolve at a tremendous rate. Contact wears down the tires—literally wears them down to threads. And a meter keeps tally on the mileage.

All makes of tires are subjected to the same test on this machine. The tire that renders the most mileage and shows the least wear is obviously the most durable tire. **And that tire is the Goodyear!**

This test is not only a proof of durability but of quality. Any flaw or mechanical imperfection MUST be uncovered if it exists.

Thus do we prove our claim of greater durability. Thus have Goodyear motorcycle tires **attained** and **maintained** their pre-eminence.



And thus have they become the popular tires—

—Tires ridden by an average of 80% of the membership of 31 clubs in 16 states—

—Tires adopted this year by 28 motorcycle manufacturers—

—Tires that are now found on more machines than all other makes combined.

If you want quality tire service, ask your dealer for Goodyears. He will be glad to sell them because he will make a friend of you. You will be satisfied because at no greater expense than you would pay for any tires, you will be guaranteeing yourself with the highest quality and most economical tire service yet known.

Write for our interesting book on motorcycle tires.

LOS ANGELES MOTORCYCLE CO., Inc.

Motorcycles and Supplies

Phone Broadway 4847 **843 South Spring St.**

Los Angeles, Cal., Dec. 24, 1912.

Graton & Knight Mfg. Co.,
Worcester, Mass.

Gentlemen:

We find that the Spartan "V" Belt is the best all round transmission so far produced for a twin cylinder motorcycle. It will out pull a chai. drive of the same power and gear on the steepest of hills if the rider possesses even ordinary mechanical horse sense. Ninety-seven per cent. of "V" Belt troubles are faults of the rider and not the transmission.

The average speed of the "V" Belt machine is greater than the average speed of the chain drive of the same gear. The repairs directly traceable to the transmission are three times as great with the chain as with the belt, either flat or "V" shaped.

Yours respectfully,
Los Angeles Motorcycle Co., Inc.

The Best Transmission

is what every rider wants—that transmission which is most efficient, most economical and most durable. The transmission which runs day in and day out without sound—which in construction is simplest and the repair, when necessary, most easily and rapidly effected.

That the belt form of transmission best fulfills these requirements has been proved by the most eminent authorities and endorsed by hundreds of riders and dealers—riders and dealers who have learned by experience—many of them by costly experiences.

Why don't you profit by their experience? Not only decide for the belt transmission, but be sure that it is a SPARTAN Belt you use and not those ordinary belts which are a positive detriment to the transmission efficiency of the best built machine on earth.

I. H. Whipple—"Whipple the Motorcycle Man" of Chicago—on a Pope Motorcycle with G. W. Hanson, his superintendent, in a Rogers Side Car.

Make Every Day Vacation!

You will not know all the joys of motorcycling until you attach a Rogers Motorcycle Side Car to your motorcycle. You can then take your friends on your Summer jaunts. Some one else can share your fun, thereby adding to your own enjoyment. You can make every day vacation time with a

Rogers Motorcycle Side Car

Prominent manufacturers, dealers and users of motorcycles enthusiastically endorse the Rogers. Read the endorsement reproduced here. You and your friends will be delighted with this car's sweeping, graceful automobile lines. The body is extremely roomy. Luxurious upholstery, special springs and the distinctive construction throughout conduce to real comfort and easy riding. The attachments are unfailing, holding the car in perfect alignment.

The Rogers can be attached to any motorcycle. The cost—$85.00—is low in comparison with the car's value.

Ask your dealer for the Rogers. If he does not have it, send your order to us. We will make speedy delivery. Don't delay. Write today.

Every live motorcycle dealer should order a Rogers demonstrating car. You can easily sell one with every motorcycle. Send your order today.

Chicago, June 12, 1913.

The Aermore Manufacturing Company,
153-155 West Michigan Street,
Chicago, Illinois.

Gentlemen:-

Having made and used the first motorcycle side car in Chicago, I feel qualified to write you regarding my opinion of the Rogers Motorcycle Side Car. I have always been an ardent advocate of this convenient, comfortable and economical form of vehicle. I have owned and operated about every make that has appeared. But I am compelled in all justice, to state that the "Rogers" is the most efficient, beautiful and comfortable side car ever produced. The attachments are positive - holding the side car in perfect alignment, so that it is possible to steer "hands off." The Rogers pleases me and my customers
